compile it to a dll, then add it to your project and you can use it just like if it was C#.

Or if you have some little knowledge of VB.NET then you can convert it for yourself, or just use a online converter.

Looks a bit too square-ish imo. but, a lot nicer than many other things I've seen.

Hawk HF - February 9, 2015, 5:14 am

I'm the creator of Bonfire theme.

Just thought I'd throw that out there.
