Are you sure that you are not stealing my email since your program already request my password?
:D

AngularJS - April 1, 2014, 11:08 am

No, it don't steal your e-mail or anything like that, it just asks for that because gmail needs the correct details.

If you don't trust it create a fake e-mail.

Kind Regards, XAnacondaX.

I like the idea of the Email bomber. But I don't see where I can put a sender name plus. How can I send a attachment with it?
