Updates ++++++

Added Fake Junk Features such as Fake Classes, Subs, Modules.

Everyone should have a 2.9% difference in each stub.

Added a few more options to help ensure High Quality Loading.

GearCEO™ - March 6, 2014, 8:28 pm

Vouch for this byte[junior]. Known him for a long time and GLWS too.

SexyFuk™ - March 6, 2014, 8:32 pm

Thank you Sir, I have already had a few customers and they are very happy :D

doniuzas - March 6, 2014, 10:00 pm

hello its working with plasma http?

Cook John - March 6, 2014, 10:44 pm

Hi I don't understand. I saw "This will make your crypted file FUD longer" what does it mean ? how does the process work ? does it mean I will bind this to my crypted file ? Please clarify it to me because I need longer FUD too. Thanks ?

SexyFuk™ - March 6, 2014, 10:46 pm

Steps on how to keep you file FUD Longer.

Most people will scan and distribute your file via Virustotal and other distribution sites before executing your virus.

You Crypt your file with your crypter and upload it to directxex and then put the direct download link in my program.

My program creates a FUD Bin which you spread to people and it will download and execute when it downloads and executes it will download your virus via the direct link and install it. So therefore we are cutting out any scanning and distributing of your crypted file. So your file will stay FUD Longer.

oh thank you for answering sir. Does it work with plasma HTTP ?

SexyFuk™ - March 6, 2014, 11:07 pm

Yes it works with all products, this program will help keep your files FUD and if you need any help contact me, it may be some delay because I am moving homes right now.

Six-Nine - March 7, 2014, 6:00 am

How big stub size is it?

Kind regards,
~ Six-Nine?

SexyFuk™ - March 7, 2014, 8:52 am

It all depends on the options that you choose, normally around 3kb -18kb

Six-Nine - March 7, 2014, 8:59 am

(Mar 7, 2014 09:52 AM)bytef[junior] Wrote: [\[CITE\]](#) It all depends on the options that you choose, normally around 3kb -18kbHow much for source?

Kind regards,
~ Six-Nine?

SexyFuk™ - March 8, 2014, 10:28 am

I am not going to sell my source code as of now, I am currently running a business and have customers that have already purchased, I plan to run this for more than a year

?XilluX - March 8, 2014, 10:29 am

Another program, that had been coded in 10 minutes and is sold.

SexyFuk™ - March 8, 2014, 1:16 pm

I did not code this program in ten minutes, and I am sure that I and Nebula Loader are the only Downloaders being sold currently.

SexyFuk™ - March 9, 2014, 7:28 pm

In my program there are no fake features, and all the functions work correctly. I find it kind of rude to comment on my program when it seems that your'e being hypocritical.

eCoLoGy - March 9, 2014, 7:35 pm

I don't want to trash your sales thread but your downloader can be debugged and so it's possible to get the download link of the crypted file.

If not, its also possible to debug your file and see where it extracts the crypted file, so after that ppl just need to get it and scan on virustotal.

It won't make any effect.

I agree in 1 point. It might take longer to get detected in terms of spread, like spam detections and

so on.

But as soon as 1 person debugs it, your file will also be detected by most of av's.

Anyway correct me if I'm wrong, and as I said before I'm not trying to sales trash. Just wondering about this because I'm experienced with downloaders as I use 1 myself.

SexyFuk™ - March 9, 2014, 9:14 pm

I know but, most people will not debug a program, plus the link is encrypted/obfuscated. So it's hard. That is sales trashing though, just because you say "I don't want to trash your sales thread but"

nonA? - March 10, 2014, 1:29 pm

Do you give any vouch copies? this crypter seems very interesting, and price is interesting too :)
Im going to purchase this since couple upgraded members give vouches! :) But im interested to get vouch copy for 1day if you give those? :)

SexyFuk™ - March 10, 2014, 6:37 pm

I do not give vouches, but please remember "THIS IS NOT A CRYPTER" This is used to keep crypted files FUD longer, so a noob will scan my file instead of your crypted file, therefore it will keep you FUD Time Longer.

Cook John - March 11, 2014, 6:20 am

hmmm I have few questions

So if the user executes the stub created from helix loader what will happen while helix loader downloads my crpyted file ?

Some users executes the file more than once if they saw nothing is happening ? will it download the file twice and execute both or it will take only one action ? can you tell me what will happen ?

Six-Nine - March 11, 2014, 7:34 am

Cook John - March 13, 2014, 10:40 pm

I just purchased bronze package. I will do a review soon.

I died trying to make a custom loader for myself. I got alot of errors :P

BTW does it need Run as admin privilages? this is one of my main problems when I tried to make my own loader. It doesn't execute or download the file if it doesn't have admin privilages

SexyFuk™ - *March 14, 2014, 12:19 pm*

If you need any help let me know, probably because to add features that required Admin, unless you have a uac bypass.
