Isn't OMC like \$1: 20 -15?
You're killing the coin, anyways GLWS mate.
Seems like a nice vault!

Chickendipper - May 4, 2014, 8:28 am

Huge vouch for Enronitis. The project was originally mine, and he bought it off me.
The video was by my friend Naamhier, who has been credited appropriately. You can be sure that your files are safe with him!

OMC is at a bit of a range, prices are subject to change over-time these are just initial ones. :)

Thank you for the vouch! <3
Hopefully I can take this project far!

Sounds like someone discovered Blackarmor's 100 exploits.

elmedoc - May 4, 2014, 9:33 am

Good luck with sales ;)
Good to see this project ;)

SoldierX - May 4, 2014, 9:47 am

Good luck with sales mate, ?
I hope you enjoy the sales.

Where are the servers based? Does this also give .exe links?

Servers are based in Kansas mate;

This doesn't assign urls to any files uploaded. This is strictly a storage system allowing for upload/download of any of your given files.

?

If you're looking for filesharing you may want to check out [http://anonfiles\[WARNING POSSIBLY INFECTED\].pw/index.php](http://anonfiles[WARNING POSSIBLY INFECTED].pw/index.php)

You can upload files up to 100MB in size and share them. It's completely anonymous and no logs are stored.

Vouch for Enronitis.

He knows what he's doing.

Oh shut up. The price for Crypto-Currencies is decided on what users decide.

Right now according to Omni's prices the coin is near 1:26 because ep1c has a cost of 12 USD at the moment which on coinpayments can be bought for 318 OMC at the time of posting. Soon when ep1c is no longer 12 USD but 10, the coin prices will go to 1:30 for the award (or near that). At the moment from OP's prices he is doing 1:30 prices.

Anyone can choose what prices they want to charge and if buyers decide to pay that price, shame/good for them.

Thank you!

Got quite a few registrations already, hopefully everyone enjoys the service. ?

Nobody can spy on your traffic because you don't use SSL, right?

Fixed.

SSL is now being used.

Give me a second.

.htaccess just got fucked. SSL is working just fine, it's the site that's not working right now.

EDIT:

Everything should be working fine now.

Enronitis - May 5, 2014, 5:07 pm

About 30 registered users right now

I'm looking to expand this to encompass more features and options

I'd love any feedback/suggestions/etc

You can PM me, or post it here <3

Got a lot coming in terms of this project.

In the process of having a drop-box like application developed as well as some other things.

Going to try and take this to the big leagues!
