Quick Start to Using a Binder

(I apologize in advance for the pictures, I tried watermarking them before I cropped them, and it didn't turn out very well.)

What does a binder do?

It binds two or more files into one. You run one file, which runs all the files attached to it.

(If you were to bind Minecraft, and a virus together, you would get a single .exe which opens minecraft, and installs a virus whenever you double click it.)

How do you use one?

First we are going to need two things, an Icon Extracter, and a Binder.

I will be using BeCylconGrabber, and Celesty Binder.

Put those in a folder, along with whatever files you are going to bind together.

Spoiler [\(Click to View\)](#)

[/spoiler]

Open the Icon Grabber and navigate to the file you want the final .exe to look like.

(Minecraft in this example)

[spoiler]

[img]http://i35.photobucket.com/albums/d188/hpdarkman41/Binder/image_2_zpsdc4485be.png[/img]
]

Select the icon on the right and press "Save"

[img]http://i35.photobucket.com/albums/d188/hpdarkman41/Binder/image_3_zps2b2dcfe4.png[/img]

Chose a place to save the icon to. I will be using the same folder as out other stuff.

[img]http://i35.photobucket.com/albums/d188/hpdarkman41/Binder/image_4_zps9cd27254.png[/img]
]

Now we have everything in one folder.

Spoiler [\(Click to View\)](#)

[img]http://i35.photobucket.com/albums/d188/hpdarkman41/Binder/image_5_zps615065fe.png[/img]

Open the Celesty Binder folder and run "Celesty.exe"

Spoiler ([Click to View](#))

[img]http://i35.photobucket.com/albums/d188/hpdarkman41/Binder/image_6_zpse1e11d75.png[/img]

Now that Celesty is open, go to "Binder" the click "Add file..."

Spoiler ([Click to View](#))

[img]http://i35.photobucket.com/albums/d188/hpdarkman41/Binder/image_7_zpsd6ee8703.png[/img]

Select one of the files you want to bind together and click "Open"

(Go ahead and repeat this step for every file you want to bind together)

Spoiler ([Click to View](#))

[img]http://i35.photobucket.com/albums/d188/hpdarkman41/Binder/image_8_zps8daec79e.png[/img]

Now that you have selected all of the files, go to "Builder" the "Configure stub icon"

Spoiler ([Click to View](#))

[img]http://i35.photobucket.com/albums/d188/hpdarkman41/Binder/image_9_zpsc8df9f56.png[/img]

Click "Load icon"

Spoiler ([Click to View](#))

[img]http://i35.photobucket.com/albums/d188/hpdarkman41/Binder/image_10_zpsbd965809.png[/img]

Now select the .ico file we grabbed earlier.

Spoiler ([Click to View](#))

[img]http://i35.photobucket.com/albums/d188/hpdarkman41/Binder/image_11_zpsd26e73e2.png[/img]

Now go back to "Builder" and press "Build final stub"

Spoiler ([Click to View](#))

[img]http://i35.photobucket.com/albums/d188/hpdarkman41/Binder/image_12_zpsd44acd62.png[/img]

Name your file and save it somewhere.

Spoiler ([Click to View](#))

[img]http://i35.photobucket.com/albums/d188/hpdarkman41/Binder/image_13_zpsfc86a8b2.png[/img]

Now you have a file that is multiple files put together!

BojoHKs - March 15, 2014, 3:56 pm

Great Tutorial man thanks for helping me out

Van Klasse - March 15, 2014, 4:49 pm

Nice tutorial bro

-Justin ?

CallCenter43 - February 22, 2015, 1:13 pm

Thanks I binded it very easy now I just have to spoof the extension.

Thehackerguy1 - February 22, 2015, 1:18 pm

Thanks a lot bro, i will try this tutorial now.

FractumSeraph - February 22, 2015, 1:33 pm

This thread is over a year old. I'm going to lock the thread to prevent more gravedigging. If you want more information, head over to this link where I have a video tutorial:
