Thread: [Got my JTAG/RGH Tools and Started my RGH](#)

Tyler777 - April 21, 2014, 8:19 pm

Well i got my NandX FINALLY after like waiting forever on the mail! Well I started to solder it onto my board to pull my nand and flash my DGX Well I ran into an issue on the final wire the solder will not stay on the board it just comes off ? Its really irritating btw its the nandX Ground wire. (Yellow)

Just solder it to the AV/HDMI port like you do the coolrunner.. That's what I always do.

Reading the nand only has to do with the Black, Brown, Orange, Red, Blue and Green wires. I've done this 100s of times.

You can read the nand without even soldering it to the board at all. But it's safer to just solder it to the AV/HDMI port. (Yellow Wire)

No ground is ground. It has nothing to do with the nand dump, its just a simple ground. You can solder it to any ground on the board. I Just solder it to the hdd port, just on the metal. That point is always a pain so i gave up trying lol.

Doctah - April 21, 2014, 8:49 pm

If it's not sticking then your point is not clean. Apply flux after cleaning it with a qtip and rubbing alcohol.

Well this is all new to me lol I was trying to follow it exactly as it says. but its good to know i can solder it to something else!!!

I have not Modded an xbox since you could just buy some wire and require it to jtag it ?
