Xepher The Cat - May 6, 2014, 1:53 pm

Is this unmetered bandwidth? And spoof enabled?

Host FR [™] - May 6, 2014, 1:56 pm

IP Spoofing enabled to the ISP & Bandwidth unmetered (only spoof plans), just read :)

MrCortex - May 6, 2014, 3:28 pm

A little question because maybe I'm interested in your service but I has one big question.

Is there also a possibility to install a custom OS image?, I have made a custom Linux build for a product I want to launch here in my country but before I want to build some big dedicate servers the

software need to be tested.

There should be no problem normally to install all the software one by one but in my case it is the setup images that needs to be tested.

Let me know if there are some possibilities so I can test it on a online environment, if you want to check the images before installation is fine but only if I can trust you that there will nothing leaked and all that you can guarantee this.

Host FR [™] - May 6, 2014, 3:38 pm

i will see with my purveyor PM me for more infos sir

Disfigure - May 6, 2014, 3:53 pm

These are some pretty solid servers thanks a bunch
