Thread: [Minecraft Premium Checker](#)

ImBanana - April 12, 2014, 1:48 pm

Hey! I am pretty new here, but i will give it a try and share something i made with you!

Of course i know, it is easy to do and not the best work! but as newbie, i hope you gonna like it! of course there are also many of these in the web!
but be patient with me :D

Just want to share with you!

Checked it out, for first time its nice but u def need to start using asynch routines.
You use a while loop for all those names, thats screaming for UI freeze and the website might not awnser quick enough for the UI que to process.

So start google for "asynchronized" routines in vb.net

-B

WhyWork - April 12, 2014, 2:24 pm

Code Using wc As New Net.WebClient

```
Dim resp As String = wc.DownloadString("http://www.minecraft.net/haspaid.jsp?user=" &
Username)
If resp.ToLower().Contains("true") Then
    'premium account
Else
    'output response
End If
End Using
```

    'premium account
Else
    'output response
End If
End Using
```

resp is never anything but lowercase, why would you bother with the extra method?

@OP: Refer to TheBarret's post to improve this immensely. WebClients have asynchronous support to help with the UI issues this likely experiences.

ImBanana - April 13, 2014, 7:29 am

thanks! i am trying to learn this async stuff, and implement it soon!
