Thread: [\[TUTORIAL\] How to mine OMC with either a CPU, GPU, or both!](#)

'Snorlax - April 8, 2014, 3:54 am

Table of Contents

Creating an account on a pool

Creating a worker

Downloading a miner

Extracting the archive

Creating the configuration

Optimization

Using the miner

Troubleshooting and help

First off you need to register an account on a pool. I recommend using [Doctor Blue](#)'s pool which you can find a thread about [HERE](#).

If you are using his pool, head over to <http://pool.omnicoin.cc/> and create an account.

You can use any username and any email, but you need to have access to the email if you need to change your account information.

After creating your account, head over to

<http://pool.omnicoin.cc/index.php?page=account&action=workers> and create a worker.

The worker name can be anything, but I recommend something simple as miner or omnicoin.

Type in a password as well, but it doesn't have to be any of your secret passwords, because it will be visible on the website, and it will be visible in your configuration file (more about that later).

When you have created a worker and a password for it, it should something like this:

Great! Now you need to download a miner. I copied what is written on Doctor Blue's thread, because it is so correct that I couldn't do it better myself.

CGMiner 3.7.2 - [Download](#)

It is important that you use version 3.7.2, as newer versions don't support GPU mining nor script

mining and those are the things you need. CGMiner is one of the best miners available for AMD GPU's, and AMD's hardware is generally better than NVIDIA when it comes to mining, so pick CGMiner if you use an ATI/AMD graphics card.

CUDAMiner - [Download](#)

CUDAMiner is a fork of CGMiner which specializes in mining with CUDA cores. A CUDA core is the same as a stream processor or ALU, only NVIDIA has made it 'smarter' and capable of more complex things. This means there are fewer of them on each graphics card as they're naturally more expensive to produce and physically larger to fit on the die. This is one of the major reasons why AMD outperforms NVIDIA. Get CUDAMiner if you are using NVIDIA graphics.

Pooler's CPUMiner - [Download](#)

If you don't have a graphics card (using onboard or integrated graphics instead) your only option is to mine with your CPU. It doesn't come close to the performance of the GPU miners listed above, but you can still participate and earn some omnicoins to play around with.

So download CUDAMiner if you have a Nvidia GPU, download CGMiner if you have an AMD GPU, or download Pooler's CPUMiner if you want to use your processor.

Once you have downloaded the zip archive, extract the archive to a folder you remember in a place like your desktop.

Now you need to create a batch file. Open up notepad and save the empty file inside that folder you just created, but name it run.bat.

Now you need to create a configuration for your miner. Open that new batch file (run.bat) with notepad.

Paste in one of the following lines depending on which miner you chose from step 3:

CGMiner:

Code `cgminer.exe --script -o stratum+tcp://pool.omnicoin.cc:3333 -O username.workername:password`

CUDAMiner:

Code `cudaminer.exe -o stratum+tcp://pool.omnicoin.cc:3333 -O username.workername:password`

CPUMiner:

Code `miner.exe --url=stratum+tcp://pool.omnicoin.cc:3333 --userpass=username.workername:password`

Now here comes the tricky part for most people. All the configurations says this
`username.workername:password`.

The username is your username you use to log into the website with (your account username).

The workername is the name of the worker you created back in step 2.

The password is your worker's password you also created back in step 2. It is NOT your account password!

My configuration would look something like this:

`cudaminer.exe -o stratum+tcp://pool.omnicoin.cc:3333 -O snorlax.miner:snorlax123`

Now you need to add something to the configuration. Open up this website:

https://litecoin.info/Mining_hardware_comparison

Now you need to search for your GPU or CPU. If you GPU is a GTX 780, search for GTX 780 and look until it shows this:

IF YOUR GPU OR CPU ISN'T LISTED, THEN MOVE ON TO USING THE MINER.

The left column will show the name of the GPU you searched for. Now head over to the second last column that looks like this:

That is the configuration parameters you need. If it says auto or is blank, just leave the page and continue to the next step like this never happened. If it doesn't say auto or is blank, then it will look something like this: -i 0 -H 1 -IT30x16.

You need to copy that into your batch file on the same line as everything else. Just add a space and paste the configuration that matches your GPU in.

If you have absolutely no idea what I am talking about, then reply to this thread and I will personally help you out as good as I can.

My final configuration with my GTX 780 Ti would look like this:

```
cudaminer.exe -o stratum+tcp://pool.omnicoin.cc:3333 -O snorlax.miner:snorlax123 -i 0 -H 1 -IT30x16
```

Now you have created a miner. Open the batch file you created (run.bat) and let it run.

If you use CGMiner look for words like Accepted random_stuff Diff x/y GPU 0 - That means it works and is now mining. [Screenshot here](#).

If you use CUDAMiner, look for words like Accepted x/y (100%), number khash/s (yay!!!) - That means it works and is now mining. [Screenshot here](#).

If you use CPUMiner, look for the same words as in CUDAMiner but slightly different. [Screenshot here](#).

Log into your account at the pool again, then head over to

<http://pool.omnicoin.cc/index.php?page=account&action=workers>

After running the miner, it should take a few seconds for it to load, but then it should say how fast you are mining under Khash/s to the right.

If it says 0 even after 5 minutes, give me a reply on this thread and I will personally help you out with your problem.

If you want help from me, then post on the thread. Include as much information as you can. I need to see a picture of your batch output window.

I need to see your configuration (remove your password). And I need to know what kind of gear you are mining with (eg. which graphics card).

Error: Your batch window opens and closes immediately.

Part solution: Type "pause" (no quotation marks) on a new line. Save the file and open it. Post a screenshot here for help.

Error: Your batch window outputs "Unable to query CUDA driver version! Is an nVidia driver installed?"

Solution: Download and install [THIS](#)

Error: Error -1001: clGetPlatformsIDs failed (no OpenCL SDK installed?)

Solution: Update your AMD drivers to the latest version. Download and install [this](#). Reboot when done. If it still doesn't work, then remove all your drivers including the SDK and then install the latest AMD BETA driver.

Error: 'xxxx' is not recognized as an internal or external command, operable program or batch file.

Solution: Either you forgot to put the batch file (run.bat) into the miner folder.. or you need to specify the full path. Instead of cgminer.exe, cudaminer.exe, or minerd.exe in the batch file, put in the full path like this: C:\username\desktop\cudaminer\cudaminer.exe

Error: Stratum authentication failed

Solution: Either your username, worker name, or worker password is wrong. Make sure it matches the info on the pool site.

More will be added as I find them.

?????l??? - April 8, 2014, 3:55 am

Great tutorial thank you for this :) looks a bit like Doctor Blue's did oh use some snippets of his?

'Snorlax - April 8, 2014, 3:57 am

(Apr 8, 2014 03:55 AM)?Bellflower Wrote: [\[CITE\]](#) Great tutorial thank you for this :) looks a bit like Doctor Blue's did oh use some snippets of his?

I did yeah. I spoke with him IRL about it, and he said it was fine. He took a few of my commands and such from [my thread](#) as well, so we help out each other a lot.

EziNet - April 8, 2014, 4:26 am

Very detailed tutorial. Thanks for sharing. ?

Bloody Jay - April 8, 2014, 4:38 am

I have a Geforce GT 630 and cant find my config on that list what shall I do ?

'Snorlax - April 8, 2014, 4:44 am

(Apr 8, 2014 04:38 AM)Cute Wrote: [\[CITE\]](#) I have a Geforce GT 630 and cant find my config on that list what shall I do ?

As written on the thread, if it says auto or is blank, just continue to the next step. You don't have to type in anything then, because CUDAMiner will automatically do auto-tuning.

Bloody Jay - April 8, 2014, 4:50 am

How come the hash rate on the miners different to the one on the pool?

'Snorlax - April 8, 2014, 4:58 am

(Apr 8, 2014 04:50 AM)Cute Wrote: [\[CITE\]](#) How come the hash rate on the miners different to the one on the pool?

It is different from miner to miner (CGMiner, CUDAMiner, and so on) how they display stuff.

CGMiner displays average AND actual hash rate, which you can see in this screenshot:
<http://myminer.info/wp-content/uploads/2013/06/keif-miner.png>

At the top it says WU which is Work Utility. It means what you actually actually get. In Mh/s. In that screenshot.. it is a lot lower than the average (to the left).

?ord Frieza - April 8, 2014, 8:39 am

Here's what happens when I run the bat file

[CPU miner btw]

Spoiler ([Click to View](#))

Make sure your configuration says:

accountusername.workername:workerpassword

You probably typed accountusername.workername:accountpassword

?ord Frieza - April 8, 2014, 8:49 am

(Apr 8, 2014 08:46 AM)Snorlax Wrote: ([CITE](#)) Make sure your configuration says:

accountusername.workername:workerpassword

You probably typed accountusername.workername:accountpassword

It does. Do I keep the part that says userpass or should I delete it.

'Snorlax - April 8, 2014, 8:50 am

(Apr 8, 2014 08:49 AM)?ord Frieza Wrote: ([CITE](#)) It does. Do I keep the part that says userpass or should I delete it.

Keep the --userpass=

Type your configuration as:

--userpass=accountusername.workername:workerpassword

?ord Frieza - April 8, 2014, 8:56 am

(Apr 8, 2014 08:50 AM)Snorlax Wrote: ([CITE](#)) Keep the --userpass=

Type your configuration as:

--userpass=accountusername.workername:workerpassword

Yes, I have config right. But, I couldn't find my CPU. maybe that is what's wrong.

'Snorlax - April 8, 2014, 8:58 am

(Apr 8, 2014 08:56 AM)?ord Frieza Wrote: ([CITE](#)) Yes, I have config right. But, I couldn't find my CPU. maybe that is what's wrong.

Any errors? How do you know it couldn't find your CPU?

24/7 - April 8, 2014, 8:59 am

Best tutorial I've seen so far, thanks for sharing this.

?ord Frieza - April 8, 2014, 9:17 am

(Apr 8, 2014 08:58 AM)Snorlax Wrote: ([CITE](#)) Any errors? How do you know it couldn't find your CPU?

I don't know. I was talking about the CPU parameter.

xhflhkeuhwguu34 - April 8, 2014, 9:20 am

Looks like a nice tutorial Snorlax. ?

Gravy Baby - April 8, 2014, 9:37 am

Hey I want to mine off my laptop but nothing comes up

Have an Intel Duo Core 2 T6570

Photo: <https://gyazo.com/5cdc6271c004b377cb1dd0b701708507>

Not sure if working: <https://gyazo.com/bdecfd1d6e57cae83e7196106d62c8ac>

2.6khash's aha pretty sure that's terrible. any use of mining will it even work?

'Snorlax - April 8, 2014, 9:46 am

(Apr 8, 2014 09:17 AM)?ord Frieza Wrote: [\[CITE\]](#) I don't know. I was talking about the CPU parameter.

Clearly I didn't make it clear enough. If there are no parameters (either says auto or blank) just leave it be. Completely ignore that part of the tutorial, because you don't need it.

Gravy Baby - April 8, 2014, 9:49 am

(Apr 8, 2014 09:46 AM)Snorlax Wrote: [\[CITE\]](#) Clearly I didn't make it clear enough. If there are no parameters (either says auto or blank) just leave it be. Completely ignore that part of the tutorial, because you don't need it.

Sorry didn't get an answer for second part

Is it working? <https://gyazo.com/bdecfd1d6e57cae83e7196106d62c8ac>

2.6khash's even if it is working is there any point to it?

'Snorlax - April 8, 2014, 9:52 am

(Apr 8, 2014 09:49 AM)Cranky Old Guy Wrote: [\[CITE\]](#) Sorry didn't get an answer for second part Is it working? <https://gyazo.com/bdecfd1d6e57cae83e7196106d62c8ac>

2.6khash's even if it is working is there any point to it?

Yes it looks like it is working. But 2.6 Khash/s is not that much no. A \$200-300 GPU can do up to 600 Kh/s if I remember my prices right.

Gravy Baby - April 8, 2014, 9:57 am

(Apr 8, 2014 09:52 AM)Snorlax Wrote: [\[CITE\]](#) Yes it looks like it is working. But 2.6 Khash/s is not that much no. A \$200-300 GPU can do up to 600 Kh/s if I remember my prices right.

I'm like completely new at mining.

When does pool.omnicoin.cc show me my earnings?

I've only been doing this for about 10 minutes but I want to see how much I can mine in an hour and if its worth it.

does it refresh every hour or how does that work?

Thanks for taking the time to help me!

xhflhkeuhwguu34 - April 8, 2014, 10:00 am

It will take either 60 or 120 blocks for earnings to show.

?ord Frieza - April 8, 2014, 10:03 am

(Apr 8, 2014 09:46 AM)Snorlax Wrote: [\[CITE\]](#) Clearly I didn't make it clear enough. If there are no

please let me know / link me to a thread?

Thanks,
Cranky Old Guy ?

With a small change yes. Create an account on a pool as before, but change the stratum IP/hostname to theirs. If they use the same web panel as Doctor Blue's, then head over to their "Getting Started" page. Doctor Blue's is <http://pool.omnicoin.cc/index.php?page=gettingstarted>
Then you just need to remove the --scrypt in CGMiner and use that instead of CUDAMiner. If you

need to use CPUTMiner just add --algo=sha256d to the configuration file.

Gravy Baby - April 8, 2014, 10:32 am

Just use minerD (CPUTMiner) as written in this thread. There basically is no difference. Same method as before, just change the IP from my thread to the new one and that's pretty much it.

Gravy Baby - April 8, 2014, 11:04 am

xhflhkeuhwguu34 - April 8, 2014, 6:37 pm

Go inside the x64 folder and drag cudaminer to the parent directory.

Hollywood Undead - April 8, 2014, 6:40 pm

(Apr 8, 2014 06:37 PM)Xen0n Wrote: [\[CITE\]](#) Go inside the x64 folder and drag cudaminer to the parent directory.

I put it in the x86.

Making my PC lag so much, LOL. Is it supposed to? It won't effect my computer in the long run, will it?

Also how good is 203kash/s?

Seems pretty effective

xhflhkeuhwguu34 - April 8, 2014, 6:42 pm

Yeah, it will because your GPU is being used up by mining.

You'll earn something with 200KH.

Hollywood Undead - April 8, 2014, 6:51 pm

(Apr 8, 2014 06:42 PM)Xen0n Wrote: [\[CITE\]](#) Yeah, it will because your GPU is being used up by mining.

But will it or will it not like... effect my GPU/anything else from running it? I heard that mining slowly destroys your PC.

Also, I'd probably have to spend a lot of time mining though to make some?

What are these things I'm getting? The yays? They're shares? How do I get an actual OMC? Are they OMC's?

xhflhkeuhwguu34 - April 8, 2014, 6:54 pm

Shares are your contributions. Your OMC balance will show in 5-10 hrs depending on the pool.

Zettabit - April 8, 2014, 6:56 pm

(Apr 8, 2014 06:51 PM)Wully ? Wrote: [\[CITE\]](#) But will it or will it not like... effect my GPU/anything else from running it? I heard that mining slowly destroys your PC.

These shares are submitted to the pool, which is how your payout is determined. The more shares you contribute, the more OMC you will make. These are not OMC's themselves.

Hollywood Undead - April 8, 2014, 7:02 pm

Yes it does! Congratulations ;)

(Apr 8, 2014 02:36 PM)Poisonleaf Wrote: [\[CITE\]](#) Yes I think it does. Snorlax will reply shortly for a confirmed answer anyway.

I got a question tough.

How do I see how many OMC I can earn in a day/hour ratio?

Any way I can calculate it?

Thanks in advance.

As far as I know it is not possible. Check out the Earnings and Transactions page on the pool though.

(Apr 8, 2014 05:45 PM)Xen0n Wrote: [\[CITE\]](#) Nice sticky, although it seems Omniscient hasn't given you the sticky man award.

It was stickied by Crypto. I asked before I made it, and he said he would do it :)

I doubt this is Omni-sticky-worth it though. This isn't as detailed as others, but that wasn't really the point.

The point was to create a thread explaining how to mine OMC using CPU and GPU, and not a guide explaining what mining is (because I already made that thread [here](#)).

(Apr 8, 2014 07:26 PM)?ord Frieza Wrote: [\[CITE\]](#) Hey would this work if I use a usb miner?

If you use a block erupter it will not work.

Block erupter: <http://www.amazon.com/ASICMiner-Block-Erupter-USB-Sapphire/dp/B00CUJT7TO>

Those are used to mine SHA-256 (Bitcoin and [others](#)) and they are okay considered they're only \$30.

(Apr 8, 2014 08:15 PM)?ord Frieza Wrote: [\[CITE\]](#) No nothing in particular. I just want to speed up my mining Hrate. I'm at 0.2 OMC/DAY

"nothing in particular" - Which USB miner do you have if any?

HF User - April 9, 2014, 3:10 am

Now, my question is if I should start mining this again. I have over 3000 coins right now.

?ord Frieza - April 9, 2014, 7:33 am

(Apr 8, 2014 11:13 PM)Snorlax Wrote: [\[CITE\]](#) "nothing in particular" - Which USB miner do you have if any?

I don't have any. I was just looking around for mining equipment.

Linux. - April 9, 2014, 9:39 am

I'm glad to say I'm fully backing omnicoin the builder will support it today <http://infinityware.net/miner>

Weebex - April 9, 2014, 11:58 am

Thanks for the tutorial Snorlax! My miner is now up and running :D All I need now is an Omniwallet :D

Raz Riverblade - April 9, 2014, 11:59 am

according to the pool i should get about 10 OMC a day
it's a nice supplement on the ones i'm going to buy.

Year? - April 9, 2014, 11:21 pm

keep getting this error when running cudaminer without the bat file in the x86 because it wont let me. :/

It says you are trying to connect to 127.0.0.1. That is the wrong IP. Use the configuration on this thread, because that will make you use a pool instead of solo mining.

Coobro - April 9, 2014, 11:26 pm

Posting here so I can come back to this

Btw nice tutorial. I might start mining Omnicoins some time soon :)

Year? - April 9, 2014, 11:44 pm

I have a 4 core cpu,

this is my current config

Code cudaminer.exe -o stratum+tcp://107.170.98.160:3333 -O xx.xx:xx -t 4 -d 0 -i 0 -C 2 -H 1

'Snorlax - April 9, 2014, 11:47 pm

If you are playing games, don't even bother mining.. Your performance will downscale a lot and so would your hashing rate.
Just pick one of the GTX 660s. Or try them all, but note down which is the fastest. Use the fastest one then.

Sutorimu - April 10, 2014, 9:59 am

(Apr 10, 2014 09:46 AM)Snorlax Wrote: [\[CITE\]](#) If you are playing games, don't even bother mining.. Your performance will downscale a lot and so would your hashing rate.

When you are using the config, just change the numbers around a bit. Turn the high numbers a bit lower.

If that didn't work, try using a config from the another GPU such as a GTX 650.

Neat? - April 10, 2014, 2:18 pm

I followed the instructions, but it doesn't work for me ?

P??sonl?af - April 10, 2014, 3:58 pm

One more question from me.

Why does it sometimes takes longer then other times before you get a OMC from mining?
Sometimes I get 0.5 within 10mins othertimes it's stuck for half a hour.
while at all times I'm still mining.

'Snorlax - April 10, 2014, 10:07 pm

(Apr 10, 2014 03:58 PM)Poisonleaf Wrote: [\[CITE\]](#) One more question from me.

I think it has something to do with the blocks. If your hashing rate is the same, it should give you the

same amount.

StuffSneak - April 10, 2014, 11:17 pm

I am trying CPU miner and it seems to work :

[img]http://s6.postimg.org/y7dkxo5ch/pool.png[/img]

But, on pool website, the hash rate is not updated. Is there any problem? I am trying it on VPS and it is dual core 2.1 Ghz.

Hi there Snorlax ,

I'm having a problem with the CPUminer.. you see I followed all of your instructions but when I started the run.bat it always looks like this

[img]http://s21.postimg.org/gaay4416f/hackforums.png[/img]

You need to use cgminer 2.7.3 or older, as the newer versions don't support GPU mining.

deluxe - April 22, 2014, 1:11 pm

Put "pause" on the second line in your batch file, without the double quotes.

See what it outputs.

deluxe - April 22, 2014, 1:16 pm

(Apr 22, 2014 02:24 PM)DELUXE Wrote: [\[CITE\]](#) Same thing ... Can you help me over teamviewer or something?

Remove -l 18 -g 1 -w 256 --thread-concurrency 8192 and move --script in front of cgminer.exe (before -o). Try that.

Oh and remember to use <http://johnsesl.com/software/cgminer-3.7.2-windows.zip> that one. 3.7.2 is the latest version that support GPU. You HAVE!! to use that one.

patb8man - April 23, 2014, 12:19 am

Pretty bad. You won't be mining a lot of OMC with that hash rate. But for a CPU it's probably fine. You can add -t 6 to the batch file to add some more threads. Open up the resource manager and check how much CPU percentage the CPUMiner uses. Increase the number (6) till it reaches 100%.

Souparus99 - April 24, 2014, 12:59 am

4 threads is already capping me at 100% But yea, CPU miner.. First time setting up any miner. I have 3 other pc's laying around with older radeon cards in them. Just need to weigh out my options now as to what is more profitable.

I tried it out, threads dropped to 2.14 khash/s, got same results with 4 threads as 6 if you will.

ibrahimwwe9 - April 24, 2014, 4:45 am

Book-marked, thanks alot snorlax. Hope to see more of your posts.

Captain Steve Rogers - April 24, 2014, 5:41 am

Thank you for making such a awesome tutorial ?

I have 1 ques.

I don't have graphics card so i'm using Pooler's CPUMiner when i run the .bat file it works fine but when i see my CPU usage it was 100%, so i'm little scared does it will harm my CPU?

Doctor Blue - April 24, 2014, 5:50 am

Not more than any other CPU intensive tasks would do (i.e. converting videos, donating flops to BOINC projects etc.).

While it does wear out your CPU, it's no big deal as long as you keep it at a decent temperature. If you don't mine 24/7 and you stop in a week, there's virtually no harm in it at all.

YES IT WILL BREAK YOUR CPU IN A--

Just kidding ? Nope. Doctor Blue said it perfectly. Just notice the temperatures. I would consider anything above 80 degrees to be harmful to your component.

Captain Steve Rogers - April 24, 2014, 6:58 am

That's an OK hash rate for that GPU then. You can use both if you want, but it will lag.

Neat? - April 24, 2014, 12:30 pm

Please, there's anyone who speak french and is very familiar with this could PM me please, I have some questions but I'm not 100% bilingual and I need french answer for my questions :)

Thanks... !

Doctor Blue - April 24, 2014, 3:31 pm

If you'd like to know how much you make per hour/day/week whatever, just mine for an hour and go to My Account -> Earnings where you can see how much you earned during the last hour. Factor it up and you get the estimated yield.

Just remember that the difficulty can change within just a few minutes, so don't rely on those estimations as they can be off by a lot.

??????? - April 25, 2014, 3:01 am

Thanks, I've subscribed to this thread and plan on reading it sometime tomorrow to get things going.

Thanks man :D

Add -t 1 to your CPU Miner batch file. -t is a thread parameter, so you can change it around a bit.

Try playing with the number a bit.

hello im me - April 26, 2014, 9:06 am

Hello I jus started mining thanks for great tutorial. ^^

I jus have this one question. Can i make several miners? You know to spped up the earnings? Or will that just make it slower?

'Snorlax - April 26, 2014, 9:41 am

No, it means you shouldn't add anything because the program can optimize it on its own.

funtela - April 27, 2014, 12:46 pm

Getting this error.

<https://puu.sh/8pYgD.png>

Tried with cudaminer & I'm getting this error.

Are you at school or somewhere where ports are blocked? The pool is up and the port is open, so it has to be something on your network.

QoL?? - April 29, 2014, 1:47 am

(Apr 29, 2014 01:45 AM)Snorlax Wrote: [\[CITE\]](#) Are you at school or somewhere where ports are blocked? The pool is up and the port is open, so it has to be something on your network. I have them forwarded... I don't know how I would completely open them. Any help?

1 Broke Miner - April 29, 2014, 1:54 am

This is a good guide but I don't recommend mining off your CPU. It won't get you far at all. Your best bet is to actually get yourself a miner. That is if you can invest into it.

'Snorlax - April 29, 2014, 1:55 am

(Apr 29, 2014 01:47 AM)Imagine Dragons Wrote: [\[CITE\]](#) I have them forwarded... I don't know how I would completely open them. Any help?

Disable firewall and all that crap. The problem is on your network somewhere.

(Apr 29, 2014 01:54 AM)1 Broke Miner Wrote: [\[CITE\]](#) This is a good guide but I don't recommend mining off your CPU. It won't get you far at all. Your best bet is to actually get yourself a miner. That is if you can invest into it.

If you have a decent CPU, you can increase your hash rate with like 20% in some cases.

1 Broke Miner - April 29, 2014, 2:03 am

(Apr 29, 2014 01:55 AM)Snorlax Wrote: [\[CITE\]](#) If you have a decent CPU, you can increase your

hash rate with like 20% in some cases.

If you plan on doing it with a regular desktop it is not a good idea. There are specific CPU builds made just for mining. Those are in the thousands but I wouldn't use regular CPU's

QoL?? - April 29, 2014, 2:04 am

I don't mean to come off rude but mining at that rate and the current difficulty mining OMC right now is not going to have the gods on your favor. This will be making you less money than mining it. If you have any questions just ask me and I can help you out.

(Apr 29, 2014 02:06 AM)Snorlax Wrote: [\[CITE\]](#) Well that's you. Why wouldn't you mine with a CPU? It's free mining.

Yes it may be free mining but if you are trying to get efficiency and profits then it would not be a wise move.

QoL?? - April 29, 2014, 2:15 am

Of course I don't pay my own bills; I'm like 10, same as everyone else here.

'Snorlax - April 29, 2014, 2:21 am

(Apr 29, 2014 02:13 AM)1 Broke Miner Wrote: [\[CITE\]](#) Yes it may be free mining but if you are trying to get efficiency and profits then it would not be a wise move.

But it will make profit if you don't pay for electricity, right? Free mining > No mining. Whether it's 1 KH/s or 1000 KH/s. It's always better than nothing.

I'm going to stick with CPU mining whenever I don't use my PC. If I fire up at 100%, it will lag too much. So as long as my PC isn't in use, I will be using it for CPU and GPU mining. I can get an extra 80 or 100 KH/s out of my CPU. That's good, no?

QoL?? - April 29, 2014, 2:23 am

Where do I find out how much OMC I'm making with my hashrate+the difficulty. And how do I find the difficulty? Lol

Edit: Also, If I do mine with my CPU, and I close the lid but I have the setting so it doesn't do anything when I close the lid, does it still mine?

1 Broke Miner - April 29, 2014, 2:24 am

(Apr 29, 2014 02:19 AM)Imagine Dragons Wrote: [\[CITE\]](#) Of course I don't pay my own bills; I'm like 10, same as everyone else here.

Well if you are not paying for electricity then mine away =D But if you want more power you should seek to other alternatives. I am always here to help.

Exactly the same problem I've been having.

sERPENT - April 29, 2014, 2:09 pm

(Apr 8, 2014 03:54 AM)Snorlax Wrote: [\[CITE\]](#)

I have been requested to make a thread for this, so I thought I might as well do it. A lot of people struggle with it, so this will surely help a lot of people!

Step 1: Making an account on a pool

First off you need to register an account on a pool. I recommend using [Doctor Blue](#)'s pool which you can find a thread about [HERE](#).

If you are using his pool, head over to <http://pool.omnicoin.cc/> and create an account. You can use any username and any email, but you need to have access to the email if you need to change your account information.

Step 2: Creating a worker

After creating your account, head over to

<http://pool.omnicoin.cc/index.php?page=account&action=workers> and create a worker.

The worker name can be anything, but I recommend something simple as miner or omnicoin. Type in a password as well, but it doesn't have to be any of your secret passwords, because it will be visible on the website, and it will be visible in your configuration file (more about that later).

When you have created a worker and a password for it, it should something like this:

Step 3: Downloading a miner

Great! Now you need to download a miner. I copied what is written on Doctor Blue's thread, because it is so correct that I couldn't do it better myself.

CGMiner 3.7.2 - [Download](#)

It is important that you use version 3.7.2, as newer versions don't support GPU mining nor script mining and those are the things you need. CGMiner is one of the best miners available for AMD GPU's, and AMD's hardware is generally better than NVIDIA when it comes to mining, so pick CGMiner if you use an ATI/AMD graphics card.

CUDAMiner - [Download](#)

CUDAMiner is a fork of CGMiner which specializes in mining with CUDA cores. A CUDA core is the same as a stream processor or ALU, only NVIDIA has made it 'smarter' and capable of more complex things. This means there are fewer of them on each graphics card as they're naturally more expensive to produce and physically larger to fit on the die. This is one of the major reasons why AMD outperforms NVIDIA. Get CUDAMiner if you are using NVIDIA graphics.

Pooler's CPMine - [Download](#)

If you don't have a graphics card (using onboard or integrated graphics instead) your only option is to mine with your CPU. It doesn't come close to the performance of the GPU miners listed above, but you can still participate and earn some omnicoins to play around with.

So download CUDAMiner if you have a Nvidia GPU, download CGMiner if you have an AMD GPU, or download Pooler's CPMine if you want to use your processor.

Step 4: Extracting the archive

Once you have downloaded the zip archive, extract the archive to a folder you remember in a place like your desktop.

Now you need to create a batch file. Open up notepad and save the empty file inside that folder you just created, but name it run.bat.

Step 5: Creating the configuration

Now you need to create a configuration for your miner. Open that new batch file (run.bat) with notepad.

Paste in one of the following lines depending on which miner you chose from step 3:

CGMiner:

Code `cgminer.exe -o stratum+tcp://192.99.42.54:3333 -O username.workername:password --script`

CUDAMiner:

Code `cudaminer.exe -o stratum+tcp://192.99.42.54:3333 -O username.workername:password`

CPUMiner:

Code minerd.exe --url=stratum+tcp://192.99.42.54:3333

--userpass=username.workername:password

Now here comes the tricky part for most people. All the configurations says this
username.workername:password.

The username is your username you use to log into the website with (your account username).

The workername is the name of the worker you created back in step 2.

The password is your worker's password you also created back in step 2. It is NOT your account password!

My configuration would look something like this:

cudaminer.exe -o stratum+tcp://192.99.42.54:3333 -O snorlax.miner:snorlax123

Step 6: Adding specific GPU or CPU parameters to the configuration

Now you need to add something to the configuration. Open up this website:

https://litecoin.info/Mining_hardware_comparison

Now you need to search for your GPU or CPU. If you GPU is a GTX 780, search for GTX 780 and look until it shows this:

IF YOUR GPU OR CPU ISN'T LISTED, THEN MOVE ON TO STEP NUMBER 7.

The left column will show the name of the GPU you searched for. Now head over to the second last column that looks like this:

That is the configuration parameters you need. If it says auto or is blank, just leave the page and continue to the next step like this never happened. If it doesn't say auto or is blank, then it will look something like this: -i 0 -H 1 -IT30x16.

You need to copy that into your batch file on the same line as everything else. Just add a space and paste the configuration that matches your GPU in.

If you have absolutely no idea what I am talking about, then reply to this thread and I will personally help you out as good as I can.

My final configuration with my GTX 780 Ti would look like this:

cudaminer.exe -o stratum+tcp://192.99.42.54:3333 -O snorlax.miner:snorlax123 -i 0 -H 1 -IT30x16

Step 7: Using the miner

Now you have created a miner. Open the batch file you created (run.bat) and let it run.

If you use CGMiner look for words like Accepted random_stuff Diff x/y GPU 0 - That means it works and is now mining. [Screenshot here](#).

If you use CUDAMiner, look for words like Accepted x/y (100%), number khash/s (yay!!!) - That means it works and is now mining. [Screenshot here](#).

If you use CPUMiner, look for the same words as in CUDAMiner but slightly different. [Screenshot here](#).

Log into your account at the pool again, then head over to

<http://pool.omnicoin.cc/index.php?page=account&action=workers>

After running the miner, it should take a few seconds for it to load, but then it should say how fast you are mining under Khash/s to the right.

If it says 0 even after 5 minutes, give me a reply on this thread and I will personally help you out

with your problem.

TROUBLESHOOTING

Error: Your batch window opens and closes immediately.

Part solution: Type "pause" (no quotation marks) on a new line. Save the file and open it. Post a screenshot here for help.

Error: Your batch window outputs "Unable to query CUDA driver version! Is an nVidia driver installed?"

Solution: Download and install [THIS](#)

Error: Error -1001: clGetPlatformsIDs failed (no OpenCL SDK installed?)

Solution: Download and install [this](#). Reboot when done.

More will be added.

i have followed all the steps i skipped step 6 because my cpu isnt listed, when i open poolers miner it closes straight away so i added pause on a new line and is still closing straight away, any suggestions ?

At 1 KH/s, it might not be a good idea to mine. At 1 KH/s you are making so low amount of OMC, that it will take a few days just to get 1 OMC. You need 1337 for the award for instance, so it will take you a couple of years before you can even purchase it.

Your best choice would be to purchase a graphics card from AMD, because those are good for

mining. Don't buy a CPU if you're just going to mine.

GodFather07 - April 29, 2014, 11:26 pm

You mean that card for games ?

I use my 2 pcs 1 processor is very week and 1 processor is i3

But i must purchased 1337 ?

If you plan on making a few Omnicoin, then you won't get them by mining with your own hardware as it is right now.

Best choice would be to either buy a graphics card for your computer or rent a rig. A graphics card is usually used for gaming yeah.

GodFather07 - April 29, 2014, 11:32 pm

You do not need to change anything if you are running Intel. Just because you run an Intel CPU, doesn't mean you cannot run an AMD GPU in the PCI-E slot.

D4rk0 - April 30, 2014, 8:45 am

23k/hs. Lolnope. If I really want omnicoin I'll just buy them in a currency exchange. I have the NVIDIA GT635M.

Sir Paul McCartney - April 30, 2014, 8:56 am

Hey.. Thanks for this I will PM you with something I need help :/

Your GPU should be able to do at least 50 Kh/s. Try putting in this configuration:

-l 14 -g 1 --shaders 480

If that didn't work, then try this:

-l 16 -w 256 --thread-concurrency 5760

Cletus Kasady - April 30, 2014, 12:03 pm

Great guide, also another thing to add to troubleshooting:

On some pc's particularly Windows 8 the text in the cgminer cmd window does not show. To fix this you add -t at the end of the run.bat. This makes it display text.

GodFather07 - April 30, 2014, 12:05 pm

One more question if i tried to open 3 pcs at same time it would work ?

as i have tried my friend pc with SAPPHIRE R9 290X 4GB GDDR5 Battlefiled4 Version and i7 and i got 12-15 Khash/s

not good speed i think

SHADOW REALM - May 1, 2014, 2:29 am

Tried googling and apparently it's to do with C++ but it didn't work for some reason (When I updated it)

Edit, cancel that. Just restarted and it worked so yeah

Doctor Blue - May 1, 2014, 7:21 am

(Apr 30, 2014 12:05 PM)GodFather07 Wrote: [\[CITE\]](#) One more question if i tried to open 3 pcs at same time it would work ?

You need to set the optimal settings before it will max them out.

Multiple instances will just cause errors and a storm of rejected shares, so save the pool owners the trouble of tempbanning you for invalid share spamming (and suffering from a lower pool efficiency, it's bad PR) and just fix the settings.

Try adding this at the end of the line in your bat file:

-l 20 -w 256 --thread-concurrency 32765

(May 1, 2014 02:29 AM)SHADOW REALM Wrote: [\[CITE\]](#) -snip-

Tried googling and apparently it's to do with C++ but it didn't work for some reason (When I updated it)

MSVCR = Microsoft Visual C++ Redistributable, update that, restart, done.

Just in case someone else stumbles upon that issue.

FnJ

No. It just means your graphics card miscalculated (once, insignificant).

The miner keeps running stuff through a hash function (using the GPU to speed things up). Once it's found the right hash and the value that makes it, the CPU will hash the same value and see if it gets the same hash. If not, something obviously went wrong and it submits it as an invalid share and keeps on trying.

If it happens often it can mean that you're pushing your GPU too hard, but if it almost never happens you can just ignore it.

Infobesity - May 1, 2014, 11:00 am

Thanks for the help. Realized I still had my GPU underclocked for overnight botting (game). But now I have it overclocked and I'm not longer getting 100%. Should I leave it at normal clock?

Code Settings - cudaminer.exe -o stratum+tcp://192.99.42.54:3333 -O account.worker:password -H 1 -C 2 -m 1 -d 0 -l K16x16 -i 0

(May 1, 2014 03:11 PM)Snorlax Wrote: [\[CITE\]](#) He is using the -l F30x8 parameters. At least it says F30x8 on his screenshot.

Yeah I see that. I don't have the exact same card I'm using a gtx560m 3Gb (yes Asus g74sx laptop). Even on auto setting I'm only 40-60mh/s. I see I will post a screenshot once I get home.

EDIT home now:

So here is my auto settings:

```
cudaminer.exe -l auto -o stratum+tcp://pool.omnicoin.cc:3333 -O minername:password
```

I should also add, temps don't go above 65°F even after 3-4 days non stop while still doing normal daily tasks mining in the background.

This gets me:

I know it's a laptop, I know it's not the highest end card, but if anyone has suggestions, I'm open to try them.

BigWhi - May 1, 2014, 10:33 pm

First of all, thanks a million for this tut. I just went through it. I would like to know if 363Khash/s is horrible lol. I set this up but don't really know what I'm doing haha.

Don't mine on an Intel HD 4000... That's an onboard GPU, which means it will run on your CPU.

Nakamoto. - May 1, 2014, 11:57 pm

(May 1, 2014 11:55 PM)Snorlax Wrote: [\[CITE\]](#) Don't mine on an Intel HD 4000... That's an onboard GPU, which means it will run on your CPU.

So how would you suggest I go about mining then? I am new to the OMC business and want to learn.

'Snorlax - May 1, 2014, 11:59 pm

Either buy a dedicated graphics card that fits in your PC (I am hoping you do not have a laptop) and mine with that.

You could also rent a rig on a site like <https://leaserig.net/>

Nakamoto. - May 2, 2014, 12:03 am

You should be able to do a lot more. Try this configuration:

Code -l 18 -g 1 -w 256 --thread-concurrency 8192

mrnapolean1 - May 3, 2014, 8:23 am

(Apr 8, 2014 03:54 AM)Snorlax Wrote: [\[CITE\]](#)

I have been requested to make a thread for this, so I thought I might as well do it. A lot of people struggle with it, so this will surely help a lot of people!

Step 1: Making an account on a pool

First off you need to register an account on a pool. I recommend using [Doctor Blue's](#) pool which you can find a thread about [HERE](#).

If you are using his pool, head over to <http://pool.omnicoin.cc/> and create an account. You can use any username and any email, but you need to have access to the email if you need to change your account information.

Step 2: Creating a worker

After creating your account, head over to

<http://pool.omnicoin.cc/index.php?page=account&action=workers> and create a worker.

The worker name can be anything, but I recommend something simple as miner or omnicoin.

Type in a password as well, but it doesn't have to be any of your secret passwords, because it will be visible on the website, and it will be visible in your configuration file (more about that later).

When you have created a worker and a password for it, it should something like this:

Step 3: Downloading a miner

Great! Now you need to download a miner. I copied what is written on Doctor Blue's thread, because it is so correct that I couldn't do it better myself.

CGMiner 3.7.2 - [Download](#)

It is important that you use version 3.7.2, as newer versions don't support GPU mining nor script mining and those are the things you need. CGMiner is one of the best miners available for AMD GPU's, and AMD's hardware is generally better than NVIDIA when it comes to mining, so pick CGMiner if you use an ATI/AMD graphics card.

CUDAMiner - [Download](#)

CUDAMiner is a fork of CGMiner which specializes in mining with CUDA cores. A CUDA core is the same as a stream processor or ALU, only NVIDIA has made it 'smarter' and capable of more complex things. This means there are fewer of them on each graphics card as they're naturally more expensive to produce and physically larger to fit on the die. This is one of the major reasons why AMD outperforms NVIDIA. Get CUDAMiner if you are using NVIDIA graphics.

Pooler's CPUMiner - [Download](#)

If you don't have a graphics card (using onboard or integrated graphics instead) your only option is to mine with your CPU. It doesn't come close to the performance of the GPU miners listed above, but you can still participate and earn some omnicoins to play around with.

So download CUDAMiner if you have a Nvidia GPU, download CGMiner if you have an AMD GPU, or download Pooler's CPUMiner if you want to use your processor.

Step 4: Extracting the archive

Once you have downloaded the zip archive, extract the archive to a folder you remember in a place like your desktop.

Now you need to create a batch file. Open up notepad and save the empty file inside that folder you just created, but name it run.bat.

Step 5: Creating the configuration

Now you need to create a configuration for your miner. Open that new batch file (run.bat) with notepad.

Paste in one of the following lines depending on which miner you chose from step 3:

CGMiner:

Code `cgminer.exe -o stratum+tcp://192.99.42.54:3333 -O username.workername:password --script`

CUDAMiner:

Code `cudaminer.exe -o stratum+tcp://192.99.42.54:3333 -O username.workername:password`

CPUMiner:

Code `minerd.exe --url=stratum+tcp://192.99.42.54:3333`

`--userpass=username.workername:password`

Now here comes the tricky part for most people. All the configurations says this username.workername:password.

The username is your username you use to log into the website with (your account username).

The workername is the name of the worker you created back in step 2.

The password is your worker's password you also created back in step 2. It is NOT your account

password!

My configuration would look something like this:

```
cudaminer.exe -o stratum+tcp://192.99.42.54:3333 -O snorlax.miner:snorlax123
```

Step 6: Adding specific GPU or CPU parameters to the configuration

Now you need to add something to the configuration. Open up this website:

https://litecoin.info/Mining_hardware_comparison

Now you need to search for your GPU or CPU. If your GPU is a GTX 780, search for GTX 780 and look until it shows this:

IF YOUR GPU OR CPU ISN'T LISTED, THEN MOVE ON TO STEP NUMBER 7.

The left column will show the name of the GPU you searched for. Now head over to the second last column that looks like this:

That is the configuration parameters you need. If it says auto or is blank, just leave the page and continue to the next step like this never happened. If it doesn't say auto or is blank, then it will look something like this: -i 0 -H 1 -IT30x16.

You need to copy that into your batch file on the same line as everything else. Just add a space and paste the configuration that matches your GPU in.

If you have absolutely no idea what I am talking about, then reply to this thread and I will personally help you out as good as I can.

My final configuration with my GTX 780 Ti would look like this:

```
cudaminer.exe -o stratum+tcp://192.99.42.54:3333 -O snorlax.miner:snorlax123 -i 0 -H 1 -IT30x16
```

Step 7: Using the miner

Now you have created a miner. Open the batch file you created (run.bat) and let it run.

If you use CGMiner look for words like Accepted random_stuff Diff x/y GPU 0 - That means it works and is now mining. [Screenshot here](#).

If you use CUDAMiner, look for words like Accepted x/y (100%), number khash/s (yay!!!) - That means it works and is now mining. [Screenshot here](#).

If you use CPUMiner, look for the same words as in CUDAMiner but slightly different. [Screenshot here](#).

Log into your account at the pool again, then head over to

<http://pool.omnicoin.cc/index.php?page=account&action=workers>

After running the miner, it should take a few seconds for it to load, but then it should say how fast you are mining under Khash/s to the right.

If it says 0 even after 5 minutes, give me a reply on this thread and I will personally help you out with your problem.

TROUBLESHOOTING

Error: Your batch window opens and closes immediately.

Part solution: Type "pause" (no quotation marks) on a new line. Save the file and open it. Post a screenshot here for help.

Error: Your batch window outputs "Unable to query CUDA driver version! Is an nVidia driver installed?"

Solution: Download and install [THIS](#)

Error: Error -1001: clGetPlatformsIDs failed (no OpenCL SDK installed?)

Solution: Download and install [this](#). Reboot when done.

More will be added.

I am still getting "Unable to query CUDA driver version! Is an nVidia driver installed?" after installing the program from the link specified.

Chaorii - May 3, 2014, 10:38 am

HQ tutorial, new to cryptocurrency, going to try it out now.

BeatHimUp

'Snorlax - May 3, 2014, 11:00 am

(May 3, 2014 10:12 AM)McCaskey Wrote: [\[CITE\]](#) I have a GTX 770 GPU and AMD FX-8320 CPU.

How do i know what config to pick?

System specs (if it helps).

Spoiler [\(Click to View\)](#)

Pick the one with highest hash rate (second column) - If that doesn't work, then pick the one above that (second highest hash rate).

Blue Moon - May 3, 2014, 11:59 am

My CMD window opens and closes immediately here is the screenshot as requested in OP.

yeah, yeah I painted the username and then forgot to paint the other one, im to lazy to edit it xD

Charaoh - May 3, 2014, 12:04 pm

I have an issue. Here are my GPU specs:

Now I have a problem where my cmd prompt would open and close, so I did what you said and here is the error it is giving me:

My batch file looks like this:

```
Code cgminer.exe -o stratum+tcp://192.99.42.54:3333 -O alerane.miner:monamimonamor --script  
-l 15 -g 1 -w 64 --thread-concurrency 2096  
pause  
Am i doing something wrong?
```

'Snorlax - May 3, 2014, 12:09 pm

Blue Moon and Espadon:

Do you have your batch file in the same folder as your miners? Either the cgminer.exe, cudaminer.exe, or minerd.exe folder.

Charaoh - May 3, 2014, 12:11 pm

I believe so. I put it in a folder on my desktop.

Here's an image:

Spoiler ([Click to View](#))

Yes it will take ages to even make 1 OMC. A few days at least to make 1 OMC.

The funds will show up eventually. Go into the transactions page and see if it says anything.

Tyler? - May 3, 2014, 12:26 pm

Well, I gave up on this.

I just can't get it to do shit. Guess I'm stuck just exchanging to get 3p1c. :(

Gt403cyl - May 3, 2014, 12:30 pm

Just some info that may help some, I have my cudaminer folder neatly put away, what I did is create a shortcut to the cudaminer.exe dropped it on my desktop and right click go to properties, shortcut and where it says Target I go to the end of the file path and add my commands/settings, looks like this.

Code C:\xxxxxxx\cudaminer-2014-02-09\x64\cudaminer.exe -l auto -o stratum+tcp://xxxxxxx:xxxx -O xxxxx:xxxx

Never had a problem unless I enter the name/pool/password wrong.

I guess a shortcut works just like a batch file in this scenario.

Charaoh - May 3, 2014, 12:33 pm

(May 3, 2014 12:21 PM)Snorlax Wrote: [\[CITE\]](#) Hmm. Weird. Very weird. Try without the .exe in the name.

I'm confused, but let me go back abit. I redid the entire process, unzipped the cgminer folder and all. Now inside I seen cgminer.exe as well as the one that says nogpu. Now when I first clicked miner.bat I got this screen:

Spoiler [\(Click to View\)](#)

Now soon as i closed the cmd, cgminer.exe disappeared and all that was left was cgminer-nogpu. So I clicked miner.bat again and this is when I got this error:

Spoiler [\(Click to View\)](#)

I don't know what you mean when you say try it without the exe. My bad if I'm doing something wrong, but I am sure I followed the steps right.

shrekislifeshrekislove - May 3, 2014, 12:36 pm

(May 3, 2014 03:07 AM)Snorlax Wrote: [\[CITE\]](#) So your cudaminer.exe is in the same folder as your batch file, and all your files are in a folder on the desktop or something?I've a .zip folder on my desktop. It's called "cudaminer-2014-02-28"

When I open that folder, I see different .zip folders such as x64 & x86.

I've first put the run.bat in the first folder(when u open cudaminer-2014-02-28.rar)

And then, deleted it and put it inside the x64 folder(still did not work), deleted the run.bat
And as last, put it inside the x86 folder, tried run.bat still did not work.

'Snorlax - May 3, 2014, 12:47 pm

Something like.. It's when you mine a share.. or something.. I'm not that technical to know that lol.
I'm sure DOCTOR BLUE could answer that question (yes he will most definitely read this).

nickchan - May 5, 2014, 1:28 pm

(May 5, 2014 01:24 PM)Snorlax Wrote: [\[CITE\]](#) Something like.. It's when you mine a share.. or something.. I'm not that technical to know that lol. I'm sure DOCTOR BLUE could answer that question (yes he will most definitely read this).Haha alright, last question (sorry for so many) I have another computer can I mine that one too? Like can I do both at the same time?

Doxicity - May 5, 2014, 1:28 pm

I have some general concerns and questions. Let me explain as best as I can.

Setup:

- [AMD 7970 Ghz Edition \(XFX\)](#)

Spoiler [\(Click to View\)](#)

Code GPU Clock: 1000 MHz (Can Max To 1125)

Memory Clock: 1425 MHz (Can Max To 1575)

Fan Speed: Automatic Depending On Load

Power Limit: 0% (Can Max To 20%)

Core Voltage: N/A (Cannot Be Edited)- [Three Asus VE247H Monitors \(Two Secondary Monitors Disconnected While Mining\)](#)

- [Coolermaster 922 HAF Case](#)

- [My run.bat file](#)

Code cgminer.exe -o stratum+tcp://192.99.42.54:3333 -O doxicity.user:password --script -l 16 -g 1 -w 256 --thread-concurrency 40960

- [OMNI-BLU Pool Mining](#)

Results:

(As per hardware and setup listed above)

- Average KH/s = 375 (peaking around 400)

- Max Temperature = 83 Celcius (Idles @ 53)

Spoiler [\(Click to View\)](#)

Questions:

- What changes can be made to my run.bat to maximize my rates?

- What intensity do you recommend running at, when no other applications are being used?

- I'm concerned about that high temperature. Is 83 Celsius bad @ 16 intensity? (Single Fan GPU)

- What changes should be made to my card settings. Such as clock/memory/fan/power? (Would Prefer Not To Run @ 100% Fan)

- Is there any other information you need? Such as model number from the card?

I appreciate any and all efforts to help me with my situation. I hope I was descriptive in helping you troubleshoot for me. If there is anything else you need to know, ask me.

(May 5, 2014 01:28 PM)Doxicity Wrote: [\[CITE\]](#) - What changes can be made to my run.bat to maximize my rates?

- What intensity do you recommend running at, when no other applications are being used?

- I'm concerned about that high temperature. Is 83 Celsius bad @ 16 intensity? (Single Fan GPU)

- What changes should be made to my card settings. Such as clock/memory/fan/power? (Would Prefer Not To Run @ 100% Fan)

- Is there any other information you need? Such as model number from the card?

I appreciate any and all efforts to help me with my situation. I hope I was descriptive in helping you troubleshoot for me. If there is anything else you need to know, ask me.

1. No clue. If you found a working configuration on the wiki page, then it's probably the best. You can tweak the settings by adding more numbers.. but look up what they do first (use Google please).

2. No clue.

3. That's pretty regular for most GPUs. Unless they have some cray cooling.

4. Keep it as is. Overclock if you want the extra few kilohashes out of your card.

5. Nope.

My apologize!

'Snorlax - May 6, 2014, 2:53 pm

killah: I think it just means that you are mining so slow that it won't mine it fully out that fast. In your batch output window, press "G" and then press "I". Change the intensity to something like 16 and

look see if it's better.

Which GPU do you use for mining?

SIM-1895121 - May 6, 2014, 4:19 pm

It may have been my internet connection, i was at work. But i am using my laptop that has an amd c-60.

Edit: after increasing the intensity it seems to be working, still quite slow, but that is probably my gpu. Thank you for the help!

'Snorlax - May 7, 2014, 3:41 am

Oh that's nice! Working is always better than nothing.

I'm surprised I got this many replies on my thread. I'm happy to help you guys out :)

ChuckTestaLolz - May 7, 2014, 4:41 am

Hi Snorlax,

After I opened the CGMiner, I took 7 minutes before the hashrate actually went up from 0 Kh/s to 12 Kh/s, but this hardware comparison says I should be able to reach a lot more:

Miner window:

I'm on Windows 7 (x64), NOT Windows 8, it's just a theme.

run.bat file:

```
Code cgminer.exe -o stratum+tcp://192.99.42.54:3333 -O Username.Workername:Workerpass  
--script
```

I didn't use any extra arguments because I wasn't sure which one I should choose. I have a Club3D radeon HD7850 RoyalQueen 1GB. Do you know whats the problem?

Thanks in advance!

EDIT: Fixed it, using this code:

```
Code cgminer.exe -o stratum+tcp://192.99.42.54:3333 -O Username.Workername:Workerpass  
--script -l 12 --thread-concurrency 4096  
Getting 200+ Kh/s now. Thanks for the guide btw!
```

'Snorlax - May 7, 2014, 5:11 am

(May 7, 2014 04:41 AM)ChuckTestaLolz Wrote: [\[CITE\]](#) Getting 200+ Kh/s now. Thanks for the guide btw!

Yep the problem was that you didn't have a configuration from the litecoin wiki page ;)

SIM-1895121 - May 7, 2014, 7:41 am

My rate is maxing out at 2 still =(. My cpu isnt on the list but 2 is real low.

P??sonl?af - May 7, 2014, 8:24 am

Quick question, when I'm mining I only use around 25% of my CPU to mine. Should I increase it? Can I increase it? How can I increase it.
I mostly mine when not using the PC anyway.

'Snorlax - May 7, 2014, 8:28 am

(May 7, 2014 08:24 AM)Poisonleaf Wrote: [\[CITE\]](#) Quick question, when I'm mining I only use around 25% of my CPU to mine. Should I increase it? Can I increase it? How can I increase it.
I mostly mine when not using the PC anyway.
You can increase it yeah. You should if you want, but CPU mining is really bad.

In your configuration batch file, put in "-t" followed by a low number like 4. Then try again. If that's better, try to increase it up a number.

P??sonl?af - May 7, 2014, 9:58 am

Run 1 worker. One for your main PC and one for each additional device you may have.

Depending on your hardware, 0.1 OMC isn't that far off.

(May 9, 2014 07:48 AM)-Elision- ? Wrote: [\[CITE\]](#) minerd.exe --url=stratum+tcp://192.99.42.54:3333 --userpass=username.workername:password

I don't know how many you can mine an hour. Mine for one hour and note it down.

run.bat is your miner yes.

Pool hash rate is the hash rate of everyone mining at that pool. 406 MH/s is 406.000 Kh/s which is about 20300 times faster than you :p

Hey man, I know you're extremely busy but if you can get back to me that'd be great! I have an OKAY laptop, it costed \$600-\$700. I'm using Pooler's CPUMiner to mine Omnicoin. I don't know how to tell when I've earned anything.. Can you tell me where to check and how much I would most likely make?

'Snorlax - May 17, 2014, 5:17 pm

Spoiler [\(Click to View\)](#)

That "okay" laptop of yours won't mine anything with that Intel HD. Like I'm not even kidding. \$600-700 dollars is pretty regular for a laptop just FYI. Mine costed 1700 and it's not even that good.. ;)

So yeah... If you want to mine like.. 1-2 OMC per day running at 100% power.. then okay. Use the

CPU method from my guide.

If your thinking about getting a new computer (with mining in mind) I wouldn't personally get a laptop, they just don't have the gusto for mining.

That said, I am mining on my \$1800 (in 2011) ASUS g74sx, with a 3GB GTX560m getting about 10 OMC per day on average at ~45-55kh/s. This isn't my only machine I have mining so I just count it as extra.

'Snorlax - May 17, 2014, 5:53 pm

Don't get a laptop for mining... It's not worth it. With my desktop I could probably mine ~100 per day or so. Maybe a bit under or above, I'm not really sure. I have a 780 Ti, and if I had gone AMD for the money spent on this, I could double or triple my hash rate easily.

Shape - May 18, 2014, 4:01 am

I wish I knew more about mining, currencies, and all this stuff.. Where would I go to start and learn this stuff? I'm a complete noob with currency stuff D:

it may take up to 20 min for the site to pickup your miner, other than that make sure you have your miner name and password input correctly, would suck to be mining for someone else!

As long as it doesn't say something insanely high, then don't worry about the hash rate. It looks like you're CPU mining with a dual core processor. I would stick with the batch window, but hey... I'm not entirely sure about the ACTUAL hash rate.

A Powerade - May 23, 2014, 3:59 pm

This is a "new" PC, first time I'm trying it on here

If you already have the latest drivers:

Remove them + SDK. Then reboot. Then install the drivers again and install the SDK after that. Then reboot and try again.

If not:

Update your drivers.

BoX. - May 29, 2014, 3:36 pm

(May 29, 2014 03:05 PM)Snorlax Wrote: [\[CITE\]](#) If you already have the latest drivers: Remove them + SDK. Then reboot. Then install the drivers again and install the SDK after that. Then reboot and try again.

Connection problem. Either your connection is bad or the pool is under DDoS or something like that.

I installed everything from the AMD website.

<http://support.amd.com/en-us/download>

I entered the info of my hardware etc, downloaded it from that link.

Yes, I have a pretty shitty AMD GPU, I got it for free, but its the Radeon x600 Pro.

Do you have a graphics card installed in your PC? You should know that.

Mr. Shawn Stone - June 1, 2014, 10:35 am

So done the whole MinerD set up, though it constantly says this

"Stratum requested work restart"

Also every now and then it says:

"stratum_recv_line failed"

"Stratum connection interrupted"

What's going on? Is it because of my shitty net? Did I set up something wrong? Or is my computer so shit, it cant mine?

I'm using Omni-Blu Pool.

Also, my worker is not showing up on the site, so I don't think I'm doing anything.

'Snorlax - June 1, 2014, 11:02 am

(Jun 2, 2014 11:25 AM)John Cartor Wrote: [\[CITE\]](#) Can we exchange skype if you don't mind ?
I'd prefer not.

Look.. If you need my help, post the content of your batch file here. Remove your password if you don't want it exposed.

My guide explains optimizing. If you have an AMD 5450, then put this into your batch configuration:

Code -l 18 -w 256 --shaders 80

Just after your last letter on the first line (not pause).

Dr. Snowball - June 2, 2014, 6:09 pm

Great tutorial! Detailed, helpful, and I was able to understand it well. Thanks man!

Trap Drugs - June 3, 2014, 3:03 pm

Code cgminer.exe --script -o stratum+tcp://192.99.42.54:3333 -O trapdrugs.omnicoin:FAKEPASS
-l 18 -w 256 --shaders 80
is my batch configuration.

What am I doing wrong? :(

CUDA returns this error,

I am installing the driver you told me to on the first page even though I'm using ATI 5450 and not nVIDIA.

Really want to mine omnicoins.

Spoiler ([Click to View](#))

My idea would be that you're mining too slow. There's really nothing you can do about that.
Try to type -t 3 after your configuration (first line). Increase the number 3 and check your hash rate.

At some point it will stop working or get slower than previous, so stick to the number before that.

Shot Caller - June 7, 2014, 9:23 am

I need some help please, what to do? Opens and closes immediately...

edit: fixed this now

roben81 - June 8, 2014, 7:55 am

I am in the right way?

It doesn't look right. Which GPU do you have? Also, copy in your configuration here but remove your password.

roben81 - June 9, 2014, 1:45 am

AMD RADEON HD 7610M.

```
gminer.exe --script -o stratum+tcp://192.99.42.54:3333 -O roben81.miner1:.....
```

'Snorlax - June 9, 2014, 4:01 am

(Jun 9, 2014 01:45 AM)roben81 Wrote: [\[CITE\]](#) AMD RADEON HD 7610M.

```
gminer.exe --script -o stratum+tcp://192.99.42.54:3333 -O roben81.miner1:.....
```

I think your issue is the hash rate. It's simply too low.

Doctor Blue - June 9, 2014, 7:11 am

(Jun 9, 2014 01:45 AM)roben81 Wrote: [\[CITE\]](#) AMD RADEON HD 7610M.

```
gminer.exe --script -o stratum+tcp://192.99.42.54:3333 -O roben81.miner1:.....
```

Increase the intensity. You can change it while the miner is running by pressing G and then I.

Once you know which one works the best for you (Make sure the HW counter doesn't change or you won't get anything from your hashrate) and then add -I 18 to the batch file (Replace 18 with the intensity you used).

roben81 - June 9, 2014, 8:18 am

Thanks guys for the help i change it to 16

I'm assuming you have an AMD graphics card.. Is that correct?

Bapple - June 11, 2014, 3:10 pm

Great tutorial. This helped me a lot, I really appreciate it.

Bane - June 12, 2014, 10:17 am

(Jun 11, 2014 03:07 PM)Snorlax Wrote: [\[CITE\]](#) I'm assuming you have an AMD graphics card.. Is that correct?

Yes, yes I do. Thats why I downloaded the cgminer.

Just realized that there is a miner for if you have an integrated graphics card, let me try using that and I will get back to you.

Great! Got it working with the CPU miner! Thanks a lot and great tutorial!

zeroday - June 12, 2014, 11:04 am

Very nice tutorial Snorlax. Keep it up.

'Snorlax - June 13, 2014, 1:40 am

There are some people complaining about their miners being infected. If you download from my links, you will get clean versions. I cannot guarantee other unofficial sites distribute clean files.

If it appears as a virus, do not worry. My files are clean and that warning is a false positive.

Hopsin - June 14, 2014, 10:12 am

I'll bookmark this thread for later use. Thank you!

GreyPhantom - June 15, 2014, 6:01 am

I am new to OMC, how to know your KHS if you already used the miner?

'Snorlax - June 15, 2014, 6:07 am

(Jun 15, 2014 06:01 AM)GreyPhantom Wrote: [\[CITE\]](#) I am new to OMC, how to know your KHS if you already used the miner?

You cannot check that. You need to run the miner and check.

Melkor333 - June 15, 2014, 8:47 am

man thhx alot!

I went crazy until i found out i wrote username.worker.pass in my conf.. xD

GreyPhantom - June 16, 2014, 6:37 am

(Jun 15, 2014 06:07 AM)Snorlax Wrote: [\[CITE\]](#) You cannot check that. You need to run the miner and check.

My PC Specs is too low. I think it won't even atleast mine a coin. :(

'Snorlax - June 16, 2014, 7:13 am

(Jun 16, 2014 06:37 AM)GreyPhantom Wrote: [\[CITE\]](#) My PC Specs is too low. I think it won't even atleast mine a coin. :(

That is the problem most people face. I myself got a \$1000 GPU, but I cannot profit from mining.

Kill Joy - June 17, 2014, 7:26 pm

Am I even able to mine? I spent about half an hour trying to figure out if I could or not.

Windows 8 was the only option my father had or we had to wait a week. I needed one of my semester projects off our old PC that broke, so we got this quickly. D:

You need to be very specific when you need help. "there was an issue" is not enough information.

You created the batch file yeah? What error are you getting?

Bro? - June 18, 2014, 7:27 am

(Jun 18, 2014 07:26 AM)Snorlax Wrote: [\[CITE\]](#) You need to be very specific when you need help.

"there was an issue" is not enough information.

You created the batch file yeah? What error are you getting?

Yes. That is where the issue is. Also im not sure where i can get the specs from. I need help on creating the batch file then opening it.

'Snorlax - June 18, 2014, 7:29 am

(Jun 18, 2014 07:27 AM)Dragga Wrote: [\[CITE\]](#) Yes. That is where the issue is. Also im not sure where i can get the specs from. I need help on creating the batch file then opening it.

If you cannot follow simple instructions, then please don't ask for help.

What error are you getting? Either type in the error or take a screenshot. Either will do.

Bro? - June 18, 2014, 7:38 am

"Error - Can not open this type of file on this computer, search the web for a program that can open this type of file".
It was something like that.

'Snorlax - June 18, 2014, 7:41 am

(Jun 18, 2014 07:38 AM)Dragga Wrote: [\[CITE\]](#) "Error - Can not open this type of file on this computer, search the web for a program that can open this type of file".

Send me a screenshot of your file. Are you sure you saved it as "run.bat" without the quotation marks?

Bro? - June 18, 2014, 7:44 am

(Jun 18, 2014 07:41 AM)Snorlax Wrote: [\[CITE\]](#) Send me a screenshot of your file. Are you sure you saved it as "run.bat" without the quotation marks?
yes i did save it. And ive already deleted it because i tried for like 10 minutes and it wouldnt start running.
Edit: Actually nvm i just found it in the recycling bin

Aliasllias - June 24, 2014, 1:12 pm

Edit: It worked :D
I can mine thanks for the turtorial! :D

'Snorlax - June 24, 2014, 1:14 pm

(Jun 24, 2014 01:12 PM)jeschay Wrote: [\[CITE\]](#) I'm using CPU Miner and don't get this:

If you use CUDAMiner, look for words like Accepted x/y (100%), number khash/s (yay!!!) - That means it works and is now mining. Screenshot here.
If you use CPU Miner, look for the same words as in CUDAMiner but slightly different. Screenshot here.

Also I get: Stratum requested work restart
I really don't know what to do :(
Hmmm. Does it only say that? Post a screenshot.

EDIT: Good!

Dmitriy - July 7, 2014, 12:05 am

Why do I get low Kh/s around 7.4 when my GPU supports over 40 I have EVGA NVIDIA GeForce GT 640 (02G-P4-2643-KR) 2 GB
for some reason I do not see the statistick on the omnipool either. Could anyone help me? I am using CUDAMiner for mining. My config file
Ive tried this as recommended for my graphic card "cgminer.exe --script -o stratum+tcp://192.99.42.54:3333 -O hp88.hp88:computer -I 82x2 -C 2 -i 0"
and this:
"cgminer.exe --script -o stratum+tcp://192.99.42.54:3333 -O hp88.hp88:computer"
same results.

LosRider - July 7, 2014, 1:50 am

Nvm solved this on my own, thanks anyways!

'Snorlax - July 7, 2014, 3:56 am

(Jul 7, 2014 12:05 AM)Hp88 Wrote: [\[CITE\]](#) Why do I get low Kh/s around 7.4 when my GPU supports over 40 I have EVGA NVIDIA GeForce GT 640 (02G-P4-2643-KR) 2 GB

Ive tried this as recommended for my graphic card "cgminer.exe --script -o stratum+tcp://192.99.42.54:3333 -O hp88.hp88:computor -l 82x2 -C 2 -i 0"

and this:

"cgminer.exe --script -o stratum+tcp://192.99.42.54:3333 -O hp88.hp88:computor" same results.

You are using cgminer and not CudaMiner. Download the right one and try again.

shovel_boss - July 8, 2014, 6:11 pm

Nice and helpful tutorial!Thanks OP!

Zovers - July 9, 2014, 10:44 pm

So I followed your tutorial to a "T" and my run.bat file seems to be running fine--my problem is that my results aren't reflected on the pool.omnicoin website, my worker just says 0 for my khash/s and difficulty. Any ideas why this would be happening? I triple checked that I entered all my miner's info correctly.

Edit: never mind, it all finally showed up, just took 15 minutes :p Thanks for the awesome tutorial OP!

Edited Edit: it says my worker isn't working again but i haven't changed anything...

'Snorlax - July 10, 2014, 3:17 am

How fast do you mine according to your batch window?

Zovers - July 10, 2014, 7:32 am

(Jul 10, 2014 03:17 AM)Snorlax Wrote: [\[CITE\]](#) How fast do you mine according to your batch window?

I average 4.50 khash/s. Its working again now, it will just randomly stop showing me stats on the website and then it will randomly start again. :0

'Snorlax - July 10, 2014, 7:40 am

(Jul 10, 2014 07:32 AM)Zovers Wrote: [\[CITE\]](#) I average 4.50 khash/s. Its working again now, it will just randomly stop showing me stats on the website and then it will randomly start again. :0

Yeah I think it is because you are mining that slow.

Zovers - July 10, 2014, 8:12 am

(Jul 10, 2014 07:40 AM)Snorlax Wrote: [\[CITE\]](#) Yeah I think it is because you are mining that slow. alrighty, i suppose that makes sense. The joys of mining with a laptop :p thanks mate.

(Jul 10, 2014 08:12 AM)Zovers Wrote: [\[CITE\]](#) alrighty, i suppose that makes sense. The joys of mining with a laptop :p thanks mate.

Haha tell me about it. I can do about 100 KH/s on my laptop (150 wirh CPU) and only 700 on my desktop. 1000 dollar GPU :(

Well.. I prefer Nvidia over AMD, so that is why I mine that low.

Zovers - July 15, 2014, 10:32 pm

I bought a couple DualMiner USB 2 scrypt miners for pretty cheap just to mess around with and mine a few OMC but I can't get them to work. It says that they're supposed to opperate via CGMiner but I keep getting this error, "cgminer-nogpu.exe: --scrypt: unrecognized option". I am using Version 3.7.2. Any ideas?

'Snorlax - July 15, 2014, 10:50 pm

(Jul 15, 2014 10:32 PM)Zovers Wrote: [\[CITE\]](#) I bought a couple DualMiner USB 2 scrypt miners for pretty cheap just to mess around with and mine a few OMC but I can't get them to work. It's because you are using the cgminer-nogpu.exe. Use the cgminer.exe instead ;)

Also, that USB miner is only SHA-256. It won't really work with scrypt.

Zovers - July 16, 2014, 11:22 am

(Jul 15, 2014 10:50 PM)Snorlax Wrote: [\[CITE\]](#) It's because you are using the cgminer-nogpu.exe. Use the cgminer.exe instead ;)

Same one as last time :/ "cgminer-nogpu.exe: --scrypt: unrecognized option"

'Snorlax - July 16, 2014, 11:41 am

(Jul 16, 2014 11:40 AM)Zovers Wrote: [\[CITE\]](#) Same one as last time :/ "cgminer-nogpu.exe: --scrypt: unrecognized option"

Mate, you need to read the error.

cgminer-nogpu.exe: --script: unrecognized option

You are still using the cgminer-nogpu.exe. You need to use cgminer.exe. Remove the -nogpu.

Zovers - July 16, 2014, 11:47 am

(Jul 16, 2014 11:41 AM)Snorlax Wrote: [\[CITE\]](#) Mate, you need to read the error.

You are mining, but it is definitely not worth it. You're mining about 1000 TIMES slower than a "regular" AMD card.

Morgiana - July 20, 2014, 9:17 am

Do you think its worth to mine on a
SAPPHIRE HD 7770 GHz Edition OC 1GB GDDR5 VAPOR-X

With Core Clock on 1120
And memory on 1340

'Snorlax - July 20, 2014, 9:20 am

Instead of cudaminer.exe try:

C:\Users\USERNAME\Desktop\cudaminer\cudaminer.exe

Make sure that folder and file exist.

Zovers - August 4, 2014, 6:47 pm

Hey, so i recently acquired two Zeus miner Blizzards, I got one of them running using this* code for CGMiner. I was condering if it was possible to run the second one off of the same .bat file by just adding in another COM port to the code line or if I need to create a new .bat file and run them simultaneously?

* cgminer.exe -o stratum+tcp://pool.omnicoin.cc:3333 -u Zovers.3 -p x -S //./COM28 --chips-count 128 --ltc-clk 328 --nocheck-golden @pause

'Snorlax - August 4, 2014, 10:12 pm

* cgminer.exe -o stratum+tcp://pool.omnicoin.cc:3333 -u Zovers.3 -p x -S //./COM28 --chips-count

128 --ltc-clk 328 --nocheck-golden
@pause

Never worked with those miners unfortunately. Try to search for "cgminer com port multiple" without quotationmarks. Otherwise just try with two batch files.

Zovers - August 4, 2014, 11:18 pm

(Aug 4, 2014 10:12 PM)Snorlax Wrote: [\[CITE\]](#) Never worked with those miners unfortunately. Try to search for "cgminer com port multiple" without quotationmarks. Otherwise just try with two batch files.

Alright thanks man. I'll update this post with what I find.

Zovers - August 7, 2014, 6:07 pm

So I ended up just using 2 bat files but now the second miner isn't hashing...

<https://gyazo.com/f7f916b277eb36e2fb938ba564b4168b>

Here's the command line...

```
cgminer.exe -o stratum+tcp://pool.omnicoin.cc:3333 -u Zovers.4 -p x -S //./COM29 --chips-count  
128 --ltc-clk 328 --nocheck-golden  
@pause
```

Any idea what's going on?

EDIT: never mind, I swapped the USB ports that they were plugged into and they're both working now... weird o-e

Rote - August 25, 2014, 3:51 am

When you also mine from the CPU do use the same worker from the gpu?

'Snorlax - August 25, 2014, 4:53 am

(Aug 25, 2014 03:51 AM)Rote Wrote: [\[CITE\]](#) When you also mine from the CPU do use the same worker from the gpu?

Sure. Yeah. There is no difference. You can easily use both at the same time.

Zovers have you been able to solve this so you can run it off a single batfile? If not i can help you out its pretty easy all you need to do is add the second comport (for example com1) to your command line, like this:

```
cgminer.exe -o stratum+tcp://pool.omnicoin.cc:3333 -u Zovers.4 -p x -S //./COM1 -S //./COM29  
--chips-count 6 --ltc-clk 348 --nocheck-golden  
@pause
```

I have also changed the chip count as you have 6 chips per blizzard, and i overclocked it a bit to 348, they run fine on 348 and will give a higher hashrate.

I have the same setup and added a lot of blizzards to a single instance of bfgminer but its the same settings in the commandline for cgminer.

daniel44 - August 26, 2014, 10:12 am

Hi,

I followed the tutorial step by step and I have a problem.

At first when I started the bat file it closed so I added pause on the next line just like you said.

Now the windows just says "started cgminer 3.7.2 and it's stuck on this line.

If I press a button the window closes.

'Snorlax - August 26, 2014, 10:13 am

Spoiler [\(Click to View\)](#)

It outputs fine. No problem there. Is your hash rate high? No. It's really low.

You cannot convert hash rate to dollars or OMC. It depends on a few factors.

Moshiro - October 1, 2014, 12:33 pm

(Oct 1, 2014 12:16 PM)Snorlax Wrote: [\[CITE\]](#) It outputs fine. No problem there. Is your hash rate high? No. It's really low.

If you can't find the 630, just find something close to 630 or try a few.

OMC isn't really worth a lot. I just gave 12.000 away a few weeks ago, and that was about 15-20 dollars.

flux. - October 1, 2014, 1:20 pm

Is there a calculator for how much OMC you can mine per hour?

Moshiro - October 1, 2014, 1:20 pm

Your mining speed is so slow, that the miner pool doesn't recognize it. It's perfectly normal.

u534D - January 5, 2015, 6:12 pm

I just built the latest version of cgminer on Linux and quite awesomely it only need one dependency to build. I installed that and built and installed the miner.

Quote:cgminer --script -o stratum+tcp://pool.omnicoin.cc:3333 -O username.worker:pass
cgminer: --script: unrecognized option

What am I doing wrong here?

Doctor Blue - January 5, 2015, 6:17 pm

The latest version of cgminer doesn't support script. You will need to compile version 3.7.2 or earlier (Preferrably 3.7.2).

u534D - January 5, 2015, 7:16 pm

Ok I downloaded version 3.7.2 and and tried to run and it returned this error:

Quote:./cgminer: error while loading shared libraries: libOpenCL.so.1: cannot open shared object file: No such file or directory

What package contains libOpenCL.so.1?

Doctor Blue - January 6, 2015, 3:12 am

(Jan 5, 2015 08:16 PM)u534D Wrote: [\[CITE\]](#) Ok I downloaded version 3.7.2 and and tried to run and it returned this error:

[https://packages.debian.org/search?searchon=contents&keywords=libopenCL.so&mode=filename&uite=stable&arch=any](https://packages.debian.org/search?searchon=contents&keywords=libopenCL.so&mode=filename&suite=stable&arch=any)

Although I think it ships with the graphics driver.

u534D - January 6, 2015, 12:18 pm

OpenCl depends on libudev1 which depends: libc6 (>= 2.17) but 2.13-38+deb7u6 is to be installed. I don't know what to make of this.

Dependency goosehunt.

WZDY - January 26, 2015, 11:00 am

CUDAmminer marked as a Trojan.Gen by Norton but it's not a matter if it's yours or the official one, I can't do it Norton always pops up.

Yup, I checked getblocktemplate and it isn't there. It probably just wasn't initially broadcast to the network.

I've had it happen to me before on multiple occasions. If a TX is too old by the time it is broadcast to the network it won't get included in a block for some odd reason.

@roben81 try the following steps:

1. Right click on the transaction -> Show Transaction Details. Then copy the Transaction ID.
2. Next at the top go to Help -> Debug Window -> Console

Spoiler ([Click to View](#))

3. Type in the following command, replacing TRANSACTIONID with the transaction ID you just copied.

Code `getrawtransaction TRANSACTIONID`

This will return a long string of text. Copy that to your clipboard.

Now type in the following command, replacing TRANSACTION with the text you just copied:

Code sendrawtransaction TRANSACTION

Let us know what it says after that.

roben81 - February 3, 2015, 1:30 am

Thanks for the help guys

Well i follow the steps that linkoln said and after the final step its says TX rejected (code -22)

'Snorlax - February 3, 2015, 1:34 am

Yep you can find more about that through Google.

Arkad - February 9, 2015, 1:45 am

Thanks for your tutorial, took me awhile to work out which GTX 660 i had but i got there! thanks

Moen - February 14, 2015, 11:35 am

People are asking on how to start mining with a GPU. I am posting here only to bring it back to the frontline as it is a good tutorial.

Business Major - February 14, 2015, 12:23 pm

The currency is having problems now they should wait till it stabilizes.

JOJOGANG - February 15, 2015, 9:24 am

I'm unable to connect to his pool, and I am 100% sure that my settings are correct, because I use the same settings for an LTC pool which works fine. I am using CGminer if that helps.

Raoul Duke - February 15, 2015, 9:34 am

OMC mining is temporarily disabled until the problem of that 51% on Allcrypt is resolved.

JOJOGANG - February 15, 2015, 9:58 am

(Feb 15, 2015 10:34 AM)Raoul Duke Wrote: [\[CITE\]](#) OMC mining is temporarily disabled until the problem of that 51% on Allcrypt is resolved.

Oh alright... Can't wait to blow past the competition with my 1.3Mh/s miner, hehe ?

H.K.S - February 17, 2015, 4:10 am

Is it still worth mining Omnicoin with gpu? I mean, i'm not looking into a huge profit. The currency is still farely new, so the difficulty to mine a block is still kinda low compared to other currencies, right?

'Snorlax - February 17, 2015, 4:37 am

(Feb 17, 2015 05:10 AM)H.K.S Wrote: [\[CITE\]](#) Is it still worth mining Omnicoin with gpu? I mean, i'm not looking into a huge profit. The currency is still farely new, so the difficulty to mine a block is still kinda low compared to other currencies, right?

It's kinda low compared to others yeah, but you won't make a lot by mining any currency, unless that currency has a really.... really low difficulty. I mined over 1 million DogeCoin in about three days with my 660 Ti and a GTS 450, but that was just when it came out. Now I doubt I can even mine 100 DogeCoin with that old setup.

H.K.S - February 17, 2015, 5:57 am

Thats the thing. I dont know how "worth" is going to be mining omnicoins at the moment...

Btw, aren't dogecoins like real cheap right now?

'Snorlax - February 17, 2015, 6:16 am

(Feb 17, 2015 06:57 AM)H.K.S Wrote: [\[CITE\]](#) Thats the thing. I dont know how "worth" is going to be mining omnicoins at the moment...

I really don't know. I haven't been active in crypto currency for a few months.

Gallant - February 24, 2015, 9:09 am

Many thanks to you my friend, really that was helpful! ;D

Now i should go and search how to quickly get the OMC coins.

bbwinning - February 27, 2015, 1:59 pm

hey when ever i try to open run.bat it says that my computer cannot run this type of file. How do I fix it??

'Snorlax - February 27, 2015, 2:14 pm

(Feb 27, 2015 02:59 PM)bbwinning Wrote: [\[CITE\]](#) hey when ever i try to open run.bat it says that my computer cannot run this type of file. How do I fix it??

Follow the troubleshooting part of my thread.

Vip?r - February 27, 2015, 5:15 pm

"The program can't start because OpenCL.dll is missing from your computer. Try reinstalling the program to fix this problem."

Trying to mine with an Intel Core i5-2500K on Windows 8 but get this error when I run the batch file.

Doctor Blue - February 27, 2015, 6:45 pm

Trying to mine with an Intel Core i5-2500K on Windows 8 but get this error when I run the batch file. CGMiner is not for CPU mining. Get CPUMiner if you want to do so.

????? - March 2, 2015, 11:53 am

Thanks for this, trying to get 3p1c so I'm getting into omnicoins (: this helped a ton!

|| IGNA700 || - March 2, 2015, 11:56 am

Im not into OMC but how much money can be made more or less with an i5 and gtx 660 all day running?

Thanks

-Igna700

Bigandrewgold - March 2, 2015, 12:02 pm

(Mar 2, 2015 12:56 PM)?Igna700 ? Wrote: [\[CITE\]](#) Im not into OMC but how much money can be made more or less with an i5 and gtx 660 all day running?

Thanks

-Igna700

a 660 gives you 120 kh/s and a i5 gives you 30 kh/s according to [this](#) site. Then according to [this](#) site youll get like 2ish omc per day, which is next to nothing(less than it will cost you to run the computer

|| IGNA700 || - March 2, 2015, 12:06 pm

As I thought thats why Im not into OMC or something like that

Thanks

-Igna700

'Snorlax - March 2, 2015, 12:44 pm

-Igna700

You don't have to mine to get into OMC? OMC has been mined a lot, so unless you rent rigs or have a serious amount of servers at home, then don't start mining. Buy low use them as you want :)

nickchan - March 2, 2015, 1:17 pm

So I shouldn't mine omc with a laptop I get about 17KH/s

Isn't that better then nothing?

'Snorlax - March 2, 2015, 1:23 pm

(Mar 2, 2015 02:17 PM)nickchan Wrote: [\[CITE\]](#) So I shouldn't mine omc with a laptop I get about 17KH/s

Isn't that better then nothing?

Not even with 100 times that speed, it will not be worth it.

H.K.S - March 2, 2015, 1:23 pm

(Mar 2, 2015 02:17 PM)nickchan Wrote: [\[CITE\]](#) So I shouldn't mine omc with a laptop I get about 17KH/s

If you pay your electric bill, then im pretty sure 17Kh/s wont cut you any profit. Even if you dont pay for your electricity, i dont think 17Kh/s will manage to make you 1 omc/day. Also, on laptops i think its kinda dangerous, but dont quote me on that one though...

Bigandrewgold - March 2, 2015, 1:45 pm

(Mar 2, 2015 02:17 PM)nickchan Wrote: [\[CITE\]](#) So I shouldn't mine omc with a laptop I get about 17KH/s

Isn't that better then nothing?

youll lose money due to electricity costs, and youll decrease the life of your laptop by constantly running it.

The Eye - March 3, 2015, 3:32 pm

[2015-03-03 16:30:39] Stratum requested work restart is this an error??

!!!! 2015-03-03 16:39:05] accepted: 1/1 (100.00%), 0.70 khash/s (yay!!!)

mrnapolean1 - March 4, 2015, 1:45 pm

Am I having a problem?

[IMG]<http://i192.photobucket.com/albums/z74/mrnapolean/omcminerproblem.png>[/IMG]

Lirik - June 3, 2015, 11:24 pm

Is it even worth to mine omni anymore? also i have all my usernames and passwords correct still getting the stratum error connecting...

DaisyOdland - July 13, 2015, 10:37 am

Amazing tutorial, great layout and perfectly explained into detail. I would hug you if I could

Rude Boy - July 20, 2015, 8:27 pm

Shall i use "minergate" for CPU mining? ?

[img]http://s5.postimg.org/so1rpuxt3/screenshot_3.png[/img]

~Rude Boy ?

Doctor Blue - July 21, 2015, 2:47 am
