Thread: [Here is a clean GUI I made for a YLK bot](#)

Byte™ - March 16, 2014, 10:22 pm

I spent a little making a GUI for a bot I am creating, It will have lots of features for safety and everything. Just was wondering what you guys thought (How it looked etc)

Its a empty GUI with no code behind it so far, but I still have multiple settings to add and stuff (So the "Main" page looks blank, but "Option" page is good to go)

Coding Via C#

Why are you reposting this? Did you not like the responses you had? IDK what you want us to say you are using regular controls and there is no code behind the program anyone could make a GUI like this!

K-On! - March 16, 2014, 10:33 pm

You should really avoid blank spaces and make all the controls symmetrical (for instance, your tabcontainers are different width, probably want to change them to match?)

Otherwise, looking good. Just make the form smaller and try to fill up the blank spots and you're good2go

I was told I was posting in the wrong section (C++) and I didn't really to bother to check if he was wrong or not, and now I figured out he was... So the reason I reposted was because someone said "You do realize you posted this in the C++ section right? and told me to redo in the correct spot" so yeah. I was fine with the responses it was good feedback.

Thank you for the feedback, I appreciate it, because this is my first GUI I have ever made.

I mean the other post you have in this same section

<https://hackforums.net/showthread.php?tid=4119300>

Anyways good luck programming this.

Basic as fuck, it's just stock controls...

No code? This tells me that you must be new here.

Na, not new here, just new to coding... soooooo in other words.

New to this section I guess ;)

I'm really starting to be sick and tired of these recent threads that show nothing but a damn GUI. Whouah, you dropped a bunch of controls onto your form, congratz, what are you expecting from us? To give you a medal? And I don't even mention the fact that we've already seen this stuff a thousand time, but well, let's say you're just new. Anyway, please, stop posting threads without even one line of code. It's a CODING section, not your boring twitter feed.

Excuse myself for being that rude btw, but I had to start with someone.

Just wanted to say this. There is a reason why a lot of tutorials and books start off with console applications.
