Crypto™ - April 5, 2014, 1:18 am

[img]http://s27.postimg.org/5o7jqu103/omc.png[/img]

Omnicoin
Downloads:

Windows:

[Dropbox](#) (MD5 Checksum: CFAF7FD35E0741A4280F72147839001C)

[Mediafire](#)

[Mirror 1](#) (MD5 Checksum: 2F4882CE30B4F601B07ED0931F523094)

Mac:

[Dropbox](#) - Mac Binary submitted by Sh1eld & microsfot.

Source:

[Github](#)

[Github Zipball](#)

[Github Tarball](#)

For Linux, compile from the source by following the instructions listed in the [original thread](#) or by following [Xen0n's tutorial for compiling Omnicoin](#).

Configuration File

```
Code rpcuser=OmnicoinUserNameChangeMePls
rpcpassword=PaSswordDON'tKEePThisAsThis
addnode=192.99.42.164
addnode=192.99.42.206
addnode=192.99.42.238
addnode=204.44.122.123
rpcport=43555
server=1
daemon=1
```

Note: You do not need to have the rpcuser, rpcpassword, rpcport, server, or daemon lines. They are just there for example, and if you're just using it privately, it's strongly suggested that you remove them, leaving just the addnode lines.

Save this as omnicoin.conf and drop this into:

Windows: %AppData%\Omnicoin (Expanded to C:\Users\Username\AppData\Roaming\Omnicoin Usually)

Mac: ~/Library/Application Support/Omnicoi/

Linux: ~/.omnicoin

This should help to resolve connection issues!

FAQ

My wallet isn't syncing! Halp!

There are a couple possible fixes for this.

Fix 1: Run Omnicoin for the first time so that the Omnicoin data directory is created. After that, create the configuration file for OMC using the following code:

```
Code rpcuser=OmnicoiNUserNameChangeMePls
rpcpassword=PaSswordDON'tKEePThisAsThis
addnode=192.99.42.164
addnode=192.99.42.206
addnode=192.99.42.238
addnode=204.44.122.123
rpcport=43555
server=1
daemon=1
```

Note: You do not need to have the rpcuser, rpcpassword, rpcport, server, or daemon lines. They are just there for example, and if you're just using it privately, it's strongly suggested that you remove them, leaving just the addnode lines.

Save this as omnicoin.conf and drop this into:

Windows: %AppData%\OmnicoiN (Expanded to C:\Users\Username\AppData\Roaming\OmnicoiN Usually)

Mac: ~/Library/Application Support/OmnicoiN/

Linux: ~/.omnicoin

Fix 2: If you've already created the Omnicoin configuration file, there may be a problem with the synced blocks. Be sure to back up your wallet by copying the wallet.dat file to a secure location and/or use the "dumpprivkey <omnicoin address>" command from Help -> Debug Window -> Console, and saving the private keys somewhere safe. I personally recommend doing both. After that's done, delete the data directory where the omnicoin.conf file is located, and re-run the Omnicoin application to regenerate the data directory. Close it again, and drop the configuration file back in, along with your wallet.dat file (or import them via the console's "importprivkey <private key>" command) If it's still not syncing on the next run:

Fix 3: If it's only out of sync by less than 24 hours, it may be a system time issue. You will have to resynchronize your time server, and/or make sure you choose the right timezone. For Windows, this can be done by running 'w32tm /RESYNC'. If you get a connection error, try running the following snippet.

Code w32tm /UNREGISTER

w32tm /UNREGISTER

w32tm /REGISTER

Yes, two /UNREGISTER commands is indeed correct. (Thanks Cryptic™ for the tip)

Fix 4: You may have the wrong version of Omnicoin. Aurora's version was a nice start, but we've since nuked everything, so all old Omnicoin, and the entire blockchain is incompatible with the new version (Basically, if you downloaded it before April 5th, 2014, it's the wrong version). Either redownload it from this thread, or from the [Omnicoin Website](#), and repeat the data directory nuking from the previous fix, run the new binary, and go from there. That should fix it all up.

What's an Omnicoin worth?

Head on over to AllCrypt's [OMC Market](#), and check it out.

My wallet's constantly out of sync. What do I do?

Chances are, if it's constantly out of sync, you either aren't connected to functional nodes, in which case, see the first FAQ. However, this may also be due to a corrupted blockfile. In which case, you should back up your wallet.dat file from the data directory, and then delete the data directory entirely. After that's done, restart the Omnicoin-qt client, and it should start synchronizing. If it doesn't, close it down, and drop in the omnicoin.conf file to the recreated data directory along with your wallet.dat file. If it does work, still close it down, and drop your wallet.dat file back in, overwriting the one created by the program.

Specifications:

Name: OmniCoin (OMC)

Total Coins: 13,371,337

Block Time: 180 Seconds

Difficulty Retarget: Kimoto's Gravity Well, so every block.

Coins Per Block: 66.85

Reward Half: 100010 blocks, or roughly 208 days

RPC Ports:

RPC - 43555

P2P - 43556

Testnet - 43557

There is now an untested binary for Mac submitted. Please let me know how it functions.

Doctor Blue - April 11, 2014, 1:55 pm

(Apr 11, 2014 01:28 PM)Crypto™ Wrote: [\[CITE\]](#) There is now an untested binary for Mac submitted. Please let me know how it functions.

When you put a .app in a zip file you know the developer has never installed software on a Mac. Use a DMG file for gods sake :P

Just installed it on my development VM running 10.9.2.

I can confirm that it launches and receives coins as it should, confirmations pop up and wallet encryption works.

Importing private keys fails with the message "Error adding key to wallet (code -4).

Sending coins is yet to be tested once the 1 OMC I sent to it has been confirmed.

EDIT: Sending from encrypted wallet works as well. The address for the imported private key appeared in the address book, but even after a restart it doesn't appear in the receive coins tab.

Then will follow it up with an exchange site.

PirateLAD - April 13, 2014, 5:47 pm

Everyone doing giveaways have told me that they have sent the OMC to me etc however I am receiving no transactions could this be a problem?

Happeh - April 13, 2014, 6:28 pm

I have a VPS with OVH currently that is doing nothing. I wanted to setup a pool but I'm too much of a beginner right now so its out of my league, I will however keep practising.

But until then its just collecting dust so if any current pool owners want to use it as a backup server I'd be happy to donate or even if someone needs one and wants to partner up on something I'd be cool, just give me a shout.

Doctor Blue - April 14, 2014, 1:43 am

(Apr 13, 2014 05:47 PM)PirateLAD Wrote: [\[CITE\]](#) Everyone doing giveaways have told me that they have sent the OMC to me etc however I am receiving no transactions could this be a problem?
Did you add a config file in %APPDATA% with the three nodes?

PirateLAD - April 14, 2014, 8:22 am

(Apr 14, 2014 01:43 AM)Doctor Blue Wrote: [\[CITE\]](#) Did you add a config file in %APPDATA% with the three nodes?

No I dont think I did sir, please could you give me some instructions on how to do this? I have had lots of people sending me OMC so I dont want it to go to waste

Doctor Blue - April 14, 2014, 8:27 am

(Apr 14, 2014 08:22 AM)PirateLAD Wrote: [\[CITE\]](#) No I dont think I did sir, please could you give me some instructions on how to do this? I have had lots of people sending me OMC so I dont want it to go to waste

Press Win + R to open up the run dialog.

Type in "notepad %APPDATA%\Omnicoin\omnicoin.conf" and press enter.

An empty file will pop up in notepad, write the following

Code addnode=172.245.39.121

addnode=151.228.222.25

addnode=198.100.155.248

Save the file, close notepad and restart your wallet.

(Apr 24, 2014 10:34 AM)Running1 Wrote: [\[CITE\]](#) Not to complain but this domain needs to be bought before launching publicly to all that don't know about HF.

<http://www.omnicoin.com/>

If you want to pay hundreds of dollars for a silly domain name, by all means go ahead. I personally think it's a waste. It's not like bitcoin.com is being used for anything interesting either (Except referencing 3 bitcoin sites)

Crypto™ - April 25, 2014, 4:05 am

I should be all caught up. Post here if I missed something.

<http://www.omnicoin.com/>

Yeah, no. First off, this isn't a public coin. This is a community coin for HF. Even though we do have a website, the majority of development will be focused here. Second off, it's already launched. It's been out for 19 days, 18 hours and 4 minutes as of right now. Finally, even if we were focusing on the public, it'd likely kill us financially to go after an established domain like that. There are plenty of other gTLDs, or gccTLDs (Generic/Generic Country Code) out there. .cc and .pw are plenty to take care of shit, without spending hundred, if not thousands attempting to acquire the .com.

If you move the executable out of the folder with the DLLs, it won't be able to find them and link them to it. However, you could always register them by following the instructions [here](#).

Otherwise, the simple solution is to just drop it back into the folder with the DLLs, or move the DLLs to the executable.

Erhm.

It's safer to just disable the RPC if you don't need it.

Strip all the rpc* lines from the config and you'll be good, it's only needed for solo mining or servers needing to interface with the RPC.

This software is so poorly coded, in order to build it properly, I had to make several changes to the config files as well as some of the code.

Let me just say: Fix your build instructions.

Xen0n's isn't guaranteed to work for the daemon, and the official one is out-dated. For newer versions of qmake it may complain unless put into project mode.

>.>

Here's the FAILING build. Notice anything?

I'll write up some new ones soon. I know the problem with that build though. The leveldb libs have to be compiled seperately. I'll work on rolling the builds together if possible, or at the very least, making a shell script to get that working. That should have been included in the build instructions, but since it wasn't I'll post the fix here.

From the src/ directory:

Code cd leveldb/

chmod +x build_*

make

make libleveldb.a libmemenv.a

After that, the make should succeed.

However, outside of making sure the lib and include directories are updated in the makefile, there really shouldn't be any configuration modifications.

As for different QT versions, that's always a bitch, no doubt about it.

Feel free to contact me via PM or via Skype if there were any other problems you had.

I'll be talking with you on Skype about this! 'Twould be awesome to have!

Red™ - May 3, 2014, 9:46 am

Is it strange that I dont have an AppData folder and cant find it nowhere?

Where would I find the Omnicoin Username and Password so that I could edit the config file?

Doctor Blue - May 3, 2014, 1:11 pm

(May 3, 2014 06:15 AM)vitafortis Wrote: [\[CITE\]](#) This software is so poorly coded, in order to build it properly, I had to make several changes to the config files as well as some of the code.

Let me just say: Fix your build instructions.

Xen0n's isn't guaranteed to work for the daemon, and the official one is out-dated. For newer versions of qmake it may complain unless put into project mode.

>.>

Here's the FAILING build. Notice anything?

<http://pastebin.com/uej4hvY7>

I think I've tried to get it corrected everywhere I see it, but it's not helping much. Xen0n never finished his guide.

With that being said, it's not really the coin daemon's responsibility to install dependencies, that's usually the user's :)

Still, I agree the instructions need to be clarified.

Aceman - May 3, 2014, 1:20 pm

Crypto™ - May 3, 2014, 3:23 pm

(May 3, 2014 09:46 AM)Red™ Wrote: [\[CITE\]](#) Is it strange that I dont have an AppData folder and cant find it nowhere?

Where would I find the Omnicoin Username and Password so that I could edit the config file?
Windows: %AppData%\Omnicoin (Expanded to C:\Users\Username\AppData\Roaming\Omnicoin Usually)
Mac: ~/Library/Application Support/Omnicoin/
Linux: ~/.omnicoin

If you're looking directly for the AppData folder, it's hidden from normal view.

If you type in %APPDATA% into the address bar of Windows Explorer, it will take you there.

I even downloaded a fresh wallet since I backed up my wallet.

You'll have to delete the data directory. Be sure to save your wallet.dat file.

(May 6, 2014 07:34 PM)templar77 Wrote: [\[CITE\]](#) Has someone patched Kimoto's Gravity Well Time Warp Exploit on Omnicoin?

That will be implemented at the next update, since the patch requires a hard fork, but we have the resources to push it as an emergency patch if need be.

Kuso - May 6, 2014, 8:28 pm

I deleted the data directory withing Roaming folder. However I cannot recover using my wallet.data for some reason.

Crypto™ - May 6, 2014, 8:30 pm

(May 6, 2014 08:28 PM)Maryland™ Wrote: [\[CITE\]](#) I deleted the data directory withing Roaming folder. However I cannot recover using my wallet.data for some reason.

After deleting the directory, you'll have to run it again without the folder, so it will regenerate the block database. Once that's done, you can drop your wallet.dat file back in, replacing the newly generated one.

Kuso - May 6, 2014, 8:36 pm

(May 6, 2014 08:30 PM)Crypto™ Wrote: [\[CITE\]](#) After deleting the directory, you'll have to run it again without the folder, so it will regenerate the block database. Once that's done, you can drop your wallet.dat file back in, replacing the newly generated one.

Then I will get this.

Then I had tried to click and drag the data file onto the UI since I had thought you probably meant the other way around. Got this.

Crypto™ - May 6, 2014, 8:54 pm

Huh. That's a new one. Be sure that it's being run as Administrator, and put it in the recreated data directory, do not drop it on the client. Apparently the initial release had improperly implemented URI handling, but regardless, that's beside the point.

Kuso - May 6, 2014, 8:57 pm

WDCFTW - May 11, 2014, 1:28 pm

What on earth made you use KGW for omnicoi? There's much better ASIC shields about e.g Digishield which digibyte and dogecoin use.

Crypto™ - May 11, 2014, 2:33 pm

(May 11, 2014 01:28 PM)iphish Wrote: [\[CITE\]](#) What on earth made you use KGW for omnicoi? There's much better ASIC shields about e.g Digishield which digibyte and dogecoin use.

It's not about ASIC shielding, but rather about dealing with volatile hashrates. We assumed people would be renting rigs, and after a certain period of time, the network might lose chunks of hashing power. However, it seems more targeted towards multipools to prevent instamining at sudden spikes, not constantly fluctuating hash power. Regardless, KGW has been performing well. We may look into modifications when it comes time to push a mandatory update (a la hard fork).

As for ASIC shielding, that would be more of a hashing algorithm-based solution, instead of a difficulty adjustment algorithm solution. It is also not possible to implement into Omnicoin without another reset, which will not happen.

Doctor Blue - May 11, 2014, 3:09 pm

(May 11, 2014 01:28 PM)iphish Wrote: [\[CITE\]](#) What on earth made you use KGW for omnicoi? There's much better ASIC shields about e.g Digishield which digibyte and dogecoin use.

KGW ensures that when a 200 MH/s miner stops mining omnicoi the difficulty will reach decent levels after a single block so it doesn't impose a negative impact on the other miners.

It has nothing to do with prevention of ASIC mining, and if that was the purpose we wouldn't have picked scrypt as ICs have already been created to deal with that.

Crypto™ - May 11, 2014, 4:56 pm

(May 11, 2014 03:09 PM)Doctor Blue Wrote: [\[CITE\]](#) KGW ensures that when a 200 MH/s miner stops mining omnicoi the difficulty will reach decent levels after a single block so it doesn't impose a negative impact on the other miners.

Well said Blue. Also, I'm unable to discern if DigiShield has been tested against time warp attacks, and if it is vulnerable, if a patch is available. There are some situations where taking an earlier version that has been tried and tested in a variety of situations, than a new one with new features that is comparatively untested.

Aceman - June 3, 2014, 7:18 am

Some of the thread is outdated;

Under Wallets and Merchant Tools I think you should remove:

Alex's omnicoin online wallet --- Hacked

OMC-Pay --- Site has not been live for awhile

Omniwallet.net by knar --- Hacked

Omniwallet.net escrow --- Since the wallet was hacked the website is down

Under pools:

<https://omnipool.me/> --- Appears to be a faucet now rather than a pool. Xen0n sent out many emails and stated in the header of his website that it was no longer going to be a pool.

E-Currency Pool --- Never went live

Omnibox --- Furroh said he wasn't going through with it somewhere

OMCPool.net --- Domain is not registered, pool has been down for quite some time

Elamino's Omnipool --- FirEvFlamE abandoned the project I believe. Website is down and has not been up for awhile.

Under tools:

OMC-Pay's Miner Builder --- Website has been offline for awhile

OMC Pool Comparison --- This is now hosted on <http://omc-live.com/>

Doctor Blue - June 3, 2014, 8:56 am

Doctor Blue - June 6, 2014, 3:30 am

(Jun 6, 2014 12:25 AM)Cyrus Wrote: [\[CITE\]](#) Omniscient should make a built in (to Hackforums) online OMC wallet.

I think HF has been hacked 3-4 times already. Having an online wallet combined with this (especially considering the amount of users) probably wouldn't make the site less attractive. It'd end up holding almost all omnicoins in existence.

Pillows - June 7, 2014, 9:35 pm

I'm pretty sure it'd just bring up another OMC hacking attempt. This time it'd be worse with more OMC. I'm pretty sure Omni doesn't want to be held responsible for that.

Vitani's Mate - June 8, 2014, 7:33 am

I think you might wanna change the OMC coin award price from 1337 to 2500.

Since Omni changed the price. ^^

Thread: <https://hackforums.net/showthread.php?tid=4263445>

Just a heads up to you. ^^

Crypto™ - June 9, 2014, 6:15 am

Thanks for making my life easier by reporting everything here guys. Saves me tons of time scrounging through the entire SF. Sooner or later, I will be moving the service list to a wiki though, to make my life easier. I will likely either have an approved list of editors, or require a small donation to discourage spammers.

More info on that later.

You'll need to be more specific. I'd also recommend creating a thread specifically for your problem. Feel free to PM me the link though.

Herbo - June 25, 2014, 7:44 pm

Not sure if you know or not but, the main image was deleted.

Great thread. Thanks Crypto.

Crypto™ - June 26, 2014, 6:07 am

(Jun 26, 2014 01:05 AM)VirusTotal Wrote: [\[CITE\]](#) Yeah, IMGUR is deleting all HackForum's images. I'll take care of the image in a bit. After a brief chat with Imgur support, they're not the ones behind the deletions. Someone's either a) found a way to effectively bruteforce Imgur delete keys, or b) is sending bogus DMCA takedown notices to Imgur. Regardless, it's an attack targeted at HF. I'm looking to see if there are any potential vectors for mitigation, or to at least find out what's happening specifically.

Thanks for the link. The main reason I was waiting is because I didn't feel like dealing with the pain in the ass of digging up the image again xD Updated it to an alternative host now. (LookPic)

Ah, my profile picture was taken down yesterday but I've been using [this](#) website. Hopefully Imgur will figure out a fix soon. It is annoying not just for this thread but many threads that have/have yet to update their images to a different host if they were deleted.

They don't even track the reasons for deletion, so there's not much they can do :/

Curryboy - July 9, 2014, 1:46 pm

Is there a way to transfer my wallet from one computer to another?

Crypto™ - July 9, 2014, 10:15 pm

(Jul 9, 2014 01:46 PM)Curryboy Wrote: [\[CITE\]](#) Is there a way to transfer my wallet from one computer to another?

You can copy the wallet.dat file from %appdata%\OmnicoIn, and/or you can export the private keys via the console 'dumpprivkey <OmnicoIn Addr>' command.

Salman Khan - July 10, 2014, 11:24 pm

i successfully installed omc in my win 8
but it is sync and says 13 weeks behind.
what does it means?

Vexane - July 14, 2014, 2:42 am

Mind putting: <https://hackforums.net/showthread.php?tid=4211617> up with the other OmnicoIn tickers?

Salman Khan - July 19, 2014, 7:32 am

i successfully synchronize my OMC in WIN 8.
now where i can see my OMC Address?
in receive money tab??

is this OMC Address right?

oLLav83RA6YRmrck626MLZfd3JktzjYNPN

Yes that would be an address which you can receive OMC with. I sent you 5 OMC just so that you could see that it works.

thank you so much for 5 OMC.
i got it :)

cooleychillz - July 20, 2014, 9:26 pm

Wow, this is such a cool idea. Glad I'm here to be a part of it.?

Salman Khan - July 22, 2014, 6:30 am

what is the current rate of 1 omnicoin?

1\$ = how much omnicoin?

Doctor Blue - July 22, 2014, 2:44 pm

(Jul 22, 2014 06:30 AM)ghanchifarhan Wrote: [\[CITE\]](#) what is the current rate of 1 omnicoin?

1\$ = how much omnicoin?

Just go to omc-rates.com, it'll keep you up to date with the value, and it can also calculate the value of any amount of coins if you need that.

Slur - July 31, 2014, 2:32 pm

wow thanks for this sir very good person

Devour™ - August 16, 2014, 5:15 pm

Just downloading the wallet now and I'm going to try and mine on omni blue. Wish me luck! :D

SIM-2015410 - August 30, 2014, 3:33 am

I suggest we create a new official thread to replace this now, because we are moving to the wiki and this is outdated and unorganised.
