Thread: [How To Root Your Phone \[Nexus Phone/Tablets | Noob Friendly | KitKat 4.4.2\]](#)

No Effort - March 22, 2014, 6:15 am

Rooting is granting "super-user" access to a user meaning that they can have complete control over there Android. Now before we get into How to Root; I will talk about the advantages as well as calculated risks.

Advantages of Rooting-

1. Tons of New Apps only made for Rooted Phones available via Google Playstore
2. Really fast OS Updates so you can get the newest update before your Buddy
3. New Phone OS; Bored of Stock Android? well thanks to Rooting you can make your Nexus have Ubunutu, or any other ROM available in the market.
4. Free Wifi Hotspot! Why pay that extra \$10 to get a hotspot when you can download an app straight from the Google store and give your Laptop or anything else Wifi.
5. Better backup

Risks Involved -

- Your phone could get Bricked
- You could screw up your computer if you don't follow the steps right

Supported devices For This Root:

- Galaxy Nexus: GSM Models (both yakju and non-yakju builds)
- Galaxy Nexus: CDMA/LTE Verizon Models
- Galaxy Nexus: CDMA/LTE Sprint Models
- Nexus S: Worldwide, i9020t and i9023 Models
- Nexus S: 850MHz, i9020a Models
- Nexus S: Korea, m200 Models
- Nexus S 4G: d720 Models
- Nexus 7: Asus Tablet
- Nexus 7 3G: Asus Tablet
- Nexus 7 v2 (2013): Asus Tablet
- Nexus 7 v2 (2013) LTE: Asus Tablet
- Nexus 10: Samsung Tablet
- Nexus 4: LG Phone
- Nexus 5: LG Phone

NOTE: I DID THIS MYSELF AND IT WORKED FINE BE SURE TO FOLLOW THE TUTORIAL STEP BY STEP, THIS IS NOT MY VIDEO NOR DID I MAKE IT, ITS JUST THERE FOR THE BENEFIT OF THIS TUTORIAL. IF YOUR DEVICE IS NOT LISTED YOUR ARR ADVISED NOT TO GO ALONG WITH THIS TUTORIAL.
