Thread: [Keylogger USB Autorun?](#)

OMGNEEDSLEEP - April 14, 2014, 9:36 am

Hi

I've been googleing around, but I cant seem to find what im looking for.

What I want is a keylogger that runs automatically from a USB when you insert it into a computer, so i dont want any silly pop-up screen, because that would totally fuck up the whole thing.

It would be so helpful if someone could help me out with this!

Thanks!

I am also looking for something similar to this.

Will keep my eye on this thread.

Do not use autorun it's not the 90s any more and autorun is disabled on vista and up!

Thanks for the reply.

Could you suggest anything, an alternative maybe?

My librarian at school has network admin.

I can get local admin easily but network would be nice :)

The back of her computer (usb slots) is easily accessible and she leaves at all hours of the day.

Any suggestions?
