Oh dear do you not read? You have to add the skype username which is "ddosbuddy" and wait for the friends request to be accepted. After that you type in !help for a list of commands. Then there is a !ddos function. To use the DDos function you have to write "!ddos ip port seconds" and press enter!

Coffee™ - March 4, 2014, 9:49 am

Blatter - March 4, 2014, 12:14 pm
