Thread: [\[VB.NET\] How to add EOF support \[TUT\]](#)

xSilent - May 11, 2010, 12:47 pm

I posted the functions, but I didn't show how to use them.

First make a string called TheEOF or whatever under your form name example:

```
Code Public Class Form1
    Dim TheEOF As String
    Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As System.EventArgs)
        Handles MyBase.Load
```

```
        End Sub
```

Once you've done that add this read EOF function (We'll be writing it a different way)

```
Code Public Function ReadEOFData(ByRef FilePath As String) As String
    Dim EOFBuf As String
    Dim IPos As Integer
    If Dir(FilePath) = "" Then
        Exit Function
    End If
    Dim ReadFile As String = IO.File.ReadAllText(FilePath)
    IPos = InStr(1, StrReverse(ReadFile), GetNullBytes(30))
    EOFBuf = (Mid(StrReverse(ReadFile), 1, IPos - 1))
    ReadEOFData = StrReverse(EOFBuf)
    If ReadEOFData = "" Then
        Exit Function
    End If
    Exit Function
End Function
Public Function GetNullBytes(ByRef INum As Object) As String
    Dim Buf As String
    Dim i As Short
    For i = 1 To INum
        Buf = Buf & Chr(0)
    Next
    GetNullBytes = Buf
End Function
```

I modified my function from VB6 to look more like VB.NET so some of you won't complain about it

Now in your file open dialog, after the file has been opened add this

```
Code TheEOF = ReadEOFData(OFD.Filename)
```

Now at the end of your sub when the file is crypted add this

```
Code If TheEOF = Nothing then
    MessageBox.Show("File Crypted!")
Else
```

```
IO.File.AppendAllText(OFD.Filename, TheEOF)
MessageBox.Show("File Crypted With EOF!")
End If
That is how you use well any EOF function
```

This should help any beginner coding a crypter in vb.net or C# (Just convert it)

xSilent - May 11, 2010, 3:10 pm

NOTE Only write EOF after everything else was written to the stub *NOTE*

iRtehLeet™ - May 11, 2010, 3:12 pm

Finally, we needed a thread like this for the noobs that can't put together your old thread.

Rating added :)

Bitwin - May 11, 2010, 3:17 pm

Thanks, great tutorial. I thought about writing it myself after you explaining it to me but I didn't do it :p

xSilent - May 11, 2010, 5:26 pm

52 views and only 2 comments, really.

Jeck - May 11, 2010, 6:34 pm

This seems simple but I don't know how to declare it correctly. Incorrect when OFD is declared. Hehe...

[IMG]http://i39.[censored].com/2r782ex.jpg[/IMG]

Thanks for the share. =p

Threadlocks - May 11, 2010, 6:44 pm

oFd is open file Diangnol

xSilent - May 11, 2010, 7:05 pm

Thanks for the share. =p

I'm not even going to answer this, this proves that your trying to rip this code

Threadlocks - May 11, 2010, 7:21 pm

i got a error .. i pm you

five star added + rep added send a pm

krayon - May 11, 2010, 7:35 pm

Good job killerpanther, I haven't tried this out yet but im sure it will come in handy ;)

Jeck - May 11, 2010, 7:36 pm

Ok. Nevermind, I will try to figure it out myself. ?

Just experimenting some codes eventhough I'm noob in .net.

Btw, thanks.

Threadlocks - May 11, 2010, 7:39 pm

it worked on command.com which have EOF support it work like charm thanks aloat

jhours - May 17, 2010, 12:02 pm

Thanks for this man you just saved my life :) now to trawl through the code line by line char by char xD

codepoet - May 17, 2010, 12:07 pm

Thanks man we really needed a tutorial on this.

-crow407

Toxic Asshole - May 17, 2010, 12:51 pm

Coding looks a little fualty can cuase an error.

Sikandar - May 18, 2010, 9:17 am

sec....

shouldn't it be SFD.filename instead of OFD?

cause if its the browsed file

then its adding EOF to the server after transferring

it to the stub?

xSilent - May 18, 2010, 1:50 pm

(May 18, 2010 09:17 AM)Sikandar Wrote: [\[CITE\]](#) sec....

it to the stub?

Right it should be SFD, I was kinda tired when I typed this out

kbhawkman - May 19, 2010, 9:40 pm

I am sill getting an error with SFD saying not declared.

xSilent - May 19, 2010, 9:58 pm

(May 19, 2010 09:40 PM)kbhawkman Wrote: [\[CITE\]](#) I am sill getting an error with SFD saying not declared.

really

SFD is just an example, SFD = Save File Dialog aka The name of the save location

kbhawkman - May 19, 2010, 10:11 pm

(May 19, 2010 09:58 PM)xKillerxPanther Wrote: [\[CITE\]](#) really

SFD is just an example, SFD = Save File Dialog aka The name of the save location

Oh ok, I only have an OPEN File Dialog. In my crypter you chose where to save your file. So what should I do? Sorry I am still not a master at vb.net

flAmingw0rm - May 19, 2010, 11:54 pm

crypter you chose where to save your file. So what should I do? Sorry I am still not a master at vb.net

Add a Save File Dialog and rename it to SFD?

Threadlocks - June 1, 2010, 11:42 pm

i am bumping this thread up

KrYpToNiTe™ - June 2, 2010, 4:23 am

Thanks for the tut I now understand how to use eof properly :)

julian - June 2, 2010, 4:35 am

ByRef INum As Object

Blurgh. It's an Integer. It just slows your code down to use Object because the runtime will have to box the value type. You shouldn't need to use Object very often, especially since generics came along 5 years ago.

Weakky. - June 2, 2010, 1:07 pm

i have an error with the 1st "exit function" and With the declaration "buf" ... can you help me please ?

TheLocksmith - July 20, 2010, 8:20 pm

Thanks, this helped with my crypter, I'll be sure to add credits!!

Gegi - August 11, 2010, 8:29 am

So work fine when I inject to a program, like notepad.exe. But my cybergate copy the simple notepad.exe. When I setup my RunPe to inject to my program (crypted.exe), the crypted.exe inject to crypted.exe and the crypted.exe inject to crypted.exe and the crypted.exe inject to crypted.exe and the crypted.exe inject to crypted.exe etc. But this the Cybergate copy good exe, but doesn't work. In my taskmanager 10 crypted.exe :O How can I fix it, to inject only 1 time. Help!

Gegi - August 11, 2010, 10:27 am

I modified my stub and I find the good way :D

kas - August 28, 2010, 8:10 am

I added your module (also in the credits) and added my path but TheEOF variable is empty, do not take anything in the file. I probe with Bifrost and I worked, I can be doing wrong?

I made this the latest of everything

Thanks

EDIT:

Why? chr(0)?

For i = 1 To INum

 Buf = Buf & Chr(0)

Next

it won't be chr(i)?

thanks

I'm sorry, but I lost you there.

m-y - August 28, 2010, 12:01 pm

Thank you for this [TUT]

But I have a question Can I add this code on my source crypte
I've added class in my Project And I've written this code
But I do not know where to type this code[TheEOF = ReadEOFData(OFD.FileName)]

[\[img\]http://www.m1111.net/uploads/images/m1111.net-88280d30de.jpg\[/img\]](http://www.m1111.net/uploads/images/m1111.net-88280d30de.jpg)

Maneater reply

davae93 - October 8, 2010, 9:01 pm

heres an example where to put it which is in the textbox, which is the location of your file you want to be crypted

TextBox1_click was used as button, so when textbox one is clicked it opens Openfiledialog

Code Private Sub TextBox1_Click(ByVal sender As Object, ByVal e As System.EventArgs)
Handles TextBox1.Click

'Creates and opens a open file dialog.

With ofd1

ofd1.DefaultExt = ".exe"

ofd1.Filter = "Executable Files (*.Exe)|*.Exe"

ofd1.FilterIndex = 1

ofd1.FileName = ""

If ofd1.ShowDialog(Me) = 1 Then

TextBox1.Text = ofd1.FileName

F = .SafeFileName

TheEOF = ReadEOFData(ofd1.FileName)

End If

End With

End Sub

Kill4joy KJ-Vulcan Tools - October 8, 2010, 10:54 pm

really nice tutorial ill give it a thumbs up*

newbie223 - October 8, 2010, 11:22 pm

lol some people do not even know how to fix that small problem n nice 1 m8.
this should end the nvr ending question of some people looking for eof

NoNoMoMo - October 9, 2010, 12:23 pm

Very nice. Now its nothing big and its not an error its a warning, And i know i could use it anyways
but i want to get rid of them aha, the warnings are

Function 'ReadEOFdata' doesn't return value on all code paths

&&

Variable 'Buf' is used before it has been assigned a value

Any help is much appreciated !

Galaxy Wave - October 9, 2010, 12:26 pm

Thank you for the great tut.

tonig123 - April 18, 2011, 9:26 am

nice tutorial, very helpful! ^^

DeathStar™ - April 18, 2011, 10:00 am

(Apr 18, 2011 09:26 AM)tonig123 Wrote: [\[CITE\]](#) nice tutorial, very helpful! ^^

Please don't post in older threads.

We only want new threads at the top, boy.

- Thank you ?

noxxio - August 9, 2012, 3:45 am

Hey,

one question if i want to use this in a Codedom Crypter should i paste the last Snippet before ICompiler compiles it? Or where else?

But by the way nice Tutorial :).

pupp3t - May 27, 2013, 6:18 pm

```
Dim ReadFile As String = IO.File.ReadAllText(filePath)
```

i get a empty path when debugging trying to open the dialog to add a file. Any help oh and im using Codem source to try it out on.

Cody8295 - May 27, 2013, 6:59 pm

(May 11, 2010 05:26 PM)xSilent Wrote: [\[CITE\]](#) 52 views and only 2 comments, really.

Not everybody has something to say, most people don't even read the thread, they just click on it to make it appear as read.

EDIT: Andddd I'm dumb, responding to posts from 2010. Thanks to whoever gravedug this.

pupp3t - May 27, 2013, 7:10 pm

no problem ahaha anytime i was looking for a eof

xSilent - May 27, 2013, 9:07 pm

This thread is absolutely terrible..
