(Jul 4, 2014 05:14 PM)Happeh Wrote: [\[CITE\]](#) Vouch for the coding services.

I requested a custom coded VPN client with a medium amount of features. The customer service was top as I was always being informed of added features, if everything was perfect and the progress. If I ever had a problem I'd just give a nudge and it would be fixed within minutes. I was always invited a few times into some livestreaming of the code and got to even try things out while it was still in alpha.

Here comes the best part - I ran into a little money trouble. I informed everyone and said I wouldn't be able to pay on the agreed date. I felt bad for taking my word back, but I was quickly reassured it was fine and to pay when I can. It just felt awesome to have that sort of trust between the customer and client and as soon as I was paid I handed everything over and received everything within minutes after.

Gotta give the service a 10/10, just because they go above and beyond. Placing trust in clients, coding some tough features and even trying to better themselves and add more. Top quality!

(Jun 6, 2014 03:05 PM)Ross Geller Wrote: [\[CITE\]](#) I have used his coding services and this guy is as legit as you can be.

First of all, communication was great. He will answer any question, he won't ignore you, he will explain everything.

I won't talk much about coding because I really don't know much about it, but as far as I know, this guy is really skilled.

Price is also really good. When you make a request he will basically offer you what types of services you can get and will list you a price for it. Not many coders do that and I honestly loved that.

But the thing I loved the most about this coding service is professionalism. This guy is really professional, it really felt like dealing with some kind of an experienced businessman. He doesn't act like kid, really, really professional. And also, he is really flexible too. Anything you want you can suggest him and he will probably accept it. And one more good thing is that you don't pay anything until he makes it. Then you can check it on team viewer and if you like it, you buy. If you don't like it, you tell him what needs to be fixed.

I could write so many things about this coding service right now, but it's better if you see it yourself. Overall, I am more than pleased with what he provided and I will definitely have him in mind for my future projects. Huge vouch for this guy!

jamilv - June 5, 2014, 7:13 pm

Hey,

Can you build a traffic bot?

Basic stuff in terms of features:

- Use and rotate proxies (probably best as a .txt source)
- Set viewing time range for randomization (up to 999 sec or something)
- Emulate links clicks (able to set a range for how many clicks with randomization between the range)
- Able to set URLs/targets to rotate through via .txt file or something
- Able to set user agents/referrer list through .txt
- Able to set number of threads running (browsers/bots or whatever it would be that runs the views)

- Set number of views to deliver

Let me know!

??1x1x1x1 - June 6, 2014, 4:56 am

I need a website/php script which is jus displaying or providing a specific set of data via an api.

basically I need what I describe here: <https://hackforums.net/showthread.php?tid=5724097>

Are you able to get the data as described in my thread and then make it available via api? (The data is constantly changing so the pho script/website needs a permanent connection to their server to get the current data I think.)

If so I would have a job for you:)

??1x1x1x1 - November 29, 2017, 5:32 am

I should have time this weekend for a task or two!

Shoot me a PM if interested!
