Well, why don't you simply use the official download page?

This would be [here](#).

Chrome says it's malicious?

Sorry man new to this stuff.

Sorry man new to this stuff.

Its a "hacking tool" therefore almost every antivirus or browser will call it malicious

Sorry man new to this stuff.

Every 'hacking'-tool is 'malicious', else it won't be a hacking tool. :)

You must disable all your Anti-Viruses, else it won't work.

You won't find any hacking tool that won't be detected by an AV.

Good Luck!

What do you mean a trusted download.

Just get it from the original website Oxid.it

Well dude... Google chrome always detects inject dll's, hacking tools, etc.

It's normal so don't worry :D
