Vouch for my boy Furroh. He knows his shit, and will make sure to help you out and provide you with the best products.

Vexane - April 11, 2014, 10:47 pm

I'm going to go ahead and vouch for this product as I have helped make this thread possible. I'll be taking any and all questions, no vouch copies will be given.

Glad to work with you Furroh!

Fox™ - April 11, 2014, 10:47 pm

Vouch for Furroh. Legit product. I've used it, and it works.

IPs are really easy to acquire, don't worry about not having any IPs. I can help you through it if you need help.

Keep in mind this is one of the first SSH Bruters to have a GUI (that's actually decent) We're also providing the cheapest!

Thanks for the vouches guys. Multithreading update is coming out today! As well as I am adding HWID protection. Auto update should be out soon, and we are working on the AutoIT script for the IPs.

Vexane - April 12, 2014, 10:53 am

For anyone wondering what the AutoIT script does, is it filters IPs from nmap that are usable.
This will make your SSH brutinng hundreds of thousands of times more efficient.

We'll be sure to add this in a future update.

This update is massive!

There'll be a setup video soon!

We have multiple additions to the product that'll make your life 10x easier!

The IP Filter will take your nMap logs and get the working IP addresses (make sure you use the 'Get SSH IP.bat')

And the Password List is simple but effective.

To anyone looking for an SSH Bruter for \$10 that's easy to use, and extremely efficient, you better buy ours!

Vexane - April 13, 2014, 6:13 pm

Pushing another update today!

We've got some great stuff for you guys!

We've fixed multi-threading so now you don't need to be constricted by what your computer tells you that you can use.

We've added a feature that controls threads so if you want you can just up it to 30 (max) threads and there will be no crash.

EvanLB7 - April 13, 2014, 6:47 pm

Sorry guys. We have to take it back to single thread for tonight. I have some serious IRL issues going on right now and I can't push the update to fix the multi IP bug. But single thread should be okay for tonight. Update will be pushed in approximately 20 minutes, close your clients and open them to receive it! Sorry for having to do that. Hopefully I can get it back to multi threading tomorrow!

Mike Bars - April 13, 2014, 6:55 pm

Yes, the update is pushing soon, we still don't have an ETA besides sometime within the next 2 days, but it'll fix most of the problems you guys are facing (NetSeal gives us an overview of what errors you guys are facing)

Satanism, if you could PM me with more detail on the error you're receiving (I'm currently debugging) I could help fix it in the next update.

For everyone having issues with the AutoIT tools (the IP Filter specifically) PM me and I'll update your files (all of them).

We can't currently update via NetSeal as we are experiencing some issues, but like I said, feel free to request the updated .zip file.

Yes, this is planned for the next update; after 1x1x1x1 finishes his threading issues, I'll start making an autosave feature for every crack.

EvanLB7 - April 16, 2014, 4:50 am

The updates should be out today! This will be way more optimized than just the multithreading we talked about! Few new awesome features to come! Buy now or pay more later. Price goes up soon as the update drops!

??1x1x1x1 - April 16, 2014, 4:55 am

I should be able to release my part of the update by tonight!

Not right now, but it's in progress (all we need is to figure out how to send the update over NetSeal).

Please hold off on the video until we get some more things stabilized.

Gathering IPs is your first task, so that might take about 10ish minutes (good thing it's automated :))

Make sure you use a good username too, sometimes "root" isn't always the best.

Ours is more for testing purposes.

Make sure you are on v1.2.0.0. Also, as Varosion said above. Our password list is not that HQ as they are mostly common passwords of an average person.

Our bruter comes with tools that'll make collecting IPs as well as scanning them 100 times more efficient.

The fact is, ours is better and it can be proven with just a short list of features:IP Scanner (as well as filter so you can get around 1000 IPs per 10 minutes)

We have multi-threading

Ours can brute multiple IPs rather than just one

Ours is well worth the \$15 and I can guarantee satisfaction!

EvanLB7 - April 22, 2014, 2:20 pm

Well, I tried to resolve the chargebacks. Sucks people are sick enough to buy with a stolen Paypal. Buy link has been added back.

Hagler - April 25, 2014, 9:57 am

1. You should add "\r\n" to end of line (Cracked account).
2. Some IPs were regconize as OK but it's not OK. => Try this with your program : 119.237.231.61
3. Try to remove IP if it was cracked before.
