Ladies and gentlemen.

Hold on to your trousers, t-shirt and grandmother. (little joke..)

Today I want to share with you guys a very big hack pack, which has 181.9 MB. My partner sent me this package so I dont know who made it.

If you are the guy who made this package, contact me and I will remove this topic.

Alright mates, now to the hack package.

The hack package has two Parts:

The first one is a:

Booter, ddoser, Flooder, Dos Package.

The second part is a:

Crack tool, IP tool, Shells, HTTP tool, Port scanner, Toolbox Package.

ATTENTION:

I just share this package with the same files as I got it, I didn't made any hacking tools in this package and I didn't edited anything. So be sure that you open the tools in your VM or in sandboxie because I dont know if they are all secure.

Download Link:

80% of the tools are working fine.

Contact me if the link is down and be sure to post your feedback about this package.

Enjoy and take care.

Greetings from germany and I am sorry for my bad grammer.

Bye.
