[Aura](#)

Sector Leaders

[Aur?](#) (Head Leader)

[Roger Waters](#)

About Us

The Brotherhood Computer Sector was created to aid those in need with their computers and other devices. Our members will aid you in every step of the way with repairing, upgrading or updating your computer or other mobile device. Our members must face a standard based off of the requirements set by the leaders and if they fail to comply, they will be kicked from the group.

Sub-Forums of Activity

These are the Sub-Forums we expect you to be active in,
at the minimum you will need to pick two in you application to
be active in. If you are active in the other ones not listed, that's great,
but you cannot pick those in your application.

We are currently looking for more members to fill the OS X and Linux, FreeBSD and Unix Flavors sections.

Microsoft Windows, XP, Vista, and Windows 7

Windows 8, RT and Surface

White Hat Help

Linux, FreeBSD, and Unix Flavors

Apple Mac and OS X

Computer Overclocking, Customizing, and Hardware

Networking, Routers, Switches, and Firewalls

Requirements

- Be active in sub-forums under the computing tab, this should be most if not all of them.
- You must be active in The Brotherhood sub-forum, posting a few times in a week at the very minimum.

- Reputation must be positive, all reputation will be looked at and can be a decision maker on whether we let you in or not.
- You should have a reasonable amount of posts in the computing sub-forums, the more the better.
- Applicants with more than 20% Warning Level will not be admitted.
- Complete sector activities on time with great effort put into them.
- There is a mandatory assignment every week. Failure to complete this assignment will result in an expulsion from this sector and also from The Brotherhood.
- The Brotherhood Computing Sector is also lead by rules that must be respected by all of its members. If you are accepted into this sector, the rules will be sent to you via PM before you actually get invited in this sector. You must agree and accept these rules before being invited.

Application

Code [color=tan]Username: [/color]

[color=tan]Time Zone: [/color]

[color=tan]Country: [/color]

[color=tan]Pick two sub-forums you will be regularly active in: [/color]

[color=tan]Pick the subsector you would like to be part of : [/color]

[color=tan]Describe your background with computers: [/color]

[color=tan]What makes you stand out better than others to make yourself more qualified to be a part of this sector?: [/color]

We recommend that you spend a good amount of time on your application, the more information, the better. If you make your

application formatted and making it really stand out, you slightly have a better chance on getting accepted than someone who has not.

Note

For every one who's applying and is picking the White Hat Help section and the Windows sections as their active section, be sure that I'll personally take all the time I need to look into each of your posts in these sections. White Hat Help/Hacking is NOT something to be taken lightly. If I see that you're lying about your White Hat Help skills/knowledge, or that I've seen you posting in the White Hat Help section in the past and that I find that you are a "threat" to this section by the advices you give, I'll personally reject your application. I know it might sounds rough, but I won't take anything related to the White Hat Help section lightly, I promise you that. For the Windows section, be sure that I know who's skilled in it and who is not, so you could understand my "warning" for the White Hat Help section could apply for the Windows sections as well. Thank you.

Update

Here's the current Subsectors of the BHCPU, and the number of spots opens in each of them.

Windows Subsector : 2 people including one EXTREMELY talented;

OS X Subsector : FULL

GNU/Linux, FreeBSD and Unix Subsector : 1 person;

Hardware Subsector : 2 people;

White Hat Help Subsector : FULL

Mobile Subsector : 1 person

I'm also adding one more question in the application that will ask you which subsector you would like to be part of.

Thank you.

Good luck to everyone who applies. Hopefully we can get some people to work with Mac OS X and Linux as well. Make your applications good, I'll be checking them. ?

Pick two sub-forums you will be regularly active in:

[Computer Overclocking, Customizing, and Hardware](#)

and

[Apple Mac and OS X](#)

Pick the subsector you would like to be part of : Hardware

Describe your background with computers: I have been working with computers for a year now. It all started when I took my first console apart. As a child, I loved taking stuff apart and learning the components. Now, I have built 2 computers, worked on at least 7 and fixed 3. I love learning about computers components and how they work.

What I do:

Building and OptimizationI build computer mock ups for people around their budget, what they need to do, and optimize it the best I can. Most people over spend on their PC because they do not build it for the future and what they need to do. Most people think the most expensive parts are the best, a \$500 build can run Battlefield 4 @ 32fps. I help daily in the Computer Overclocking, Customizing, and Hardware section by helping people optimize their build and make a build for them around their budget.

TroubleshootingI help users troubleshoot errors, for example, "My GPU is running slow, my usage is really high but I am not playing a game?" My first question is for the user to post their process list to see if they have a miner running on their computer. I also troubleshoot compatability issues and all the other errors you can think of.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: If it has something to do with working on a computer, I'm there. I like to think outside the box as many others. I am weird in a way, I like to take a part, and just think about how it was made, and what could be done to it. Along with anything else.

Components I have highly studied on:

Graphics Card (GPU)I have studied Graphics Cards (Graphics Processing Unit) for about 3 months now, If someone is trying to compare performance in gaming, I typically compare vRam, and clock speed. Most enthusiast gamers looking to get the best performance of their unit will overclock. This is when you take the components clock speed and basically tell it to go faster but at a stable rate, this often requires your component to have adequate cooling and power availability. But the average consumer wants to just buy the computer components and be able to run their current games, most do not think of future games. If someone is trying to compare how good the card will render, I tend to compare the Stream Processors (AMD, Anti-Aliasing) and CUDA Cores (NVIDIA, Tessellation). Tessellation is used for expressing the flat objects to more of a 3D feel. Anti-Aliasing is optimized for smoothing out the video, for example Code I am looking down a road on DayZ, the edges are

jagged about 200 meters ahead of me. AA fixes it to be smoother on flat spaces meant to be rounded and 3D looking.

Processor (CPU) I started learning the mechanics of a CPU when I first got into this. It is simply the brain of the computer. It tells everything what to do basically. Think of a animal cell, it is very complex as the DNA in a mammal is very complex due to it changing in mitosis. It is like having Chromosomes (RAM), Senses (GPU), Cell Membrane (Motherboard), Nucleus (CPU).

The CPU sits in the Motherboard. The motherboard has all the other parts attached powered by electricity. The Cell Membrane is inside the cell. The cell here is the Case. Then, the chromosomes are daughters of the DNA. The RAM is the memory which provides memory applications, Random Access Memory. The senses allow you to see and hear in this case. Your Monitors are your eyes. You see what the GPU is putting out. The GPU is like an imagination, but your seeing it on a screen. Game creators take their imagination and project it into code. Your GPU then takes the code and resources and projects them. Then the CPU basically solves what the consumer throws at it. This CPU runs off a microarchitecture. AMD's latest microarchitecture is Piledriver. I am AMD consumer and studier. Also, some CPUs are Unlocked. Unlocked meaning the consumer can overclock to likings. Another thing about CPUs are, some are APUs. Meaning it has a Integrated GPU. AMDs latest APU is Kaveri. Then, AMD has Turbo Core Technology. Meaning, if enabled, when needed the CPU will boost itself. This will cause more power usage but fastly optimize the speed.

Hard DriveAh, the hard drive. Just about any piece of technology you own has one of these. Whether it be, a Playstation 1, a Phone, a Gameboy or even a remote. These things have to store data some way don't they? Now today, they have USBs, portable Hard drives and SD cards. SD cards are usually in cameras as well as Discs. Discs are a multimedia way of storing a distribution or media. Hard Drives are mechanical and come at all kinds of speeds and sizes! Now, don't confuse a SSD (Solid State Disk) with a Hard Drive. A SSD is nonmechanical and much faster but they do indeed cost more. You can take two Hard Drives, and put them in a RAID 0 Configuration. This allows your hard drives to split up partitions. Also, helps gaming in minimal ways. A SSD is usually used to put your OS on, so it uses the SSD to boot up and your HDD to find storage. The SSD is at least 50% faster than your average single HDD. A HDD is powered by SATA (Serial Advanced Technology Attachment).

Not really standing out, but my most active posting place is CO,C&H. [My Post Activity](#) Feel free to PM me with ANY questions about my application

Tokyo ? - April 3, 2014, 1:00 pm

Good luck to all applicants, they do interview you thoroughly so expect that if you lie on your application you WILL be caught. Make sure that when you apply, you pick the best sections for yourself in which you monitor and make sure that you know a lot about your chosen sections. This is a FANTASTIC sector/group to join so don't hold back if you have the urge to apply! Good luck to all applicants and hope to see some new faces here shortly.

Warm Regards,
-akaKurious

Pick two sub-forums you will be regularly active in:

- Computer Overclocking, Customizing, and Hardware
- Networking, Routers, Switches, and Firewalls

Pick the subsector you would like to be part of :

- Computer Overclocking, Customizing, and Hardware

Describe your background with computers:

I've been working with computers for a few years now, as a child I already loved to play on my PC. I became gaining more interests in Computing, hardware related, and started to put my own PC together on the age of 14.

After finishing my school, I started studying computing and networking.

As I already said, I've been studying computing and networking, most of it was Windows based but also some Linux parts came handfull.

I managed to set up a whole server including DHCP, DNS, NAT, AD on Windows as well as Linux.

I also obtained knowledge about Firewalls, Mail Servers etc.

I've been writing guides on how to set this all up properly.

I could also provide proof about the above.

As I am still a student, which needs to be provided with more knowledge, I've been setting up a paid service in my town.

I'm repairing their computers and cleaning them up.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I'm a very helpfull member with a lot of patient, if somebody doesn't understand anything the first time I say it, I'll try to explain it better and provide even pictures and example's.

Besides, I am a friendly user which likes to socialize with people on Skype / Teamspeak etc.

I never really posted a lot in the sections, as I am currently busy with my study, but I am willing to pick this up and will deffinitely do that.

Thanks for viewing my application.?

Kind Regards,
MaskedMyS

Teh Afro - April 3, 2014, 2:16 pm

Pick two sub-forums you will be regularly active in: Computer Overclocking, Customizing, and Hardware & Linux, FreeBSD, and Unix Flavors.

Describe your background with computers: I was six or so when I first got into PC's. I started playing Unreal Tournament 2004, was pretty fun I won't lie. Although I've always been interested in hardware as opposed to software. I was age 11 or so when I built my first PC, with some help of course. It's all kind of ironic as I prefer hardware but I'm going on to study software development in a few months. I'm actually applying not to share my current knowledge, but instead to learn. I've recently installed Mint onto a separate machine in the hopes of learning more about Linux etc. After a recommendation, I plan to keep a log of everything I do on Mint. Everything I learn, toy around with, everything.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: More qualified in terms of knowledge? I'm not. I'm on par with others, but it's my determination to learn that sets me aside. I'm passionate to learn and also want to do my best to benefit the group. I'll be more than active in the sector and will do my best to make my spot well deserved.

Thanks for reading. ?

Loomaanaatii - April 3, 2014, 2:18 pm

Guys put more time into your applications. It will pay off.

Agent Shark - April 3, 2014, 2:42 pm

Username: Shark

Time Zone: EST

Pick two sub-forums you will be regularly active in: White Hat Help & Computer Protection

Describe your background with computers: Been a computer security activist for over 4 years. I've been partially trained on certain areas from various forums in regards to security. These groups include GP, BleepingComputer and GeeksToGo. Love the security field and I am huge friend of helping others learn.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I've been in this area of Hackforums longer than probably most of the members of HF. Check my activity. White Hat Help is my field. People of the MRT team along with former staff members and even former MRT members (HJT) can say that I am a huge activist in this area and this field is by far the most fascinating to me. I am also working into a major for this in the future. I'm not going to justify why I may stand out or not just I know that the amount of work I've put into the WHH section shows and many members know of it. Hell, some of them are even around now to say so ?

Being apart of this group allows me to assist others thus making more active members in this field. That's my main reason for applying. To help others learn the field and interest more members here ?.

I appreciate you taking the time to read this application ?

Regards,
Shark

Country: United States

Pick two sub-forums you will be regularly active in: Computer Overclocking, Customizing, and Hardware

Networking, Routers, Switches, and Firewalls

Describe your background with computers:

I'm very technically inclined. I love taking things apart and putting them back together again. I'm currently in school for a degree in Computer Support (Hardware). I've custom built my own computer as well as many others for friends/family. I go out of my way to help people with there PC issues. My neighbors call me often to come down and help them with not only computers, but electronics in general. I'm basically a computer/technology handy man. Doing whatever I can to explain something or give someone a better understanding.

I never claim to know everything. No one can with the way technology/computers are developing. The reason why the COCH section is one of the best sections on Hack Forums is the team work that's involved. It's the combined effort of multiple, knowledgeable members. Some of us know more about one subject then others. We often reference each other when we don't know much about the task at hand. The result is very balanced and fair advice that members can benefit from.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

Out of the 5,241 posts I have on Hack Forums, 2,387 are in the Computer Overclocking, Customizing, and Hardware section alone. I offer build advice, troubleshooting, and just general assistance for anyone that needs it. I have some networking experience. I've set-up multiple home networks and understand simple concepts like portforwarding, firewalls, etc.

Pick two sub-forums you will be regularly active in:

- Computer Overclocking, Customizing, and Hardware
- Networking, Routers, Switches, and Firewalls

Describe your background with computers:

I have actually been working with computers for some time now. Ever since I was a kid I loved playing any type of computer game, whether it was a Flight Simulator or Battlefield, I love the idea of a mouse and keyboard, and still do.

2 Years ago my Dad passed away. My Dad had taught me everything I know about Computer hardware, and has pretty much made me very interested in it to this day. Yet only recently have I been urged to build my own computer, and can't wait to get the funds to do that.

I'm actually taking Computer Information Technologies and Cisco Networking (Routers) soon, so that is going to be awesome for me to have some background information to come in this group on.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I am a very active member. Whether it's the sub-forums or the Teamspeak. I will be there once a day. I love filling up the Nexus sub-forums, because I feel like I am doing something to contribute to the group and I want to feel this way with another group. Other than that, I do have a rather wide knowledge base on certain subjects and feel I would be a great big help!

Thanks for reading! ?

Country: United States

Pick two sub-forums you will be regularly active in: Computer Overclocking, Customizing, and Hardware and Networking, Routers, Switches, and Firewalls. I plan on being more active in these areas. I usually just learn from them and don't post but I going to start making tutorials and post a lot

more. I really love these sub-fourms and plan on doing a lot with them. I think these sub-fourms are two of the most interesting sub-fourms on HF. I really like to browse them and learn. I have learned tons of things from these sub-fourms. I also like the Linux subfourm. I know a lot about Linux from Pentesting. I think Linux is my favorite OS and is really nice to use.

Describe your background with computers: I built my own computer about a year ago and have been learning about computer for well over a year now. I have learned a lot about computers while building my own PC. Computers have interested me for a while now. I have had a lot of experience with parts and replacing them. I am most experienced with building and parts. I have done my research and have experienced/used a lot of parts like graphics cards and CPUs. While putting my computer together I also read a lot of guides and watched a lot of videos on computers and parts. I have learned a lot and keep learning every day. I love computers and have always been interested in them. I started to play PC games when I was around 9 but never got into computers or building one till around a year or two ago. I also have a lot of experience with linux. I have used linux for a lot of things. I use Kali Linux for pentesting and other things so I know my way around it. I think Linux is one of my favorite OS just because of how much custom things you can do to it.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I am willing to help everyone out and spread my knowledge throughout the group. I am a really friendly person and love to have fun but can be serious when it is needed. I am willing to help out the group and any members of the group as much as I can. I would love to help out by making guides for the group. I am a very outgoing person and wouldn't mind talking to other members and helping them out in any areas they need help in. I plan on making a shit ton of tutorials/guides for The Brotherhood. I think I stand out better than others because of my knowledge and my potential. I am not just joining this group to teach and help other but to learn. I hope to use my skills and knowledge to help all the members to the best of my ability. I also think I would be a good member because I am a fast learner.

Thank you for reading my application
-Envious

Aura - April 3, 2014, 5:11 pm

I've see some nice applications so far. Just a heads up' I'm probably only going to pick 2 or 3 people max that have Hardware section listed as their active sections as we have a handful of members that are talented in that domain as well. We are looking for people that knows their way around OS X and GNU/Linux mostly. If you're an experienced user of these OS, your chance is right there.

Networking, Routers, Switches, and Firewalls

Describe your background with computers:

I have been employed as an engineering designer for a number of years working with 2D and 3D computer aided design, therefore my work and private life revolve heavily around computers in every sense of the word. Due to the nature of my work there are often strict time constraints placed on completion, so when hardware fails often the quickest way is to find a solution and repair it myself. Over time i have built several computers all with different purposes in mind, from 3D modelling to gaming in my free time.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I am very goal orientated and strive for perfection in everything i do. I take time to pass on any knowledge on a subject that i may have to others very willingly. I am also in the process of designing a case from the ground up aiming to complete it within the near future. Computers are my passion, and becoming a valued member of The Brotherhood due to this would be an honor

Pick two sub-forums you will be regularly active in:

Linux, FreeBSD, and Unix Flavors

Microsoft Windows, XP, Vista, and Windows 7

Pick the subsector you would like to be part of :

Windows Subsector

GNU/Linux, FreeBSD and Unix Subsector

Describe your background with computers:

I have a Bachelor degree on Information Technology, now I'm on Master degree.

I have some programming knowledge. I know Java (main language), C++, Python and a little of Pascal. I also know HTML, some CSS and php.

I know about networks too. Hubs, switches, routers, etc... Those kind of stuff that an IT guy should know.

Got knowledge about cryptography, stenography, operating systems.

And yes I do like Linux. On my PC I have Arch Linux dual booted with Windows XP (because Windows XP is the only OS my mum can use ?).

On my laptop I have Manjaro Linux and Windows 7 Professional.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

Well, I think I'm a patient and helpful guy. I try to explain and help members with professionalism and make it easy for them to fix the issue/s.

I know I haven't been active on the forum but I'm starting to dedicate more time since I'm not very busy with school.

Thanks for viewing my application.

Kind Regards,
Burak.

G??gle - April 4, 2014, 1:34 pm

Good luck to everyone who applies!

I'd like to see some more people like me who are in the Apple sub sector.

Aura - April 6, 2014, 10:03 pm

Just a heads up, I might have one or two spot opening for the Windows and White Hat Help sections, so come check back this thread for more updates eventually.

Wolved - April 6, 2014, 10:21 pm

Pick two sub-forums you will be regularly active in:

[Computer Overclocking, Customizing, and Hardware](#)

and

[White Hat Help](#)

Describe your background with computers: I have always been into computers since I was a child, I knew nearly all the basics when I was six and now I know nearly every basic/advanced thing to optimizing etc computers now. I am 16. I am great with overclocking, having doing it in a computer company I worked in, I also help my Uncle in schools in the IT Department fixing computers/networks etc. I have come to the stage where everyone in my area at home contacts me for help, I usually do it for free.

What I do:

CreatingI am an avid PC Builder and have built over six gaming PC's and two work/home PC's for family's and friends. I have a lot of experience with creating computers as I have been for over 4 years now and I am great with optimizing them so they can reach their fullest potential, overclocking etc.

Troubleshooting/FixingI love to troubleshoot things, I do it for my neighbors and many more people, being with networking (routers etc), computer software, or even internal objects such as fans etc. I love to help people and computing is something I enjoy helping people with most as I am most experienced with it.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I believe my knowledge with computing can be expanded in this group and I have a lot of knowledge I can share with the other fellow members in this group. Despite some others who may be more experienced than me I can assure you I would know at least a thing or two about computers that they would not know. That is why I really hope you take me into consideration

ProtectionI am starting to become great with Computer Security and soon will be becoming a Certified Ethical Hacker, (white hat hacker). I will then be able to assist people and even companies with debugging, fixing issues, finding exploits, programming etc. I love to make computers secure especially for myself as it provides that relief of being safe which is definitely hard on computers. You are never, ever safe but you can make yourself as safe as possible which is quite good.

ProgrammingI am learning to code at college right now and doing web design specifically. I am learning a lot and it is providing great when it comes to computers and the software I use etc. This in my opinion is a vital part of learning computers and without this knowledge, I myself can assure you I wouldn't even be half as knowledgeable as I am now.

[align=center]I hope you take into consideration my application to the computing sector. I would love to be apart of such an amazing group of people! Thanks, Counted.

Pick two sub-forums you will be regularly active in: Networking, Routers, Switches, and Firewalls and the Windows section, note that I am not very active in there now but I will be very soon.

Describe your background with computers:

Ever since I was a kid, most of my time has been spent here on computers. I'm the kid that is almost always online, can be found tinkering with everyone's stuff and the kid that everyone he knows come to for computer trouble.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

What makes me stand out is my eagerness to learn and teach others. As of late I have been very VERY lazy, I'm not going to lie and I have been looking for something to push me for a long time. The only reason I want to join is the fact that doing assignments and being pushed by everyone around me will make me a much better person. I am also hoping it will give me the kick I need to get off my ass and be productive (aka helping in the computing sections).

Pick two sub-forums you will be regularly active in: White Hat Help
Apple Mac and OSX

Describe your background with computers:

I started my big interest with computers when I was about ten, I've been studying malware and whatnot since, how to protect yourself getting infected, how to protect victims getting inside your computer, network and whatnot, my goal is to help others keep safe from losing there valuables and private information to somebody with a RAT and Key loggers.

My second goal is to help with Mac problems, I've had several problems with my Mac and have managed to fix all of them, I know my Mac (Macbook Pro Retina) inside and out, and am going to start developing applications for them very soon.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

This is an interesting question, but how to put it into words is the hard part.

I am posting almost 30+ times a day now, I'll be opening help desks for both Mac and White Hat problems, I am not upping myself too much, but I know what to expect and how to counter it pretty

easily.

EvanLB7 - April 7, 2014, 3:13 pm

I don't see a date on the thread, is there a date of ending on this recruitment?

Aura - April 7, 2014, 3:19 pm

Time Zone: GMT +0 (I am online roughly 14 hours a day however)

Country: United Kingdom

Pick two sub-forums you will be regularly active in: White Hat Help and Linux, FreeBSD, and Unix Flavors

Describe your background with computers: Ever since a young age I have been passionate about not only computer hardware but also security. My family ran a business from home since I was around 4 years old so I was exposed to computers and the Internet from a very young age. Growing up I took the chance to learn all I could about ITSec related topics, and it paid off. I'm now an EC Council Certified Ethical Hacker, Security Analyst and Licenced Penetration Tester. It's also been one of my goals to join the MRT, therefore my malware removal knowledge are also fairly advanced ready for when they open their recruitment ?

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I'll just go ahead and list my resume ?

Networking;

CISCO CCENT, CCNA, CCNP
CompTIA A+, Network+

Security;

EC Council CEH, ECSA, LPT
CISCO CCNA Security
CompTIA Security+

I think it is safe to say I know what I'm doing. If it helps my cause, I'm part of the Null penetration testing team and currently an Administrator of Legion.

Im gone brah - April 10, 2014, 6:41 am

Pick two sub-forums you will be regularly active in: Networking, Hardware, and may be able to help out in Linux every now and again

Pick the subsector you would like to be part of : BHCPU(I think, please PM me if this is wrong)
Describe your background with computers:

I have been on them since I was about 3 years old. I started really learning about them when my parents took up a job of running an internet cafe, there I had all the hardware I needed and I could do whatever I wanted to the PC's. The technician there met me, saw I was interested in computers(He noticed my l33t CMD skillz) and gave me a book on building them. From there I have went learning as much as I can about computers. I generated an interest for hacking, and I started looking at things like Metasploit, SQLI etc but never stuck with it. I got more interested in coding, it took me a long time to get the hang of it but I did. I can now code in Python and I know Java (syntax, OOP concepts etc). I am now learning TCP/IP every day, I plan to have read at least a few books by the end of summer. I also have experience with Linux, so I could help out in that section every once in a while.

I am now doing work experience for 8 weeks as a shadowing computer technician. There I get to do a lot related to networking, especially the hardware side (switches, routers, firewall's, putting those retarded ethernet(cat 5) cables together) and also do a lot of hardware related stuff. For example, yesterday I managed to find out you don't EVER turn a server off. £1300 server = trashed.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

Past experience I guess. If this were to be a hacking sector, I'd have no benefit, same goes for many other things but when it comes to hardware I have had experience. Linux is my main OS(Arch) and I prefer it to Windows by far. And networking is what I am learning right now, so I will continue to gain knowledge. Here are some of my skills:

Python(Intermediate, still training myself)

Java(Beginner-Intermediate, no use for it so I stopped)

Hardware(Intermediate, still learning)

Networking TCP/IP(Beginner-Intermediate, still learning)

Hacking knowledge(Beginner-Intermediate, know a lot of theory but never really put things in to practice)

Pick two sub-forums you will be regularly active in:

White Hat Help

Windows XP, Vista & Windows 7

Windows 8 RT and Surface

Pick the subsector you would like to be part of : White Hat Help or Windows.

Describe your background with computers:

I've always had something with computers.

While others were outside playing at the age of 9 I was reading things about Trojan Horses.

I have interest in very few things in life, and one of those things is the computer.

I spend a lot of time on my Computer everyday, and I won't stop anytime soon. I'm currently learning batch & Python too. I already know HTML. I'm improving very fast with learning Batch, I was very happy when I finally got something to work yesterday. I have made threads on HF that are useful to people. I've made guides for port-forwarding, speeding up your PC and I try to help out as much as possible in the WHH/Windows sections. I was busy the last 2 weeks but starting Wednesday I should be back to my original scheme where I have a lot of free time. I plan on taking a study related to either Computer Security or Networking, there isn't really anything else I enjoy that could be a job.

As you may know, I was lazy. Yes, I said was.

Some things happened this week in real life and I've started to dedicate more of my time to the things I love and to try harder on everything I do now. This applies to all my interests. I have always owned a Windows Computer, I never had an Linux or Mac. I plan on building my own computer soon, I just need to save up the money.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I'm dedicated to what I do, I won't disappoint you.

I'm eager to learn, and I admit it when I'm wrong.

I will have a lot of free time again starting Wednesday.

I'm easy to get along with, and I increase sub-forum activity.

I enjoy what I do, I don't do it for status nor do I want anything in return. I appreciate a "thank you" and I don't want anything else. When you do something, if you enjoy it it's always better.

I'm unique, I try to be as original as possible.

I put effort into what I do.

I want to expand my current knowledge. As I said, I have experienced some things in real life and I'll be giving life all I have now.

I would love to be a part of this group and sector. I have applied numerous times but I've failed all of the times.

If I get accepted I'll try as hard as I can. I personally believe I'd be a valuable asset to The Brotherhood and it's CPU sector.

Komodo - April 11, 2014, 6:53 pm

Good luck on all the applications, Aura and Roger will be checking them thoroughly.

xVulnerable - April 11, 2014, 8:57 pm

Great group with a great leader. Good luck for anyone applying!

Aura - April 11, 2014, 9:07 pm

Thanks for the kind words guys, appreciate it ! ?

Teh Afro - April 12, 2014, 6:27 am

Will definitely be applying again next recruitment. Heard and seen a lot of good things regarding this sector.

Silence - April 12, 2014, 10:34 am

Pick two sub-forums you will be regularly active in: White Hat Help and Microsoft Windows, XP,

Vista, and Windows 7

Pick the subsector you would like to be part of : Linux, FreeBSD, and Unix Flavors and Networking, Routers, Switches, and Firewalls

Describe your background with computers: I had alot of interests in computers since I was a kid the subject "Hacking" was very interesting for me (Just like every kid haha) so I joined HF back in 2009 (I had another account but dont worry haha it was been dealt with by Omni back in 2010). I was very active for a few years on HackForums improving my knowledge about the basic stuff (Ratting , Keylogging and such) Had a little break in 2013 and decided to become very active again in 2014 this time specializing myself in the removal of Malware. I go to a IT school, as my future job will be hopefully Pentesting. I get lessons in computer security , Networking , Microsoft and alot of Cisco and Aries.I am currently experimenting with Kali linux and would love to be active in the Linux, FreeBSD, and Unix Flavors section. I am also very interested in HTML , PHP and Java. Currently learning HTML

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I have a sharp eagle eye. I always re-check stuff even though that multiple people already approved something. I learn pretty quick. I can think for a potential solution even when I do not fully understand the subject. I am a deep thinker I always try to cover up something that is hidden deep within.

iMythik - April 12, 2014, 10:43 pm

To those applying put images and seperation lines into your application. It makes it more appealing.
EXAMPLE:

At the top insert this image

Username: -Hyperion

Time Zone: Central Standard

Country: USA

Pick two sub-forums you will be regularly active in: White Hat Help Subsector/GNU/Linux, FreeBSD and Unix Subsecto

Pick the subsector you would like to be part of : White Hat Help Subsector

Describe your background with computers:

Running my own computer business specializing in malware removal and pen testing since '10. Have an associates degree in and went 4 years to a Vo-tech for micro-computing and PLC's.

Also certified in electronics and mechanics(PID Control, hydraulics, wiring, Solid works etc) Am an expert in malware removal and pc tuning. My company specializes in pen testing, phone repair, computer building, micro controllers programming and malware cleanup. Have done countless classes and studied constantly. Including pen tester labs, coursera classes on computer basics, programming and networking, android app development, offensive security. Have taken part in several hacker challenges from hak5.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I help people for a living and am online all day. I have real world experience and patience with clients as well as a vast thirst for knowledge. I also research a huge amount and work on a problem until it is solved. Running my own business has given me a real advantage as I am forced to stay on top of the latest malware and security.

I have access to several company only tools and own a lot of actual hardware for pen tests etc. It has also given me something a lot of people are lacking. Hands on experience.

Aura - April 16, 2014, 9:27 am

Updated the number of people I need for each subsectors. The hardware section is now filled, and for the Windows and White Hat Help sectors I'm looking for one extremely talented person for both sectors (one in each).

Thank you.

Country: USA

Pick two sub-forums you will be regularly active in: Linux, FreeBSD, and Unix Flavors as well as the Microsoft Windows, XP, Vista, and Windows 7 sub-forums.

Pick the subsector you would like to be part of : Server administration

Describe your background with computers: I've been involved in IT professionally for almost 20 years. During that time I have worked for a few well known IT companies. I have a wealth of experience dealing with just about any type of server. A majority of my experience is with the Federal government in some shape or form.

I also have a Bachelor's degree in IT security, and I am currently working on a Master's in Applied IT/Cyber Security.

What makes you stand out better than others to make yourself more qualified to be a part of this

sector?: I have several major IT certifications including: RHCSA, MCSE (Windows 2012 Server Infrastructure/Private Cloud), MCSA (Windows 2003 and 2012), VMware VCP5, CEHv7, and Security+, and a couple of MCITP's. I have a ton of experience dealing with most server OS's, so I thought I could contribute here.

I am a pretty helpful person, and I do my best to help get issues solved. I don't flame people for not knowing a simple answer to their question. They are merely uninformed and haven't experienced what I have. Even I had to start where they are.

I have a pretty helpful and chill disposition and I hope I can help out here where needed.

Aura - April 18, 2014, 3:36 pm

The Windows, Hardware and White Hat Help subsectors are now filled.

I need more members for Networking, GNU/Linux and OS X. As well as Server Admin.

Thank you.

Komodo - April 21, 2014, 4:08 pm

Pick two sub-forums you will be regularly active in:

Networking, Routers, Switches, and Firewalls, and White hat help.

Pick the subsector you would like to be part of :

Networking subsector and or GNU/Linux, FreeBSD and Unix Sub sector.

Describe your background with computers:

3 Years ago, when i was 13, i started learning about how computers work. I Started learning about the components and how the systems operate. It kind of fascinated me to see how systems work and what made them work. My dad builds computers from scratch so he taught me about the main components and how they operate and i started being able to fix computers with problems. Although it confused me at first, It has been beneficial in the long run. I know how systems operate and how they work as ive had some past experience learning and trying to build computers. That has given me enough knowledge to realize how systems operate and what makes them operate. I Can now build computers, provided the parts, So, all in all, i have a decent understanding of computers.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

Although i've only had 3 years experience with computers, I Make that up on weekends fixing computers with backlogs and hardware problems at my local computer store. People there have taught me even more about computers and how they work, which i'm grateful for.

They continue to teach me new things everyday im there, Sometimes i need correcting if im fixing a computer at the store, But it rarely happens. I Almost always get complemented on my work there

which is a good feeling. Maybe im not the most qualified who has posted on this thread, But my consistent learning and thrive for knowledge makes me a valuable asset. Also, i have a good amount of knowledge regarding networking which can help people around that sub sector. All my networking knowledge is mostly self taught, But im still continually learning.

Describe your background with computers: I have been using computers since I was 12 years old using dial-up. I always am around a computer. I couldn't live without my MacBook.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I am a 21 year old hard worker and will be willing to do whatever it takes to strive to be the best. I am a very fast learner and can learn efficiently. I am one of the most hard working person you will find.

I can help users troubleshoot any problems whether it be hardware or software! I almost have every game on the App Store hacked can assist other users in doing the same! I have owned a Mac since 2010 and everyday I learn more and am willing to share the knowledge with others. Wether it be a potential RAT or your battery won't charge I can help solve your problem! Or on the fun side I can help you mod any particular game you want! If you choose me you will not regret it and I believe I can help many users and I believe others can help me and with our shared knowledge we would be brilliant.

Username: Arrhythmia

Time Zone: Central European Time (UTC+1:00)

Country: Poland (Are you writing a DOX 'bout me? ?)

Pick two sub-forums you will be regularly active in: Whitehat Help, *nix, and maybe Windows

Pick the subsector you would like to be part of: WHH

Describe your background with computers:

When I was around 6 years old, I was intrigued by technology. I was always wondering how does stuff work. I loved taking things apart and messing with them.

I didn't have a mentor who taught me computer-related stuff. I learned it by experimenting.

I can code in Python and C#. I have experience in malware removal, and I can use tools such as OTL, DDS, etc.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I suck at writing applications. You will not find a worse application in this thread. Don't I stand out enough because of that?

I am patient and willing to learn. [insert more generic crap here] I like helping people, and I have a lot of free time.

Pick two sub-forums you will be regularly active in: Linux, FreeBSD, and Unix Flavors | Computer Overclocking, Customizing, and Hardware

Pick the subsector you would like to be part of : GNU/Linux, FreeBSD and Unix Subsector

Describe your background with computers:

I grew up on an isolating mountain with dialup internet from the age of 14. I had nothing but a Windows 2000 desktop for my child hood until I upgraded to XP. When I was around 16 I took interest in the opensource community. Unlike most newcomers these days I never began my journey with these systems under the assumption I could become a hacker. In fact I am not remotely interested in hacking activity, although I do not discourage it.

To cut the story short I've been using Linux/BSD for years now. I can guarantee I've probably distrohopped every mainstream distribution and more. Although I'm finally happy with Arch Linux.

I had a nerdy childhood, I didn't go out much. So that's why I spent so much time "studying" this specific area. However years have passed by and I am now officially a stoner with more friends than I can count. It's not that I've lost interest, I just have less time to really nerd out. I have work, college and then I spend my free time getting stoned with my pals. Occasionally I check the Linux section on here and it always seems to be people posting for help rather than anyone engaging in a discussion about Linux/BSD. Half the time the answer is simple enough to write out and sometimes it's hardware related and you have to do a little research beforehand.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?

Well I'm British which may appeal to some. I'm 19 years of age which would suggest I am mature, at least I like to kid myself so. Everyone loves a nerd stoner with a sense of humour.

If it helps the application, I received a private message from a member of this group to check out this application form. I guess that shows some indication that I'm doing something right. Also I haven't checked but I'm going to assume that 98-99% of my total posts are probably in the Linux section. I created a tutorial a while back on installing FreeBSD and I dedicated an evening to writing the UEFI thread. The UEFI thread had to be made to prevent newcomers to Linux screwing up and heading back to Windows to say Linux is shit and doesn't work. It's not that nobody knows what UEFI is but it's that not many people seem to know it causes a world of problems for using opensource systems, especially dual boot setups. So there's a nice long thread to kill your braincells.

I should probably state that I do not use a Windows system and I haven't in years. I have however on an old desktop dualboot Windows time to time to play video games but as I matured I lost interest for gaming. It's a shame really because I was in the Steam for linux beta when invites were given out privately. If I had a decent internet connection I would be able to do so much more with Linux but unfortunately I'm riddled with a 200kbps connection and a non existent upload speed. I guess I'll take up a VPS sooner or later and consider hosting.

Most people in the Linux section consider the BSD/Arch users to be the gods and arse lick them. This simply is not true. I think that anyone who can judge one's intellectual ability based on the operating system they use are rather shallow and closed minded. However should you deem these as such achievements I have used FreeBSD 8.1/9.0 for a long while before moving back to Linux. After I returned to Linux I was back on Debian for another year or so before moving to Arch on this new desktop.

Pick two sub-forums you will be regularly active in:

OS X Subsector

Networking Subsector

Pick the subsector you would like to be part of :

OS X Subsector

Describe your background with computers:

When I was about 6 years old, my big brother got his first computer. But, I was pretty much the guy ending up using it all the time. I got into gaming, and later I go into programming, coding, making graphic, and more. It was about the time I was learning coding that I bought my first Macbook, because I wanted to make iOS applications. I made a few, but never published any. Instead I started to realize how much I loved OSX, it is basic, and easier to use than Windows(at least for people who have never used a computer before). I just really loved the "thing" about Macbooks. And when all the haters arrive telling me that I am an "Apple fanboy", I just love it. People don't know what they talk about.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I've used OSX for several years, and I knows a lot about the features, and settings on OSX. If anybody have a problem, they can always ask me.

Cyber Saint - May 16, 2014, 7:39 am

Hello there, my name is Cyber Saint and this is my application to The Brotherhood computing sector. Thank you for your well-deserved time.

Spoiler ([Click to View](#))

Username: Cyber Saint

Time Zone: EST

Country: Canada

Pick two sub-forums you will be regularly active in: I'm extremely active in the Android section currently and beginning to help out with members as much as I can in the White Hat Help section, but I will begin to be primarily active and a regular in the networking section. I have a very large and complete knowledge of this and I would be able to reply and assist members a ton daily. I have been experienced with such for several years and I began learning back in 2011. Since then I have gained the knowledge and assisted people with networking outside of Hack Forums and frequently through Hack Forums private messaging back in April and March. I would love to be more active in the networking section and become a regular there. I would love to teach, and help others learn themselves while helping them troubleshoot the problem in the process. I can help build an array of more knowledgeable people in the section, so they can begin to help others out as well.

Pick the subsector you would like to be part of: As it is currently open, I would love to be part of the networking subsector.

Describe your background with computers: I have been interested in computers since an early age. I started off with some light gaming on Windows 98 back in the day, nothing compared to the games we have to day obviously but it just wasn't enough. I wanted to spread to something more so I became interested in hardware, programming, mobile, and networking. I began with simple things, in 2012 I started monitoring the network for my father's company website and I began programming several applications for third party Wi-Fi management, nowadays that application isn't functional due to changes in the way things work, however I will begin to work on this again in the near future. In 2011 is when I really started getting serious with computers. I began working with them everyday. Although I'm still just a teenager, I was already beginning to do house visits for small payments for computer repairs, I even troubleshooted a few network problems for people requesting it. I have always had a passion for computers and other forms of technology and I don't think that interest will ever become non-existent, it is something I have loved and been passionate about for literally years.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I feel like I stand out because I am a friendly and patient person. I'm always willing to help someone out to the best of my ability and I really feel like I would learn a lot from being in this group and sector. It would be an amazing experience for me. I am always patient no matter what I am always willing to lend help no matter if they are an upgraded member or not, correct grammar or not, it doesn't effect if I am going to assist them or not, because helping out with computers or anything

is a great feeling for me. Being in Brotherhood I would be like friendly family to everyone in the group and treat everyone with the out most respect inside the group and outside. I am prepared to earn the trust of all the members in the group if I am accepted and it would be a literal dream feeling if I was accepted.

Pick two sub-forums you will be regularly active in: Computer Overclocking, Customizing, and Hardware/Linux, FreeBSD, and Unix Flavors

Pick the subsector you would like to be part of : Computer Overclocking, Customizing, and Hardware

Describe your background with computers: From the moment I was born I knew I was different. While every child played with their electric toys, I saw something else. I would rip them open to see the components inside, tweaked with to improve it or break it. If I made a mistake it was a new lesson learned, then towards age 5 my dad got the first PC in the house. This is the beginning of my learning adventure, I learned how to do basic tasks at the early age of 6. Towards the age of 8 my dad got a laptop and gave me his pc to keep, This was the last year that pc was running, everything was taken out of the case. Due to this being my first time I wasn't aware static can kill a mother board, so it was good bye. Got a old school laptop at age 9 running windows XP, that remained stock other then me messing with custom themes. At age 11 Is the time I started to learning about

protection for PC's. I took the time to research every Anti virus, this is where I met Avast and where my love relationship started for it. At age 13 I got tired of the slow single core dell laptop, so I asked for a desktop with decent parts. This Desktop(Used) was powered by a Pentium 4, it was very responsive but sadly due to bad cooling it eventually overheated and died. Sold the parts to buy custom parts at best buy(Yes best buy I was new to pc building). This custom PC had a [HP](#) case but I added a custom clear plastic door. Anyways specs were Pentium Due core clocked at 2.4 ghz, 2 gbs of ram, HD radeon card with 256 mbs, and a 160 Gbs of Hard drive space. Amazing this pc worked for 2 weeks but one morning it didn't turn on. That was the day my motherboard failed me, returned the parts and bought a new laptop. This laptop was single core Intel celeron clocked at 2.1ghz, Lightscribe was new during this time so I was burning discs like a madman. Not much happened for 2 years other then me modifying windows to have live wallpapers and custom log ins. Towards the age of 16, I upgraded to a new laptop It was a Due core AMD clocked at 2.2ghz and had 3 gbs of ram. I was very cocky during this time, became a AMD fanboy because compared to Intel laptops I had 256 mbs of dedicated ram for the graphics card. I defend this laptop like if It was my child, today I realize how much it sucked. I started to work with my dad in his PC business by building new pcs from scratch for other business. This gave me the courage to build a pc again. Today I own a [Beast](#) and I love this thing. At the moment I won't consider my self as a AMD fanboy but someone who goes for the best deals in power. My Interest of PC hardware led me to interest in cell phone hardware too, today I am the master when it comes to rooting or install custom roms for android devices.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I will make mistakes but unlike everyone else who will give up because of a mistake, I will learn from my mistakes and ensure they don't happen again. I am the type of person who is willing to learn new stuff and I am currently studying in computer engineering, I plan on also getting a minor in networking too. I would love to have a community who have the same interest as me to help me achieve my goal to graduate as a computer engineer. Overall I want to be part of a group who's goals are to help others and teach others. No matter the title I will help everyone equally In the best way I can.

The Hardware subsector is full as written in the OP.

Aura - May 29, 2014, 3:37 pm

(May 29, 2014 03:29 PM)OMC Miner Wrote: [\[CITE\]](#) Which is why I put Linux as a choice too, It's my last choice since I have little experience with a mac.

You still picked the Hardware subsector, change it.

Aura - May 29, 2014, 3:48 pm

(May 29, 2014 03:41 PM)OMC Miner Wrote: [\[CITE\]](#) Ok just changed It to Linux, FreeBSD, and Unix Flavors.

This subsector is full too. Only subsectors left to fill are OS X and Networking.

-zERaIT - May 29, 2014, 5:57 pm

(May 29, 2014 03:53 PM)OMC Miner Wrote: [\[CITE\]](#) Well I noticed you added a update, ok well if network is open I will take that one any day. I also don't mind learning how to a use mac, just need my fafsa money to come in.

Sounds like you've a lot of knowledge around Hardware, but do you also have broad knowledge around Networking to?

It's good to be part of a group, but it does remain quite a lot of skill in the named sub sector.

Pick two sub-forums you will be regularly active in:

Microsoft Windows, XP, Vista, and Windows 7

Windows 8, RT and Surface

Pick the subsector you would like to be part of: Either of the above. This is because I use both regularly as part of my home life and my job.

Describe your background with computers: I started using computers at the age of 4, when, in reception (first year of school at the age of 4 in the UK) I figured out how to turn the computer on, log on, then go on my favorite game. Later, when I was a bit older, 6/7, my ICT classes started in school, where we started being taught the basics of a computer. I just clicked with it. Throughout my primary school career (4-10/11) I loved the IT classes. Then it was secondary school. Here I ran into a few issues with the technicians as I had access to computers whenever I liked, and wanted to mess and find things out. Unfortunately, the technicians do not like pupils messing with their (unsecure) system. By the end of my first year, I had found a way to access the home areas of all pupils, bypassed their web block and nearly got suspended 3 times. This continued on through secondary school, where I took computing in my GCSE's and got a double distinction (highest grade in UK). I am now an Apprentice Network Engineer, working with computers and servers every day, building fixing and upgrading. This can be proven by sending an email to the group owners from my work email.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I feel that, as this sector is literally my job as a Network Engineer that this sector is perfectly suited to me. I will be able to put my experience gained through my apprenticeship into practice and will also, hopefully, learn new things from other members that I can put into practice in my work.

I have re-applied two posts below for an open sector. I did not realise these sectors are full.

Microsoft Windows, XP, Vista, and Windows 7

Windows 8, RT and Surface

Pick the subsector you would like to be part of: Either of the above. This is because I use both regularly as part of my home life and my job.

Describe your background with computers: I started using computers at the age of 4, when, in reception (first year of school at the age of 4 in the UK) I figured out how to turn the computer on, log on, then go on my favorite game. Later, when I was a bit older, 6/7, my ICT classes started in school, where we started being taught the basics of a computer. I just clicked with it. Throughout my primary school career (4-10/11) I loved the IT classes. Then it was secondary school. Here I ran into a few issues with the technicians as I had access to computers whenever I liked, and wanted to mess and find things out. Unfortunately, the technicians do not like pupils messing with their (unsecure) system. By the end of my first year, I had found a way to access the home areas of all pupils, bypassed their web block and nearly got suspended 3 times. This continued on through secondary school, where I took computing in my GCSE's and got a double distinction (highest grade in UK). I am now an Apprentice Network Engineer, working with computers and servers every day, building fixing and upgrading. This can be proven by sending an email to the group owners from my work email.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I feel that, as this sector is literally my job as a Network Engineer that this sector is perfectly suited to me. I will be able to put my experience gained through my apprenticeship into practice and will also, hopefully, learn new things from other members that I can put into practice in my work.

Thanks for reading my application. If you have any questions or queries, feel free to PM me or add my skype, proddy31.

That subsector is full. Only subsectors available at the moment are Networking & OS X.

Pick two sub-forums you will be regularly active in: Networking/linux

Pick the subsector you would like to be part of : Networking

Describe your background with computers: I have been programming/tinkering since i was 10. I have literally 5 computers in my room. A mix of android,linux and one windows computer for gaming.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

Linux QualificationI can install arch linux with no guide. << So proud.

Networking I have a network set up at my house involving all of my computers. I have an ssh tunnel directly to my server so no stupid firewall can stop me on any network. Using this i don't pay for wifi at hotels or any shop. I understand a denial of service attack and how to properly execute a layer 7 attack. I know the networking infrastructure of python, c, c#. (c++ is just wrappers). Using shodanHQ i was able to make my own vpn net with a few computers exploiting there routers.

Aceman - June 4, 2014, 12:05 pm

Networking sector is still not filled, guess I better get active in there so I can apply!

Pick the subsector you would like to be part of : The networking subforums

Describe your background with computers: I have been connected with computers ever since I was 7. I was totally nerding out a game called Runescape and learnt a lot about computer mechanics already about the age of 7. I was not like all other kids that just rushed home to play football. No I was that guy who went home and played the computer all day.

I really loved gaming and hit top 100 rankings in both League of Legends and Runescape. Now on the way I have also learnt a lot about maintaining a computer in a good state. I am the guy in charge of our network connection and basic computer stuff here at home. I am the guy to be asked if my mom has a problem with the computer, and also my friends and grandparents call me when they need help. What I can do is to easily figure out the problem and fix it. But after those years of gaming I have now started to move towards programming and am currently learning C++, Java, HTML and CSS. I also understand how a router and computer is built.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I simply have way more experience and I would spend much more time on helping others compared to the other appliers. I am also a much faster learner than most, and I always get told that I'm good at contributing to a community.

White Hat Help

Windows Sub sector

Update:

Spoiler ([Click to View](#))

As of above post you've said there is still one post left for WHH, that's why I applied.

I know that you've had enough members for white hat section but I really missed the recruitment thread, my apologies.

Describe your background with computers:

I got my first PC when I was 11 year old, since then it's my best friend. I'm currently pursuing Engineering Degree in Computer Science.

Let's talk about my skills and knowledge. White hat security

Hacking

Coding

I do know to code in various languages, which are C, C plus plus, PHP, Visual basic and such languages. as a computer science student I do possess knowledge in many languages. which are ranging from assembly to python. Aside from programming.I do have my skills in hacking, well let's put it this way. I'm a white hat hacker who have knowledge in Sql injection, cross site scripting extra.

I have good knowledge in PC security and white hat solutions, I'll add my notable and important threads here. I do spent most of my time in Computing section and helping in White hat section, I

have personally undergone white hat training from [Corso](#) and [Chief](#) (Both from MRT).

I'm friendly and quick learner. I can honestly say you can check my entire posts I had in Hackforums but you won't ever find any low quality posts or anything.

If I get to be in the Brotherhood, I will try my best to make The Brotherhood achieve more heights and support it as long as I can. I could support the group by writing tutorial threads in given section, participating in help threads etc, I'll be responsible and hardworking.

I was a long member of The Brotherhood earlier but due to some IRL problems I couldn't be active in my last days, so I guess I can make that up now. I have written tutorials in the name of Brotherhood in WHH section.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

Knowledge, quick learner and hardworking.

Contributive and notable threads regarding Whitehat security

Pick two sub-forums you will be regularly active in: Computer protection and security, and white hat help.

Pick the subsector you would like to be part of : Server Administration and Windows Help.

Describe your background with computers: I have been around computers for 5+ Years. I am basically my school's IT because they saw I was escalating in computer class and thought to add me to the STAT Team (Student Technology Assistance Team) I then out-performed all the other members. Internally I am very proficient and externally I am inclined but not as much as a worker at Geek Squad/Best Buy. Server Administration is something I have been doing for 3+ Years, this may not count but I am very mature for my age. During the school season I am excused from my religion class, (I am Atheist and feel very uncomfortable.) I will go down to the computer lab with the computer teacher and I will then begin to manually fix all the machines in the building for 45 minutes a day. Some examples of things I do are: Configure programs for the net-books that we got last year, remove AdWare that students downloaded onto the computers, monitor who and when people log-on to the administrator account (Only STAT members can do this), use malwarebytes to delete and quarantine any files we seem suspicious (for maximum speed on the computer, also the school trusts me more than some of their staff). I also play around with the Smart-boards we have and sound systems to fix them when there is feedback or RGB problems. I also Have many other talents but I am not willing to list them on here because if you don't want me in this group, oh well.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I think that I am very "professional" when it comes to computer-related problems I outrank the average "White-Hat" by a long-shot, if you would like to see what I do when in the public and see someone struggling at a Coffee Shop or other place read this thread here Spoiler ([Click to View](https://hackforums.net/showthread.php?tid=4299636)) <https://hackforums.net/showthread.php?tid=4299636>. Aura all I ask is for a chance at this group, I would like to prove I am worthy of being here and I will do any task you throw at me, no matter what the circumstances.

- Regards,

Orchid

Tokyo ? - June 22, 2014, 6:29 am

Pick two sub-forums you will be regularly active in:
Computer Overclocking, Customizing, and Hardware
Microsoft Windows, XP, Vista, and Windows 7

Pick the subsector you would like to be part of:
Windows Subsector

Describe your background with computers:

- General -

I've been using computers, specifically with Windows and Linux for the past 8 years of my life.

- WHH -

I'm very knowledgeable in repairs for Windows, as-well as in remove of infections like trojans, rootkits, malware, etc. I've done work for school, family, etc.

- Troubleshooting -

I've been using Windows computers so long, that I know it better than the back of my hand. Any error like a bluescreen, hardware failure, general error codes, etc. - I know how to fix, or can find how to fix any very quickly. Most of the problems I've ever had, I've fixed on my own by troubleshooting.

- Hardware -

My father has a friend who has a job as an IT Pro, and has several Microsoft Certifications. Being around him from time-to-time, he's taught me a fair bit about hardware, on top of what I learn from disassembling and rebuilding older computers I have sitting in my room and house. I know a lot about overclocking, failures, compatibility, and functions.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

Lastly, I consider myself to be a knowledgeable, and mature user. When helping people, it's also key to keep yourself understandable, and my English and grammar is what I would consider to be outstanding. Additionally, I've got loads of experience, and know how to gain knowledge I don't already have and do so fairly quickly. Lastly, I have a lot of extra time, especially during the summer, which allows me to help and support others better, and be able to solve their problems, as-well as going above and beyond in the situation at hand.

Thanks,

- Fox™

Pick two sub-forums you will be regularly active in: White-hat Section and Microsoft Windows, XP, Vista, and Windows 7 section.

Pick the subsector you would like to be part of: White Hat Help

Describe your background with computers: I have been working with computers and systems for almost 5+ years. I have also provided you with my knowledge through skype and I'm still learning alot of ways to repair and optimize new and old computer(s). I could be really useful during my timezone. While I'm a member of Brotherhood, I will also try to learn from most of the users who may have a better experience in White-hat hacking such as you, Aura or even explain or share my knowledge to a new user.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I have the knowledge required to join Brotherhood and Im sure that I will deliver a satisfied service and helping people the right way. I also have a basic and an advanced knowledge about Windows systems and applications since I'm also doing Programming in .NET Framework.

Further Information?: I am working with computers daily and I'm also doing different services for friends and for unknown people both online and irl which provides me with both reward and knowledge.

Pick two sub-forums you will be regularly active in: Networking & Computer Overclocking

Pick the subsector you would like to be part of : Networking or I can do Server Administration.

Describe your background with computers: I am currently a Network Administrator in a range of different schools. I have gained my CompTIA A+, Network+, MCSA in Windows 7 and Windows Server 2012. I've always been a big fan of computers and very interested in them since I was a little boy. I enjoy building computers and small networks at home that I can play with. I've now been a School Technician for about a year in the profession and have come along hundreds of different problems in each school to do with Networking and Server Administration.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I am a qualified technician and have experience in the sectors that I would like to help in. I have an MCSA in Server 2012 and Windows 7 so I know what I'm doing and will be happy to help people to the best of my abilities. I also know a lot about computer hardware and troubleshooting hardware problems as I've learnt it through my CompTIA A+ qualification. I hope you take my application into consideration and I'd love to be a part of your group to help the community with the skills I have.

Pick the subsector you would like to be part of : Microsoft Windows, XP, Vista, and Windows 7

[img]http://x.hackforums.net/uploads/ficons/brotherhoodf.png[/img]

Describe your background with computers: I've been using computers for roughly 10 years now, I started using computers ever since I could remember. I have always been fascinated on how computers work and operate. I never truly knew how they work until the past ~3 years when I picked up this forum. I have learned so much about how computers work and operate. I have always been fascinated to this day by how you can type on your keyboard and you input will be outputted through the screen, same stands for the mouse. It fascinates me and I'll always be fascinated on how it works. I have used Windows for ~10 years when I use to use a small HP laptop with Windows XP and ~1GB ram and ~75 HDD(I'm not as old as the other applicants unfortunately. I picked up programming where I have learned C++, PHP, HTML, CSS, JS and Java and from there I have learned how computers work(Binary)

[img]http://x.hackforums.net/uploads/ficons/brotherhoodf.png[/img]

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I'm not going to sit here and tell you why I'm the smartest here because I truly am not, but I will tell you, I am one of the most dedicated applicants in this thread. I am dedicated to helping people out with their problems from where-ever that varies, I will not give up until I accomplish my final goal of successfully helping out the person who is in need. I do this due to the fact that I use to be the same as them, I just to not know what I'm doing; I always had it there but I never really picked it up until ~3 years ago as I previously stated in my application. I know how it feels to not be-able to fix a problem you're having, so that's why I want to be there for them. I want to be-able to provide a friendly assistance and successfully help them out at the same time throughout the process of fixing their problem and or just their general questions on Windows.

If thats not longer available, Mobile Platforms SDK, etc.

[img]http://x.hackforums.net/uploads/ficons/brotherhoodf.png[/img]

Describe your background with computers:

I could sit here and type out all of my experience with computers and technology in general , but I bore you with all of that , I'm going to highlight my strengths and weaknesses.

[img]http://x.hackforums.net/uploads/ficons/brotherhoodf.png[/img]

My background with computers:

I have been working with computers since I was 8 Years old , technology has always fascinated me in every way possible.

Currently I am a student studying IT (Computer Sciences) , I love to tinker and toil with hardware and software , my speciality is hardware , My love for hardware was brought to life when I started taking small electronics apart , to see how they function.

Now I have a job as a Technical support at a local computer store , where I build , repair , and diagnose hardware and software , thus making me no stranger to these topics , that is why I chose the above Sub-Sectors.

Basically I'm a all-rounder.

[img]http://x.hackforums.net/uploads/ficons/brotherhoodf.png[/img]

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I have a everlasting passion for computers , I'm always trying my best to keep up with the latest technology , I'm a dedicated, hard working person with plenty free time to assist fellow users. I'm willing to give The brotherhood my all.

[img]http://x.hackforums.net/uploads/ficons/brotherhoodf.png[/img]

My name would look sexy as a bonus. xD

Microsoft Windows, XP, Vista, and Windows 7

White Hat Help

Apple Mac and OS X

Pick the subsector you would like to be part of: Computing

Describe your background with computers:

I'll attempt to make this brief.

When I was 11 (7 years ago) I became interested in computer programming.

I did ICT and Mathematics for my GCSE's in order to go to my preferred College and take a Computing course.

I finished this course this year and I'm fairly certain I passed that.

Covered everything from boolean algebra to delphi to hardware.

Hopefully computer programming course this September at university.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I understand my flaws and where I've gone wrong.

I'm an open minded person and I try to improve every aspect of myself not limited to programming.

I have sold many products here at HF which people have been very satisfied with (from crypters to worms to JDB's to remote admin tools).

I also had a few programming services here at HF also.

I own Windows, Mac and Linux.

I'm also into gaming :)

Here is my latest project:

Pick two sub-forums you will be regularly active in: Apple Mac and OS X - Microsoft Windows, XP, Vista, and Windows 7

Pick the subsector you would like to be part of : Microsoft Windows, XP, Vista, and Windows 7

Describe your background with computers:

Computers have been a substantial part of my life since I was around eight years old or so. Being naturally curious, I would tinker with the OS and explore the inner workings as much I could. Often times I had no idea what I was doing and, at first, seemed to cause as many problems as I handled. When the situation of my aging desktop became dire or confusing, I reveled in the challenge and refused to accept any help apart from Google. My stubbornness began to pay-off when friends of my parents started requesting that I take a look at their machines. I was successful in troubleshooting their problems the majority of the time and would spend as many hours as the repairs required. At this point I still had a lot to learn, but it was a time where my personal strengths began to really show.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I have always loved the idea of a challenge and constantly seek new problems to solve; with the constant push to simply do what I enjoyed most, I began to develop effective problem solving skills that have proven to be my greatest strength. Whether the issue at hand is completely new to me or something I have dealt with on several occasions, I am able to look at problems objectively while still relying on my past experiences to provide foresight into the situation. That being said, I still have plenty to learn and would love to be apart of this group.

Pick two sub-forums you will be regularly active in: Web Browsers, Android Operating System

Pick the subsector you would like to be part of : Web Browsers

Describe your background with computers: I've been working with computers since I was 12 years old. I am currently taking a Stanford MOOC on cryptography and passing. I am amazing with websites, etc. I am currently a Google Chrome RS. I've worked with android for years and can make apps and customize androids well.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I could brag about my knowledge of my two subsectors for hours, but I won't. What really makes me stand out from the crowd is that I am always motivated to learn more. Knowledge is power and you can NEVER have too much power ;).

Fortune - August 6, 2014, 10:58 am

General information:

Username: Mark \$ Fortune

Time Zone: EST

Country: United States of America

Pick two sub-forums you will be regularly active in: Microsoft Windows, XP, Vista, and Windows 7, as well as Computer Overclocking, Customizing, and Hardware

Pick the subsector you would like to be part of : Microsoft Windows, XP, Vista, and Windows 7, but I can also do OSX and Linux if needed

Describe your background with computers:

I have been working with computers since I was 8 years old. I ran my own computer business for 6 years, and I was employed as my high school's tech support in return for course credits. I have worked with 3 flavors of Linus, OSX, and every version of Windows since 98. I am currently majoring in Computer Science and Information Technologies. I have worked in web design, computer repair, and many other fields.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I work as tech support by profession. I have a strong dedication to working with computer systems, as it is my forte and my passion. I try to constantly learn more and stay up to date with new technology and technological advances.

Aura - August 6, 2014, 3:22 pm

Updated the OP, need 3 members for the *nix sector. Will review the past applications of members that applied for that sector.

Jay? - August 7, 2014, 9:54 am

Username: Sempiternal (Old name Katsurou, Remorse)

Time Zone: PST

Country: USA

Pick two sub-forums you will be regularly active in:

Linux Subsector

Windows Subsector

Pick the subsector you would like to be part of :

Linux Subsector

Describe your background with computers:

5 years of handling computers including updating and maintaining PC hardware

5 years handling windows systems including optimization, virus and malware protection, general troubleshooting

3 Years Linux knowledge including multiple distros (Arch Linux, Debian, dreaded gen2, Puppy Linux, Slackware Linux, Red Hat)

Basic understanding of various programming languages including bash, python, php, javascript, and more.

Basic understanding of thorough malware removal and analyzing various types of infectious software

Intermediate Network security experience

Intermediate Web application experience

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I have an intermediate history with both Windows and *nix machines that has allowed me over the years to both troubleshoot and repair numerous problems I have come across on others machines as well as my own. I have tested a variety of distros for Linux and have a base experience in most of the front runners. I can be online most of the day and offer assistance in a swift and timely manner. I give well throughout and thorough answers and will do my best to ensure the user is assisted whether it means via PM, Skype, Jabber, or TeamViewer.

Anything else?: Excuse my lack of graphics. I found it rather repetitive to use the same images every other member was using. I can add those on if needed.

Roger Waters - August 10, 2014, 5:10 pm

Here are the current openings for The Brotherhood's Computing Sector:

1 Windows Sub sector

3 OS X Sub Sector

2 Linux Sub Sector

0 Hardware Sub Sector

3 Networking Sub Sector

2 Server Administration Sub Sector

Pick the subsector you would like to be part of :

OS X

[img]http://x.hackforums.net/uploads/ficons/brotherhoodf.png[/img]

Describe your background with computers:

I have been interested in computers since I was 10 years old. My dad used to build PC's as a hobby, and he slowly taught me how to do it, and taught me more and more about the hardware side of computers. Ever since then, I've been hooked. I.T was always my best subject through school, and I was always known as the student to go to when someone had an issue. The advancement in technology with computers has always fascinated me, I try my best to stay up to date with the latest news and such. Since about 2 years ago, I made the switch to Apple computers. Before then, I was always against them, always bagging them. I said what most people say, how you are paying for the brand, how Apple is overpriced junk, all of that. I swore to myself that I'd always stick to Windows, and I'd never touch Apple. That changed when I got my first iPhone, and I fell in love with the way Apple develops their products. I ended up buying a Macbook Pro about a year ago, after lots of research. Also fallen in love with their computers now. I always talk about how Apple goes into so much detail into there products and such, you could call me an Apple fanboy now, because well I am one. Without rambling on too much, ever since my swap, I have tried to learn as much as possible about OS X, and iOS. I still use Windows occasionally for a few certain things though. I think if you are a genuine lover of computers, then you cannot be biased, which is what I was against Apple. Now that's not the case, I find positives and negatives in both of them. A couple of months ago I also started to get interested into Linux, and plan on exploring the capabilities of it in the future, and hopefully, learn some new things.

[img]http://x.hackforums.net/uploads/ficons/brotherhoodf.png[/img]

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I believe I stand out more then others in the OS X sector because I have taken the time to learn and understand the way OS X is designed, the way it runs, and the way problems can occur. I see a lot of threads in the OS X section that go unsolved because some of the users who post there either don't know anything about the issue, or don't take the time to research about the issue to help the other user. There's some good users in the section, that know their stuff, but I don't think there is enough. I check the OS X section regular, to see if there is any new threads, and if there is, I always try to help the user out as much as I can, because I would love it if more people gave Apple products a chance. The Windows section receives a lot more detailed help then the OS X section,

and I would like to lend a hand in changing that. I have also had experience with troubleshooting when it comes to OS X and iOS. I have owned separate devices simply for the use of experimentation, which has allowed me to grow my experience. I will always be willing to help anyone out with any problems they have to the best of my ability. If I can't solve their problem, I will try and research the issue more, so they can get a correct answer. I'm not saying I'm an expert, but I just love helping out other Apple users.

PerkUp - August 11, 2014, 1:54 pm

Hello Aura I was wondering if you have a student program, as I am very interested in learning different things revolving around this?

Thanks.

Pick two sub-forums you will be regularly active in: Linux, FreeBSD, and Unix Flavors. Am currently attempting to see where I fit in the Networking, Routers, Switches, and Firewalls sub-forum.

Pick the subsector you would like to be part of : 2 sectors, actually if possible. Server Administration and GNU/Linux, FreeBSD and Unix Subsector

Describe your background with computers:

I don't have any background with computers. I have tons of experience and a rich background with servers, though. I began learning the ways of Linux when I was 14 years old and have mastered my ways with the very kernel of Linux itself. I am a keen and ambitious sysadmin wherein I've worked with servers for an estimate of 3 years. I am fluent in the distributions of Linux such as Debian, Ubuntu, CentOS, Fedora, RHEL and a tad bit of Linux Mint. My specialization within Linux servers is to secure/harden the server to prevent sophisticated attacks originating from wannabe (or real) hackers, although I am great with advanced system management.

My skills with networking is not a thing to be reckoned of, but I know my ways of utilizing it for my server such as routing, inbound/outbound rules (firewall, iptables w00t), basic null routing and much more. I am also learning more about networking to take part in a Cisco certification exam through courses from CBTNugget ?

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

Well, I don't stand out better than others because I'm a firm believer and supporter of equality among one and all :)

What makes me more qualified is of my superior knowledge (lol idk how to explain) in which I can contribute to others through helping, tutorials, documentations and much more.

if you see my posts rarely in those 2 sub-forums, is because in the linux sub-forum there is rarely any help request regarding commonly used distros and all about backtrack, and kali x-x. About networking, it's all port forward pls pls x 4. Hope you get me as I'm trying to find my way into those 2 boards. I suck at Kali/BackTrack FYI ?

Pick two sub-forums you will be regularly active in:

Apple Mac and OS X, White Hat Help

Pick the subsector you would like to be part of :

OS X Subsector

Describe your background with computers:

The first computer I used was an iMac, it was the family's computer and because everyone downloaded stuff, logged into sites, and just used it, everything was a mess. It was slow, cluttered, and quite frankly plain and boring. No one could agree on a wallpaper, screensaver nor where things went. My break came when I got my first computer. The first computer that was my own was a 2007 Macbook. It was filled with crap because it was my siblings before me. I always had seen those cool PCs with sick wallpapers and desktops, and I wanted that. I also had the task of cleaning all the junk my sister had left for me. After that, sadly I learned OS X is not too customizable, which

led me to find interesting ways to make mine unique. Unique in how it looked, how it was organized, and how to keep everything the way I wanted it.

This led to me learning how to do lots of things on OS X to make the laptop my own. I never went to a class to teach me how to do these things, I just experimented with different tools and read anything which I could learn from. To make a long story short, over years of doing this I learned a lot about security, customization, the use of different applications and other things. I try to help anyone in the Apple Mac and OS X section that I know a fix or a possible solution. I tend to stay away from topics I don't know about (such as hackintosh) to save my and the OP's time.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

I have been using iDevices and Macs for years, and I have been tinkering with them that whole time which helps to understand problems and their solutions better, instead of "downloading this and clicking that works". I didn't work at Apple, nor do I have a certification from them, I just am a person who knows Macs and OS X very well. Whether it be overheating from a game, customizing your desktop, or some weird problem with Bootcamp. Ill try to help.

This is my first time applying to a group, and the OP was very encouraging so I thought i'd give it a shot. Thanks for taking the time to read this.

Loki123 - August 15, 2014, 11:15 pm

If you are interested in the Linux/FreeBSD & Unix Flavors section it would help a lot if you would go to the Linux/FreeBSD & Unix Flavors section here and be active at least until those 2 empty spots are filled. That would give us a good view on how helpful you are instead of basing everything on only your application in this thread. :)

Pick two sub-forums you will be regularly active in:

White Hat Help

Linux, FreeBSD, and Unix Flavors

Pick the subsector you would like to be part of :

GNU/Linux, FreeBSD and Unix Subsector

or

White Hat Subsector

Describe your background with computers:

I study Information Technology, almost finished my Master Degree.

I have been working with computers over 4 or 5 years now. I liked troubleshooting them and maybe call my self a geek ?.

I have been working more with programming languages, trying to master them: Java, C++, Python and now C#.

Having more time with school ending I was able to work more in web development.

Already knew HTML, CSS and php. After 3 months I managed to learn HTML5, CSS3, JScript, jQuery, Wordpress, Joomla and now it's time for Bootstrap.

I can do graphics too. Main tools: Adobe Photoshop and Adobe Illustrator. I also tried Digital Painting but it's very hard without a Wacom so I gave up.

I have good experience with Unix systems. Mostly because I have had a shitty PC all this time. At least it served for something.

I think this covers it all. I've been trying to learn a bit from everything.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

Being a polite guy maybe and trying to explain things with every step so it can be easy for everyone to follow.

Thanks for viewing my application.

Kind Regards,
Makaveli.

ItsATumor - September 15, 2014, 1:46 pm

Really in need of people for the OS X subsector. When Aura gets back hopefully he will update the OP.

Mainly Apple Mac and OS X, then some Microsoft Windows, XP, Vista, and Windows 7

Pick the subsector you would like to be part of :

OS X Sector

Describe your background with computers:

Ever since I was a young child I've been interested in computers and technology. My grandad, who is extremely experienced in computers, taught me how to take apart and put together an entire Desktop at the age of 11. I've always been fascinated with technology and how things work on the inside, not just the physical aspects of it. Everything with technology has always come easy to me, I'm always helping friends/family out with their technology problems (which is a lot). I have an iMac, Windows 7 Laptop, and Windows 8 Desktop all which I'm completely familiar with. Back when I was younger I would charge my friends a few bucks for jailbreaking their iPhone, I'd help my all my teachers out with their computer issues, anything that had to do with technology I'm involved in. As of now in school I'm taking Web Design and Computer Programming, which I will take the advanced course next year.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?:

My work ethic is, what I claim to be, a lot more efficient than others. All my friends / business partners know that anything I'm a part of, I put 100% effort into. I love being involved in as much as I can, and I think this group will help me get more involved in the things that I love to do.

Pick two sub-forums you will be regularly active in: Microsoft Windows, XP, Vista, and Windows 7
Computer Overclocking, Customizing, and Hardware

Pick the subsector you would like to be part of : Would love to be part of the Windows subsector again.

I was part of it a couple of months ago and even was leader for a while.
Was removed when shit went down on my account.

Describe your background with computers: I have been using computers since I was 7 years old. When I was 8 years old me and my brother together had 3 computers; 1x Windows 95 Pentium II, 1x Windows 98 Pentium III (tony hawk times!), and a Apple computer.
I have always been a lot into computers, from building computers for myself and fixing issues to repairing the broken computer of my grandparents.
Whenever I or someone else would run into a issue with Windows I would be able to fix it rather quickly without damaging anything, such as files.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I am far more knowledgable than the average Windows user, and still continue to learn more every day. I also keep myself up to date with news around technology as much as I can.

I'm going to start posting there tomorrow mostly no post anymore in that section.
Only posts in junk were pruned. Not really sure how you expected to get away with that lie.

Is activity in the corresponding sub-forum required? I'm quite knowledgeable in OS X but I don't really do anything in that section because it's pretty much dead.

Roger Waters - September 16, 2014, 4:50 pm

Yes, it is required. We won't be able to tell that you know anything about the topics unless we can see that you know what you're talking about. Activity plays a huge role in whether you can become and stay a member of our sector and group.

+Wolf - September 21, 2014, 3:41 am

What's Your Username on Hack Forums?:

My Username is Tri?ngle. Currently does not hold any meaning towards myself.

What's Your Current Timezone You Live In?:

I'm on Eastern Time (United States & Canada) UTC -05:00

What's Your Current Country of Residence:

I currently have lived in Canada, Toronto ON for many years ever since I was born.

Pick two sub-forums you will be regularly active in:

I would be active a lot in Computer Protection and Security Alerts and also Windows 8, RT and Surface.

Describe your background with computers: I have grew up around computers and ever since I was little I was taught the basics, and then when I was getting older I started to learn more professional work such as some programming knowledge, and Malware removal. I follow in my dad's footsteps and I learn something new everyday, no matter it relates to networking, applications or even cracking phones. I also enjoy helping people when it comes to Troubleshooting errors or even Compatibility errors. I use to (a few years ago) build customers computers all the way from scratch with my father and we made quite a bit of money meaning I have quite a bit of knowledge when it comes to Hardware, Customization and even more such as Routers, and even breaking through Firewalls using exploits, and kits. I have also helped tons of people here.

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I couldn't really stand out more then anyone else but I am always looking to help someone and I will be posting more then three or four threads a week depending on the matter and section. I will also remain active with over 50-100 Posts per day on average. I will also be making a Support desk soon with another member and we can possibly do it in the name of this group. I hope that I am picked and make sure to checkout my recent threads and get ready for more to come in the future. All tutorials that I make will be related to Windows 7/8 and even Windows Vista and Windows XP.

Pick two sub-forums you will be regularly active in: Linux, FreeBSD, and Unix Flavors, White Hat Help

Pick the subsector you would like to be part of : Linux, FreeBSD and Unix Flavors

Describe your background with computers: Been messing with them for a long time. I was always attracted to linux, but it took a bit for me to completely switch over. Now I have been coding, and using Linux for a long time so I know a fair amount about it,

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: Well first let me tell you a little about me first.

Hello :) My name is Jared. I am a very optimistic, and happy person. I look at the positives in life, but I don't ignore the negatives. I call myself quite lucky because I have found one of my true goals in life at such a young age. Making people happy is all I want in this world. If I were to die, I would be happy as long as I made a couple of people smile along the way. Which sounds extremely cheesy and cliché but it's who I am. I would defiantly describe myself as a people's person. People say I have a way of telling when something is wrong and for some reason everybody can be really open with me without even knowing me for very long.

I guess you could call me an emotional person. Not in the way you might seem it's just I have very strong emotions for my friends and family. I love way too easy (which causes a lot of trouble with my girlfriends).

I don't have mild emotions I have extremely strong ones. When I'm happy (99% of the time) I am really happy, when I'm sad, I am really sad. There isn't much in-between. But then again it's a rare occasion when I get mad or sad (this is in real life. Online I tend to get a bit more bad because I let trolls get to me way too easy)

I spend most of my time playing on the computer and hanging out with my friends. I go to a lot of parties but only sober because I don't need to be high to have fun, hahahahah :) I try to be friends with everyone because I love people so much and human interaction. It defiantly did not used to be that way. For a long time I suffered from deep depression and used to hide in my room all day. It sort of switched, my primary emotion used to be sadness with little to no happy and once I hit freshman year (I'm a senior now), through amazing experiences I switched my primary emotion somehow to happy

Now will my personality and love for people I just be a huge help to the group and subsector because I truly love people and helping others!

Sorry for typing so much hahahah :)

[img]http://x.hackforums.net/uploads/ficons/brotherhoodf.png[/img]

Describe your background with computers: I have a large background with computers. When I was born I was practically born into a computer learning environment. My parents were computer-wiz's. I started on a computer at 2-3 years old, playing old games with my father. As time went on I got better and better of course. I started Linux about 3 years ago and am quite familiar with it. Currently I am going to a charter highschool. In order to get into the school you have to have a 'major'. My major is computers; therefore few of my classes (I have 8) are computer related.

[img]http://x.hackforums.net/uploads/ficons/brotherhoodf.png[/img]

What makes you stand out better than others to make yourself more qualified to be a part of this sector?: I am more qualified because I have been parts of Linux forums before. Although I haven't been a part of these subsections on Hack Forums (which will change most definitely, whether I make it into the group or not) I have been a part of forums dedicated to these subsections. My experience with Linux started in 2011-2012ish when I started to get interested in hosting servers. It turned into hosting servers to becoming a part of every aspect of the operating system(s). I stand out because I have used and currently use Linux as a desktop and server operating system for various of my machines. With this comes great experience with the system and the ability to help other members to the best of my ability.

Thank you for considering me :)

Aura - October 4, 2014, 5:41 pm

Recruitment closed for now, will open the thread as soon as the clean-up of our current members is complete.
