Thread: [\[ALL\] Web host thread design \(Incl. .PSD and icons\)](#)

Kaz'jin - March 13, 2014, 10:22 am

.PSD file is included so you can make changes at your own desire.

Icons are included if you wish to edit or add something.

Fonts are not included but Photoshop will let you know which fonts you are missing. You can > [Google](#) < them and download them.

File names are kept intact as some of the icons may require a linkback to their site in order to use these icons commercially (to gain profit).

You can view a virus scan report of the file [here](#). I'd rather be on the safe side, as well!

See the design in action, click on Click 2 View below!
