Thread: [regex how to fix this regex code to get matching domain links ?](#)

polas6 - April 22, 2014, 9:15 am

I need to fix this regex code and i do not know what is wrong with it it is not mine code.

what it does so it can scrape links from google and put all domain urls with something.com.

What i want that this code would work correctly so just scrape correct domain name links.

But now this code does like random links not as i type keyword to get links from the textbox and put all matching links into listbox but not random.

Here is the code:

PHP Code

```
<?php  
http(s?):\/\/([w-]+\.)+[w-]+
```

How to fix it ?

TheBarret - April 22, 2014, 11:07 am

Code ((?:http|https)(?:\V{2}[w]+)(?:[V\|.]?)(?:[^\s"]*))
- B

polas6 - April 23, 2014, 2:31 am

the code works but it gives me like this and this is what i do not like it and do not want :(

[http://www.hourb.com/&sa=U&ei=DlhXU-XLDKjC7AalkIDgDQ&ved=0CDwQFjAB&p:usg=AFQjCNH5Ux9SKMjxFQ80x0U_jTKDJEkfyA](http://www.hourb.com/&sa=U&ei=DlhXU-XLDKjC7AalkIDgDQ&ved=0CDwQFjAB&usg=AFQjCNH5Ux9SKMjxFQ80x0U_jTKDJEkfyA)

how to do like that ?

<http://www.hourb.com>

Thanks again.

Volim te - April 23, 2014, 2:35 am

Code (https?:\/\/[-a-zA-Z?-??-?()0-9@:%_+.\~#?&//=]+)
Try that I hate regex so much!

polas6 - April 23, 2014, 2:41 am

[img]http://i55.fastpic.ru/big/2014/0423/f3/4e2cb724fc9c7c89aa689a3b25d374f3.png[/img]

It give the same results and one before ;(

This is awesome to use regex only if you use new thread ;)

It does job very fast this program can scrape 1000 links and no ban from google :)

But only using thread works.

TheBarret - April 23, 2014, 3:34 am

Com'n goddamned are u that stupid and lazy? modify the damn regex we fucking spoon fed you every pattern for any domain, and still your begging for more spoon feeding.

im done with you.

polas6 - April 23, 2014, 4:05 am

That's where is the problem why i'm asking you to help to solve the problem cuz i do not know regex coding just to know one thing how to use them.

and i'm not stupid or lazy ;)

xNjQ8x - April 24, 2014, 11:24 pm

convert links to URI and take the domain

```
Code MsgBox( ToURI("http://site.com/?longtext").host )
Function ToURI(ByVal link As String) As Uri
    Return New Uri(link)
End Function
```

polas6 - April 25, 2014, 4:04 am

I want to use it in listbox not with msgbox ?

I wanna list all found domains in listbox cuz i use only listbox as you see in the picture ;)

Code MsgBox(ToURI("http://site.com/?longtext").Host)
is the short version of

```
Code Dim something As String
something = ToURI("http://site.com/?longtext").Host
MsgBox(something)
I hope you understands this and can use it ?
```
