Thread: [Darkcomet hasn't got a "server module" option\(v5.4\)](#)

Wios - March 29, 2014, 10:51 am

I've probably done something wrong or something but it's just not there, it's v5.4 btw

It's the version of DC you have. You have the latest "legal" version that doesn't allow malicious type behavior. I'll gladly help you set up a RAT, feel free to PM me for my Skype.

Can you please send me a decent earlier version that allows the "server module" option too? I stuck too with the latest goodie two-shoes version. That's all I want. Just PM me your Skype URL or your e-mail so I can contact you. Or simply a link to an old version.

bzr? - May 16, 2014, 12:14 pm

For both of the people above me, here's a clean and trusted download link to the latest version which allows you to build a server:
