Thread: [Simple Dork Scanner + SQLi Vulnerable Scanner](#)

Giommi - April 13, 2014, 6:38 am

Hi there
a little release

yes no threading... but as i said a simple release u can add what u want
the dorkscanner uses the google search api

its a pretty unfinished release... it works but u can upgrade it :D

if u import the dorks they must be splitted by a new line! (or change it :D)

there is a contextmenu on the two listboxes :D just rightclick!

Hope u enjoy the release :D

Are you expecting other users to scan it for you or what?

DilarangMasuk - April 13, 2014, 8:24 am

I think if we used google search api there are limits, am I right or not?

Yes, there are.

Also, I believe we have to provide some sort of verification to obtain the official API and using it for something malicious like this is never recommended.

Mine is not as Advanced than yours
i also didn't use threads so the app is freezed while loading

yes i made a Super Simple Dorkscanner :D

DrKill69 - April 14, 2014, 6:52 am

NICE ! :D thank you very much sir ! :)

This just searches for sites that has extensions

E.g;

<http://Site.com/Extension/>

And not anything like;

<http://Site.com/Extension.php?ID=1>

This isn't searching dorks
