Thread: [Sketchy Malwarebytes Anti-Malware Update](#)

Narrate - April 14, 2014, 10:05 am

Hello HF,

So, first of I wanna say I am sorry if this is in the wrong section. I wanted to post in the Malware removal section but I don't even know if I am infected or not as this could be a legit update.

So, I just ran Malwarebytes pro, to do my daily check up, than there was a message that came up that said something like, you're using a outdated version of malwarebytes pro, so I clicked yes for the update. Now it uninstalled Malwarebytes, and reinstalled a new one. This honestly looks pretty weird and it all seems pretty sketchy. I would appreciate some re-insurance as this does seem like a rogue.

Lol, your ok that's the new 2.0 version, it's legit. Go to Malwraebytes website and you will see.

Thank you.

OP please close this thread. You misinterpreted Mbam's newest 2.0 update, you are safe and it does look sketchy, but has new functions and I like it.
