Thread: [!SPREAD RATS TO MILLIONS! \(EASY\)](#)

opsafrica - April 7, 2014, 12:56 pm

In this tutorial I will show you how to spread your trojans/viruses etc. I will show you many methods, and later you choose which one you are going to use.

What Is Spreading?

Spreading is the way of your trojans/programs/viruses circulates around the Internet. The point of spreading is to put something hard to find, which people like it. It's about what all people want, but don't have it yet. Well the goal of spreading is to get more victims to your RATs/Keyloggers whatever.

Getting Started

Well, to spread you will need a program to bind your virus with. If you want to get more victims, try to find a small program, avoid large programs. If you don't have any ideas search around the Internet, you will find a lot of fake programs, such as KeyGenerators, Gold Hackers etc. Other way is to make your own programs, it's easy all you need is a little programming knowledge or you can find good source around here. Ok, now the main part if you want your spread to be successfully is to make your viruses FUD by AVs. To make your viruses use a binder or crypter. Most of public binders and crypters, are detected even if they are FUD will be detected soon, so the best way is to use a private stub, and it will stay longer FUD. There are many Crypters and Binders you can use, just go the Sellers Section, or search around the Internet! Make sure to test your virus after crypting or binding, because some binders and crypters corrupt the files.

Hint for beginners [If you already know this, skip this part]:

A Crypter is a programs that makes other programs UD or FUD by encrypting them.

A Binder is a program that makes other programs UD or FUD by binding them with another file.

UD means undetected, so only a few antivirus programs detect it. FUD means fully undetected, so no antivirus detect it.

How and where to spread

Well guys, this is the part who all were waiting for. I will show you a few methods how to spread you viruses and trojans.

1. Omegle

Omegle is a brand-new service for meeting new friends. When you use Omegle, we pick another user at random and let you have a one-on-one chat with each other. Chats are completely anonymous, although there is nothing to stop you from revealing personal details if you would like. You can use Omegle auto spreader while you sleep or when you are free. You can find Omegle Spreader here: <http://uploading.com...e+Spreader.exe/>

2. YouTube

YouTube is a video sharing website on which users can upload and share videos. Make a 'short' video, no longer than 30 seconds or a minute. In the description, make a short tutorial on how to use the program or the keygen you binded your virus with, add the features of the program and put a download link of your virus. Take a picture as proof aswell, that will make people trust your virus more. Make sure you use a good file hosting, because for example # won't let them download it first time, so people will get bored and won't download. I use mediafire, awesome host and allows you to see the downloads aswell.

3. Garena

Garena is a free multifunction game platform that allows gamers to interact, organize matches, and play their favorite games online with tens of millions of players. First download Garena client from [HERE](#). After you download Garena install it, and open it. You'll need Garena account, you can create one in 30 seconds, if you need an account, PM me. Ok, people in Garena are really stupid and will download your viruses for sure if you make it looks real! You can bind your virus with War3 MapHack, you can find here [HERE](#), or use other hack tools depends which rooms you are going to spread. Ok, after binding your file go to each room and enter your download link. Example of how I do it; "www.multiupload.com/239h8hfsdf - Free MapHack , EXP Hack , Ladder Win , and more!" and I get 500 downloads per day.

5. Forums

This is a really great method and you'll get a lot of downloads everyday. First of all you'll need Multiposter Ultimate Version (Recommended), or you can use the trial one which is limited with 10 forums only.

Ok, if you are going to buy the full version, you will need forum list. you can use google the more the forums are, the more are the downloads. You will need templates, search Google! Now you have to register to the forums, I know it's boring but you have to. To get rid of it, use Roboform which you can get it from <http://www.Roboform.com>. Install it and open it, and start registering. Ok, after everything is done, start posting things like WinRAR, Crack versions of programs, etc. To get more downloads use screenshot of the program in the thread. If you have troubles with screenshots, download "Icsnap" from [HERE](#).

It is a useful tool, which upload pictures images from your desktop to imageshack, directly. Ok , now download "Easy Post creator", it's a useful tool aswell which saves your posts.

Now you can save your posts, and you don't have to rewrite them twice just copy them from Easy Poster and post them in other forums.

4. Torrents

Torrent is a small file (around few kilobytes) with the suffix .torrent, which contains all the information needed to download a file the torrent was made for. You can use public torrents such as:

<http://www.#.org>
<http://www.mininova.org>
<http://www.demonoid.com>

Or, you can use private torrents , they are the best because people are trustworthy there.

5. Facebook

Facebook is a social utility that connects people with friends and others who work, study and live around them. You can use facebook for spreading your viruses aswell. Join some groups and upload your virus to any hosting website, and tell them that this is a private photo viewer or something like this, and they will trust you.

6. mIRC

The most popular shareware IRC chat client for Windows. You can use it to spread you viruses, join any network and start spamming with your links in all channels saying free psyBNCs, Eggdrops etc, most of people will download it, depends which network you will use, some networks are made for gamers etc.

1-2-3-5-4-5-6 Seems legit :P. Nice tutorial, but this is definately not the first time I see these spreading methods on HF. By the way, #.org is not a valid site.

immortalwon - April 8, 2014, 11:07 am

This is the same rehashed spreading method being posted over and over lol.
