Thread: [\[Help\] Connect database MySql](#)

M4d_V1r0uS - March 21, 2014, 8:34 am

Hello!

?

I have a DB sensitive data:

```
define('DB_NAME', '*****');  
define('DB_USER', '*****');  
define('DB_PASSWORD', '*****');  
define('DB_HOST', '*****');  
define('DB_CHARSET', '*****');  
define('DB_COLLATE', '');
```

How do I enter on database?

I use Kali Linux, no windows tool please.

Th3PonyWizard - March 21, 2014, 8:41 am

<http://dev.mysql.com/doc/refman/5.0/en/connecting.html>

download mysql, perform a connection. Applying proper privacy is recommended.

M4d_V1r0uS - March 21, 2014, 8:45 am

download mysql, perform a connection. Applying proper privacy is recommended.

Thanks brother.

Can i have a POC or tutorial?

I do not understand.

I must enter in the database and change admin password login ?

I do not understand.

I must enter in the database and change admin password login ?No. That explanation is beyond easy to understand.

RRRoooRRR - March 21, 2014, 10:00 am

Lmao seriously man help yourself, he basically just gave you everything you need, stop being a

slacker.

M4d_V1r0uS - March 21, 2014, 2:24 pm

```
mysql -h mysql02.db.kolst.it -u db_user -p  
enter password: ****
```

not work, not connect

hmm.. using kali and doesn't use metasploit (or armitage) to log into sql database... seems legit.

What's wrong with using [MySQL Client](#)? Why would his OS choice affect this choice?

can i use metasploit (or armitage) to log into sql database?

how?

SohnGottes - March 22, 2014, 1:33 am

Jesus christ, just download MySQL and MySQL Workbench and connect to your database. It's use is 110% self explanatory. <http://www.mysql.com/products/workbench/>

You might not be able to though, if they don't allow remote connections to it
