Alert for: Adobe Flash Player users below version 12.0.0.77

Vulnerabilities: CVE-2014-0503 and CVE-2014-0504

Update: <http://get.adobe.com/flashplayer/>

Information:

Adobe has released security updates to address important vulnerabilities in Adobe Flash Player 12.0.0.70 and earlier versions for Windows and Macintosh and Adobe Flash Player 11.2.202.341 and earlier versions for Linux.

The new build intends to address following vulnerabilities in Adobe Flash Player: CVE-2014-0503, reported by security researcher, 'Masato Kinugawa', that lets attackers bypass the same-origin policy. Attackers can exploit this issue to access resources from another origin in the context of another domain. This can facilitate cross-site request-forgery attacks.

CVE-2014-0504, reported by 'Jordan Milne', that could be used to read the contents of the clipboard(). The Clipboard can be used to store data, such as text and images, but flaw could allow hacker to stuff malware URLs onto your clipboard.

Good thing I am still using the 2011 version then!

xhflhkeuhwguu34 - March 11, 2014, 9:53 pm

I have a fix for Flash that prevents every exploit on it.

Download [this](#) and save it to your Desktop.

Double click it.

Proceed with the uninstaller.

Make a thread with this guide, surely it will be stickied.

Jagster™ - March 12, 2014, 9:21 am

Yah seriously, if my movie streaming habits would let me I would have removed Flash Player ages ago. At least they have auto-updater ?

Yeah, this piece of shit Flash Player needs to be dead. I hope that HTML5 will fully replace Flash in the future.

It's in the process, but for now, many websites still uses Adobe Flash Player and are not fully converted to HTML5 yet.

He B TeMy - March 13, 2014, 7:16 pm

What's that hate towards Flash player? lol.

The fact that there's a security flaw in it every week. Not a minor one, one that can allow total remote control of the system, lol.

This.

And the fact that the Linux versions of it are buggy as hell, and Adobe stopped caring about Linux. No updates are being released, just security fixes. And hardware acceleration is glitchy on open-source GPU drivers.

With this addon, most YouTube videos play without Flash:

<https://addons.mozilla.org/pl/firefox/addon/youtube-all-html5/>

Many browsers includes their own version of Flash I guess, so you don't have to install it directly on your system. People that install it on HackForums are mostly people doing eWhoring and using VCW as it required Flash Player to be installed in order to use it with ManyCam.

DpzFAsq4UEK8 - March 14, 2014, 4:37 am

I'm not going to use Google Chrome just to have an up-to-date version of Flash.

The fact that I can't mine on its slaves is one (if I could maybe then you could remove my PS .dll's) ?

Other than that I love chome, I am not doing anything to grab the attention of authorities or anything that is worth their time.

This mostly. If you don't do anything illegal, you don't care about the botnet ?

DpzFAsq4UEK8 - March 14, 2014, 1:11 pm

I'm already a part of Google's botnet by using GMail...

I prefer Firefox because of better addons and it's more customizable.

I do like Firefox for web development too. I like Firebug, so easy to use.
