Thread: [Hide "From" in text message?](#)

Drizzy?? - April 11, 2014, 9:47 pm

Hi I'm using gmail to send an email to my phone. (SMS Bomber).

Problem is, when I view the message on my phone, it shows something along the lines of:

FRM: *MyGmailHere
SUBJ: My subject
MSG: My message

Now, I'm wondering if there's a way to get rid of:

FRM: *MyGmailHere
SUBJ: My subject
MSG:

Is there a way to make it ONLY show my message?

If not, is there a way to at least hide my gmail?

Still need this. I'd greatly appreciate it if somebody could help.

Are you using any APIs to send the message? If you are using an API then there offs nothing to so, but if you can get your hands on the message before it gets sent, then you can easily remove the text with RegEx.

I'm just using my gmail to send it to mynumber@txt.att.net

Well that is not possible then. That text is sent from the server.
