Cryptic™ - May 4, 2014, 2:59 pm

I have just created <http://omc-rates.com/>

I present to you, the Preev of OmniCoin.

It grabs the OMC --> BTC exchange rate from AllCrypt.

Then it takes the BTC --> USD Rate from BTC-E.com by default as that is the most popular exchange, but you can also select what ever you want.

Enjoy.

Updates:

April 3 2015 - <https://hackforums.net/showthread.php?tid=4760167>

-- Public api added and much more, details can be found in the thread.

The rates update on the server every ten minutes. As that is how often AllCrypt allows you to grab rates.

Perhaps instead of just two decimal places, you should include more.

If 100 OMC = 0.00882157 BTC = \$3.845, then

1 OMC should = 0.0000882157 BTC = \$.03845, not \$.04.

See now that would make more sense. If you estimate from the start you are bound to have problems towards the end.

The server grabs the data from AllCrypt once every 10 minutes. Right now in the system it's assuming 1 OMC = 0.00008800

The site displays exactly what it last grabbed.

AllCrypt only allows fetching rates once every 10 mins.

The last time it grabbed the rates 1 OMC = 0.000088

So all the calculations are correct.

$0.00008800 * 100 \text{ OMC} = 0.0088 \text{ BTC}$

$0.0088 \text{ BTC} = \$3.77 \text{ USD @ BTC-E rates.}$

Since the price for 1 OMC = 0.000088, it should be equal to \$0.03835, not \$.04.

If 100 OMC 0.0088 BTC (\$3.76), then 1 OMC should be 1/100th that price, or aprox. 0.0376 BTC.

I'm either being stupid or...

EDIT; Maybe I am just wrong.

It's a math issue regarding decimal places. Since dollars only use 2 decimals places after the zero you multiple 100 OMC in US * 1% and you'll end up with a difference compared to one. Simple problem with digits.

~HF~ - May 4, 2014, 3:59 pm

It's not like you're actually going to see an exchange difference by seeing 7 decimals past the 0 in US dollars because they don't round up like that. However if you do this: $100 \text{ OMC} = 0.0088 * 0.01 = 0.000088 \text{ BTC}$ therefore giving you 4 cents. Done. Solved. Don't reply.

No dis but take 5 minutes and design it better.

1. Get rid of border.
2. Increase font sizes.
3. Increase submit form box sizes.

Doxicity - May 5, 2014, 10:09 am

I think it's been suggested, but just incase it hasn't.

Rather than making it so you can only place an input in the OMC box, how about all 3?
So rather then "hit and missing" with OMC to find \$100 worth, I can just put 100.00 into the USD box.

It's exactly the same as what ever you will get on AllCrypt, as I grab the OMC --> BTC rates from there.

Then I use BTC-E's rates for the BTC-->USD conversion.

If you calculate it all manually you will get the exact same figures.

New site design should be out later today, or at the latest tomorrow.

I am also adding an option so you can choose which exchange you want to base your BTC Rates off of, such as Coinbase.

If you do (or don't) perhaps on the site you should say where you're getting the conversion rates from.

This is awesome.

Going to start coding the new features tonight. Should be released tomorrow

SlyFox - May 7, 2014, 7:01 pm

Just a quick suggestion.

You should make it so whichever currency box you clicked inside will be the Tab's name so you don't have to open the Tab every time you wanna see the rates.

For example:

The Tab says "OMC Rates" right now, it would be cool if it was like "OMC Rates - x.xx\$".

Sorry if this has already been suggested.

Did you read the OP.

You are entering \$50 USD on the site, and it uses BTC-E's rates to convert it to BTC

There's nothing wrong at all. What the site says is exactly what your getting.

I entered \$50 USD and follow the arrows. Site is 100% correct.

When a user puts a comma in a field, convert it to a period. We danes, for example, have a comma on the numpad instead of a dot and I'm really acommodated to using that key :P

Dankrupt - May 18, 2014, 1:28 pm

May I suggest adding a couple decimal places to the USD price? Often the price drops to 1 cent per coin, when in reality it should be 1 point something. I get quite a few people coming to my exchange thread and saying my prices are way off, even though I'm still between 1-2 per. Often even right after they say that, the price s back up to 2 cents.

How about the two other exchanges? Maybe you could just use bitstamp as default instead?

Alternatively you can cheat them into giving you more decimal places.

Multiply the bitcoin/omnicoin amount by 1000 and divide the USD amount by 1000, then you get 1.64 cents per omnicoin.
