Vouch for this crypter, Banksy is a excellent coder and you will be getting nothing but quality with this product.

GLWS Banksy.

TheCrazy8th - April 28, 2014, 6:33 am

Vouch for Banksy, legit coder, always has quality products.

Also, helped me get rid of my cancer, quick and easy. ?

frontenhack - April 28, 2014, 8:33 am

BIG vouch for banksy, his crypter is awesome, and works perfectly with my products :)

DragonHunter - April 28, 2014, 9:18 am

Vouch for my buddy blanket, such crypter, very wow, much cheap, many vouches :D

GUCCI - April 28, 2014, 9:23 am

Some one can basicly just buy the Chronic crypter for \$10 and then buy 12months of Arcane Protector for an other \$10 so he would save \$5!

damn im smart c; GLWS!

1.) I am unsure of Chronic is still able to be purchased

2.) If you want to Jew someone out of \$5 that badly then go for it.

3.) One could easily see that the same person who bought Chronic, assuming it is still up for sale at this point, and then an hour later also purchased this new one.

So no, I wouldn't try that.

I bought the crypter 2 days ago, and I must say he is doing what he must do.
Crypting my malware FUD.
The crypter works with many native and .NET applications. (Selftested)
Banksy is a nice guy who responds immediately when you report him an error.
Very good protector for little money.
Keep it up!

GanDino - May 4, 2014, 6:21 am

Please reset my license, I installed my whole Windows system twice and I always get this. Even without AV installed and defender and firewall off.
There must be something wrong with Net Seals.

So there is no solution? I mean it does not recognize my license file.

I never had this before and if so, how comes that it is blocked for me ?

I am also willing to buy another copy, because I am sure it has something to do with my reinstall of Windows.

I just wanna use this software as advertised, and it does not work.

It worked 2 days, and I decided to reinstall because the binder did not work. I told you also about it.

If there is no solution, what do you suggest me to do?

Thanks in advance.

When I was on teamviewer you had Comodo installed. If that is still installed, try uninstalling it.

If it's not, then make sure Windows Defender isn't messing with anything.

If all else fails, you might be able to try a VM or something.

Send me a PM to go on teamviewer if you need any help.

Ahh I saw this thread right after I purchased another Crypter. I was a Chronic customer, wish I had chosen you again!

Big vouch for Banksy, his coding is great work.

Robert Nesta Marley - May 18, 2014, 6:11 pm

More than happy to purchase as a former Chronic user but is there any chance you can add an unlimited file binder in this crypter? The Chronic binder worked pretty well if I remember correctly.

I believe it does.

Sorry about the scanner issues everyone, should be working now.

Zakom13009 - May 21, 2014, 4:45 pm

Good crypter , fud and stable with DarkComet and Plasma HTTP and good Options.

SIM-1809171 - May 23, 2014, 10:39 am

Working with Plasma Rat?

Drop me a PM with the reply please?

Martinm90 - May 24, 2014, 3:15 am

Just purchased this :D Looking good thanks

JarmenKell - May 24, 2014, 4:35 am

Does this work in VMware (win7 setup) ? Does Netseal accept VMware ? And how much KB wil the

server be with your crypt ?

That's not a valid reason. I mean if your PC has prblms you cannot post on HF anymore? Come on,

in times with smartphones, tablets and more you always can post something like: I'm having issues with my PC, please be patient.

If everything fails you can go to an internet cafe to post it.

If you have a running business you have to take care about it and inform your customers what's going on.

A valid reason is of course a health issue. In that case I hope the best for Banksy and that he will be back soon.

Even us (his friend in a group chat) haven't heard from him since fews. It must be pretty serious PC/internet problems or something else.

I'm back. Sorry about the downtime and not being on for a while. I moved and I haven't had time to get situated with the computer and as Benz said, I haven't even been on Skype.

Don't worry though, no health problems - I'm not dead. Quite the opposite, I'm feeling better than I have in a while.

It will take me a day or so to get the server up and running and to get an update out. Sorry about all of this, it won't happen again. I'll make sure it doesn't.

To anyone that wants extra time added to their license, just send me a PM and I'll sort you out.

youngwitty - July 18, 2014, 3:46 pm

I purchased this crypter currently 5/39 detection rate. I really like the layout, super easy step by step process, just a little to high of a detection rate for my liking thus far. I hope theres an update soon because it was very user friendly from the layout and the price was right!

I'm really sorry for all of this. My computer died and my car died at pretty much the same time. Because I was short on money, there was really nothing I could do. I'll make it up to everyone, somehow. I will add time to everyone's accounts. Besides that though, I will have something special that I will give to all customers as soon as I am finished with it. I am not asking to be forgiven, this is something I should have been prepared for. I will do all I can to make up for it. Expect an update in a few hours.

Debug makes it so the output runs in a console. It's mainly for development purposes and doesn't have much use for users.

Yeah, if the rates keep up, once my current crypter expires, I'll most likely purchase this.

Batidas - August 10, 2014, 2:26 pm

Just buy it today and tested right now. WORKS excellent and almost FUD!!!! thanks!!!!

you have a skype where I can contact you?

just tested this and my AVG still detects it. Any idea how to fix?

Khamul - August 11, 2014, 2:37 am

Might consider purchasing today if it is still FUD, what are the usual FUD times of this crypter?

EDIT:
Ok i guess

I just bought the crypter and I made several tests on some proactives. This one does not seem to bypass avast deepscreen with success... and it is supposedly undetected by avast.

Try not to bind any file, Avast detection will disappear. If you need to bind

just use your RAT for it. should work fine.(does in my case)

an output/crypted file must be FUD under any of the crypter settings. Otherwise, it has not been fully reFUDed.

Im not arguing that it needs a re-FUD but the 'zusy' detections are generic....try changing icon and assembly.....Its 2/39 for me :)

A cool crypter which one is never updated isn't a cool crypter. There are detections since weeks and the owner is not responding nor updating this software. I have tried via PM and he did not respond. Last time his excuse was his PC or his car, or both of them were broken. But as I said before: Not to inform your customers is a sin. You always can log in to HF from anywhere and inform your customers about what's going on.

I asked Banksy for a refund because this crypter will not work anyway and he answered his apologize to me (way time back). So I thought maybe he will take care more about his crypter now, but unfortunately he is not taking care at all.

When Banksy had his older project running I was satisfied with it and that was the reason why I bought this product, that was a fault.

He has changed his business and every day with a detected crypter is a breach of contract where he has to compensate the customers. That will not make any sense because he needs to add you 5 years of his crypter to have 1 year a FUD working crypter.

I don't know how you guys call it (we are all from different countries and cultures) in my country we call that a SCAM

[IMG]<http://scan.majyx.net/image.php?id=201813>[/IMG]

eCoLoGy - October 3, 2014, 10:27 am

I agree with you GanDino.

He should care much more for his customers and update the crypter much more often.

I just stated, when the crypter is working fine it's a good crypter.
