Thread: [\[Tutorial\] iPhone secret number tutorial \[pictures included\]](#)

skyplateau - April 18, 2014, 3:45 pm

If you are on this forum and have an iPhone you have probably heard of this before. However some will not have, so I am going to share it today. I do not claim to have discovered this.

Basically all you do is go to the phone app and dial the numbe

'*3001#12345#'

Spoiler [\(Click to View\)](#)

Once you do this a window titled 'field test will appear. This lets you see hidden settings, although this has no use.

Spoiler [\(Click to View\)](#)

It also allows you to change the signal bars to a numerical form this appears automatically as field test opens.

to keep this permanent simply tap on the top left while still in field test to change it back to the bars. Then do a force restart by holding the sleep and home button at the same time until the apple logo shows up. When it has rebooted your signal bars will be in numerical form.

Spoiler [\(Click to View\)](#)

I hope this tutorial was useful. -skyplateau

RelationShit - April 18, 2014, 3:51 pm

Woah, thanks for the permanent solution. Works, thanks again lol.

Thanks!

Thanks, i appreciate the reply :)

there are plenty of other secret numbers but this is the best one.

iDuL - April 18, 2014, 5:03 pm

A client who I serve at my job came in showing me this. He's really tech savvy, so I thought this was really interesting.

thanks for the share! I'll do it for my phone when I get it on Wednesday.

skyplateau - April 18, 2014, 5:37 pm

No problem.

EDIT: have updated OP with pictures!

Truth - April 18, 2014, 8:23 pm

lol so this is what apple got.. and it aint even got a use lolol

I never claimed it was useful. It's just a cool little Easter egg xD

Dean Winchester? - April 19, 2014, 1:49 am

Lol I just checked it out, not useful for doing anything really.

Thanks for the share though I've never seen this before :D

aguila - April 19, 2014, 1:53 am

Nice share,Gonna try this in a bit also I never saw this so it seems kinda cool

Sorry, my bad. Did not see that, it is from quite a while ago.

you can't really complain about it though when there are all those duplicate darkComet setup tuts.

RelationShit - April 19, 2014, 3:35 pm

So..

Anyone any idea how I can remove it after the permanent thing?

Rebooting etc doesn't work lel

Edit:

This worked:

- 1.To shut off the numbers and put the signal bar back on, open the field test app from the phone again.
- 2.Tap the signal numbers at the top left and exit the app.

maxmiskelly - April 20, 2014, 10:03 am

Thanks this is really helpful and I didn't know you could do this so thank you man!!

carlos_matos - April 20, 2014, 10:17 am

That's cool. Might try it out soon.

haha glad to help :)

Restrict - April 20, 2014, 7:36 pm

how did you guys not know about this? It is like the most common shit.
You can find it if you search iPhone hacks.
