Ge.tt Quick Uploader

Hohai guys. Lately, I released a wrapper to upload on ShareSend. As many of you said, ShareSend isn't used by anyone here. Although the source was only made to help someone, I thought that it'd be cool to make another one using a famous hoster around there. That's why I chose Ge.tt.

Their official API requires an account, so I decided not to use it. I bypassed it using something that looks like an anonymous access token given in the cookies, so that regular user can upload on their website without having any account. To make it more handy, I decided to implement it into the windows right click context menu (little thanks to pathogenix).

There's nothing more to say, I hope this might be as useful for you as it is for me. See ya guys. ?

Oh wow!

This is pretty 'nifty' as the kool kids say these days, thanks for sharing!

Sajuuk - March 11, 2014, 2:51 pm

"Nifty."

The word "cool" has been around since, well, a long time, but I wouldn't consider this "cool". However the words "nifty" and "useful" do qualify for use in my opinion.

TrackPro+ - March 11, 2014, 2:52 pm

Nice. Will be using, thanks for the release and source man. :)

NoodleBot™ - March 11, 2014, 2:53 pm

Very handy. Thanks for this share, will come in handy when helping customers out or needing a quick link.

Weakky. - March 11, 2014, 3:18 pm

Thanks for the feedbacks guys, appreciated them! Feel free to suggest anything. And don't hesitate to report any bug you find.

AshleyUK - March 11, 2014, 3:20 pm

Could be very useful. Thanks!

-Ashley

programtesting28 - March 11, 2014, 6:03 pm

very simple and more easy to upload something files on my computer :D thanks !

Zettabit - March 11, 2014, 7:05 pm

Looks pretty nice. I think I'll actually find a use for this. Nice release.

CodeAssassin - March 13, 2014, 7:26 am

With how far you went with it, you may as well make a proper installer/uninstaller rather than register before use etc. none the less good work. IdB's class is a great place to learn webrequests :)

mullinupp - March 13, 2014, 9:10 am

This one TRANSLU6DE is a very useful tool for me and thanks alot for sharing the source aswell. Take care now

?XilluX - March 13, 2014, 9:12 am

Thanks for the share will look around the Source ! :D

SIM-1456245 - March 13, 2014, 10:30 am

This looks pretty nice. The coolest thing is the account bypass feature.

Gundam X - March 13, 2014, 10:31 am

This is amazing, and super useful thanks!

Weakky. - March 13, 2014, 11:47 am

Thanks for all the compliments guys, I do appreciate them!

Well, I find the installer much compact and easy to use this way. It doesn't throw you a bunch of useless form just to register a key in the regedit. And if you wanna unistall it, then you just have to launch it again, and it'll ask you for it. Regarding idB's class, I used it in most of my projects for a while, but I now try to use it as less as possible to make my code much lighter :).

MAXUSdev - March 13, 2014, 11:48 am

Nice work homie, it's glad to see new releases coming up haha

0x2765725 - March 13, 2014, 12:11 pm

Looks good will use it when i get back to home.

CodeAssassin - March 14, 2014, 10:54 am

Agreed i started out using it, then moved onto learning it properly, So i could build my own request from scratch, Great work again :)

Onin42 - March 14, 2014, 4:27 pm

Nice to see posting a new release!

Nice release like always, i await your next release.

Kill?Muvz - December 12, 2014, 7:18 am

freaking nice, going to download this.

Not sure if it was worth gravedigging, but thanks a bunch mate! ?

IAmNotHere - December 12, 2014, 1:58 pm

@ Weakky.

Awesome code!

Thank u very much!
