Thread: [what can I do on lan to mess with people over lan](#)

Magik_Kat - March 11, 2014, 5:08 pm

okay so my brothers been messing with me for the past 3 days or so and I decided to get back at him. he's always on his laptop watching movies playing games etc. is there anything I can do over lan to mess with his laptop, he does not have any antivirus software on his laptop so anything can pass through undetected. thanks ?

LogoiLab - March 11, 2014, 7:45 pm

you can modify routing tables to make all the pages they load load upside down(forget exactly how :() or you can go lookup how to use aireplay-ng as you can do lots of nasty stuff with it.

and your brother is an idiot not to run an AV on windows...the most vulnerable OS in the world

Lane_Stalker - March 11, 2014, 7:52 pm

Why don't you try out JDB ? I suggest you also learn Metasploit to 'mess with people over LAN'.

Goodies - March 11, 2014, 7:59 pm

A lot. Google "backtrack" and enjoy the wet dream whilst I weep for humanity.

I looked into backtrack turns out the project is finished and hey made a new one caalled kali

Failedattempt - March 11, 2014, 9:11 pm

You can just set up Teamviewer.

Simple and easy. They'll probably never know!
