Faurax Latest Version Pictures:

Creator of client: [?Rigamortis](#)

Every version of Faurax: [Faurax 2.0](#)

[Faurax 1.9](#)

[Faurax 1.8](#)

badvibes - April 6, 2014, 1:14 pm

this version doesnt look that bad (gui wise)

Washin - April 6, 2014, 1:14 pm

No offense, but I've heard of Rigamortis. And he coded for Team Rose red. Is this their client? Because I heard he sucked. And doesn't it suck? Rose red did.

He's a skid and has no idea what he's doing.

SIM-1576816 - April 6, 2014, 1:16 pm

Oh, why didn't he keep the laced + reliant GUI. Looked alot better then this.

CCBM - April 6, 2014, 1:20 pm

Rainy, apparently this is poisoned, according to Riga. He just sent me this on Skype

[5:31:38 AM] ??Rigamortis: Enjoy your monthly ddos

[5:31:41 AM] ??Rigamortis: also the client is poisond i have all accounts i stole your ddawg account :)

Sooooo yeah.

I like what they tried to go for there, but its execution didn't work. Just looks like a awkward space filler.

However, if they wanted it to be a little bit better, they could have it dynamically scale to the panel's window title's size.

He still has that, this just isn't the newest version (despite what the thread title says).

Just Discontinue Faurhax in total and start a new one
Pull a EP.

His new version is actually pretty good (better Gui, Vanilla Crash, blocker for "Floating too long" kick, and such).

Thornzzz - April 6, 2014, 1:45 pm

So was the goal to make it look like shit or...?

DFayth - April 6, 2014, 2:32 pm

The releases above are outdated.
Faurax 2.7's being worked on by it's owner.

He gave me half of his database, I'm proud to say I got about 200 alts to share with him now. The passwords are being changed pretty fast, but I'm sure that's just Riga changing the passwords.

Lol, i got that database aswel, its not from his client. But from the alt stealer in ZRB's clients..

Nope, talking about the other one. I've already asked him if I could get a link to ZRB's, simply said no to me.

uRgey - April 6, 2014, 5:02 pm

So dis gon stel my accounts? I dnt liek dat

Nettle - April 6, 2014, 5:08 pm

If we install this, we will get are account stolden?

Why would anyone want to download this.

ddong - April 6, 2014, 5:15 pm

Holy shit. I'm laughing all the way through the src.

EDIT: Riga is probably bluffing, I've gone through most of his classes and haven't found a "poisoned" madoohicky.

A new GUI? Who really gives a shit?

A vanilla crash exploit? I have like 10 of these.

A vanilla fly bypass? Again who really gives a shit about that? Come again when you have a NCP fly bypass (in which case I wouldn't really give a shit either considering fly isn't that special in my opinion).

River - April 6, 2014, 5:41 pm

I was bluffing, I wouldn't do that

I found his account in that alt database I found on ReesZRB's website

Also this version was somewhat shit but, that doesn't mean you can leak it...

I never gave you permission to leak it, So please quit.

Also new Gui

You're so fucking gay. Stop trying to make clients, you suck and won't ever be good at it. Also, why is every gui you make God-awful?

<https://puu.sh/7YUFO.PNG>mKay mind if I ask you what my account? Also, I don't need your permission to leak your client. It shouldn't even be a private client because 95% of the client is not your coded and the other 5% was you asking people for help.

With a few changes, that would actually look fairly good. As I mentioned in an earlier post aligning this blue streak to the text length would make it look more uniform / professional.

Perhaps using only two fonts. One for the panel title and another for the panel text. Also, gray on gray looks weird to some people.

These just don't strike me as button. It feels almost shapeless without the clear definition of borders (for the off state mostly).

Personal opinion, but the stark color hue contrasts in arraylists look bad.

.mbe - April 6, 2014, 6:32 pm

I dislike that GUI alot. It's way to black'n'white ya know.

As the client was Not meant for public release but, my own use

It will not be very user friendly to others.
I have the keybinds set to how I need them
