Thread: [silent JDB vs regular JDB?](#)

4x4ever - March 20, 2014, 9:34 pm

what is the difference between those too?

Zher0 - March 20, 2014, 9:35 pm

Silent uses exploits to load the payload and execute it on the victims machine (no user interaction) usually targets older versions of Java, which are exploitable. Regular opens a prompt asking the user to "run" or "Cancel" (which as been patched in the latest Java updates).

4x4ever - March 20, 2014, 9:37 pm

recently visited a not so trusted site, asked me to run java, didnt press anything. am i infected?

? [\$(1000)\$] ? - March 21, 2014, 6:31 am

Doesnt matter any way JDB do not work any more unless the user has an old version of Java, Which 99% all have the NEW JAVA!
