I just made a three dollar Snapchat bomber.
Check it out!

Website is simple, Could use a little color correction when the login screen comes up and on the panel.

Other then that you have a Pretty decent bomber.

Coded well and works to the tee.

6/10

Inb4DDoS.

"It's not just you! <http://bomber.ml> looks down from here."
Didn't know I would need DDoS protection for a simple service.
(And now it's up!)

The website works nicely.. However, change the design.. It scares me ;)

Holy shit the user interface is hideous wow, I suggest making a flat theme for it.

That font is killing me, You mind changing it?
A flat theme would be great!

Any plans to bring the link back? It's showing up dead for me. Does anybody have a working alternative?
