Thread: [Custom mails - OG Mails and how to find them! \[Noob friendly\]\[Email checker included\]](#)

Xifi - March 30, 2014, 6:10 am

First of all, im going to explain how to get custom mails

here is a dork for google just put it in the search bar :)

Spoiler ([Click to View](#)) inurl:signup.aspx?domain= provides email addresses powered by Microsoft account. Although you have a Microsoft account

Here are some custom services i found:

Spoiler ([Click to View](#))

@fish.cat

<https://signup.live.com/signup.aspx?domain=fish.cat&lic=1>

@funny.cat

<https://signup.live.com/signup.aspx?domain=funny.cat&lic=1>

@jp.am

<https://signup.live.com/signup.aspx?domain=jp.am&lic=1>

@dot.net i like this one!

<https://signup.live.com/signup.aspx?domain=dot.net&lic=1>

@inbox.pk

<https://signup.live.com/signup.aspx?domain=inbox.pk&lic=1>

@chat.org this one is cool also!

<https://signup.live.com/signup.aspx?domain=chat.org&lic=1>

@skid.pro

<https://signup.live.com/signup.aspx?domain=skid.pro&lic=1>

@hack.cl

<https://signup.live.com/signup.aspx?domain=hack.cl&lic=1>

@xaut.org

<https://signup.live.com/signup.aspx?domain=xaut.org&lic=1>

so that are some costum emails, now we get to the part for searching for a email thats available.

its pretty easy we got some program's for it.

Downloads:

First we need a combo maker

Download: [Click](#)

Virustotal: [Click](#)

Picture:

So now we are gonna make some combo's
First of all you need a wordlist. you can make one yourself!
for example:

Xbox
Playstation
Hackforums
Three
Eleven
Available1
got213
easy53

so we have some words now and ofcourse we need a textfile for the emails. to make our combo list.
so i want the mails @dot.net but you can also do @hotmail.com or outlook.com it doesn't matter just
what you like!

Now make a textfile and insert @dot.net like 20 times depends on how many words you have i only
have 8 words now so i only have to type 8 times @dot.net.

Now load the usernames:
my textfile is named words.txt so i will open words.txt from my desktop.

Now open passwords:
Mine is called mali.txt so i will open mali.txt on my desktop.

It should look like this now:

if you got it like this then its correct!
now press create list! and save it as whatever you like! i will save it as emails1.txt

so now we got emails1.txt on our desktop, open it! with notepad or notepad ++

Now you should have something like this!

ofcourse we still need to delete the : in the text.
so lets do that, open the file and click on control H

in the bar search for type :
in the bar replace with put nothing!

Click on replace all
now you got this:

so we got our email list! now we are going to check if they are available!

First of all you need to download the email checker!

Download:

[Click](#)

Virustotal:

[Click](#)

Picture:

So lets start!

Click on outlook email checker.

Now click on import emails:

import your list, i named mine emails1.txt so i will import emails1.txt.

and now just click on start!

then the available emails will come:

this ones are available for me!

Some other emails from other scans (maybe you find a cool one):

Array@dot.net

XTC@dot.net

Witch@dot.net

Extra@dot.net

Byte@dot.net

Doll@dot.net
Clear@dot.net
SMG@dot.net
Silly@dot.net
Torch@dot.net

Note:

This email checker is for every email,

Examples:

Hotmail.com

Live.com

Outlook.com

And the costum ones like dot.net

you can find cool costum email providers with the dork i provided in the top.

If you have any questions you can send me a private message!

Some more cool emails:

Haunt@outlook.com = Available

Spool@outlook.com = Available

Spend@outlook.com = Available

Creeps@outlook.com = Available

Parody@outlook.com = Available

Thrift@outlook.com = Available

Owning@outlook.com = Available

Tutorial was maded by me,

Programs are not maded by me!

Have fun finding your og emails!

**.dll - April 11, 2014, 8:55 am*

Glad to see my name there: VB.DOCTOR lol?? Did you bought this tool from me, i remember i made it, but i dont remember who bought it ...

El_Xexus - April 11, 2014, 10:27 am

It will be helpful for many,thanks for sharing.

Paathurnax - April 11, 2014, 10:32 am

Might try this out in the future. Thanks for this.

Yrame - April 11, 2014, 11:10 am

Thanks for this! Works exactly how you showed!

Xifi - April 11, 2014, 11:56 am

Nah didn't bought this but got it from a forum :)

hunterdubai - April 13, 2014, 9:09 pm

thanks for this im going to use it. will they get deleted or anything if its on someone's custom domain name? i don't know much about this area!

Xifi - June 6, 2014, 1:21 am

TehHaxx - July 10, 2014, 3:23 am

Good tutorial, are both programmes safe to use? that combo maker tool can be useful for some other programme Ive got.

Dont suppose you have any email checkers which check validity of email:pass?

Talu - July 10, 2014, 7:30 am

Thanks for sharing, will be useful for many.

M?tt - July 10, 2014, 7:32 am

This is so extensive, thanks for sharing though.

Elixirz - July 10, 2014, 12:06 pm

Seems promising. I won't download though. Good luck to everyone that uses it.
