Thread: [From a Beginner to a Beginner. We get goin!](#)

xxJokker - May 7, 2014, 11:02 pm

This is a discussion about theory stuff what could only work in our mind. So PLEASE don't try to make your dreams come true.

Good morning dear ladies and gentlemen,

I'm a beginner in the dark art. Instead of asking how to do it without bringing any own ideas or motivation, I've come up with the idea (which is by omission not a new idea) beginner helping beginner. For sure if a pro wants to invest his time teaching us, I'm the last one who'd say no.

I'm having a closer look at DarkComet and Imminent Monitor 3. My plan is mining. All day and all night. But I also think before I'm able to mine I should have a plan. So Correct me if I'm wrong but the only way to be profitable with mining is to have a bunchass of slaves (500 upwards). So step one would be efficient spreading.

Step a: Theory efficient spreading:

Theory a: I thought on getting some neat lady pic collection. Starting a fb account as that neat lady. Adding everybody who could be interested. Waiting for acceptance. then sending some jpg's in a zip with a .com-file what actually the rat is.

Theory b: a very known method but let's try it. I don't know the outcome if it is efficient or not. But it has potential.

the youtube method. cause my goal is mining I need some good slaves with big rigs. So let's assume we know how to write a hack for a game. example WoW and post this to youtube. If the crack is working or not is not the matter it just needs to look like it worked. After this we link it to our uploaded rat/bot/w.e

to get viewer we spam other wow channels and twitch and so on with the youtube link.

Theory c: like vitamine c. if you have some money and want to try this method which has the highest potential to fail then go for it. buy some pendrives like 50 or more (If you find a seller for a dollar each then it would be cool thing) then add your rat in each of them. Go make a tour with a bus and let one stick there. visit a university and place some there. Be creative.

Theory d: this is a method assuming you have an email list with a bunchass people in it. also assuming you know how to google or already know fake mails. By now some people already know whats coming. ;)

more ideas? come on and share with us. cause sharing is learning!

Step b: To be continued.

Questions for the end:

1: My ISP is blocking port forwarding and stuff like this. As silly as it sounds, would it still be possible to RAT? Because the NET is not working since some days, I'm not able to reproduce it right now but it's THE question what bugs me at most in the last couple of days.

2: To pro's if a good friend of yours would start with stuff we are discussing what advise would you give him at all?

3: To other beginner's: You got any tips or hints you wanna share about spreading or any other topic you are interested in?

Thanks for reading and happy sharing!

Reminder: This is just a discussion not a thread to motivate anybody to act or do something. So I'm not the one who is responsible what anybody here is saying or doing!

Lord_Doge - May 8, 2014, 12:07 am

I'm pretty sure the port forward blocking issue would be solved by a VPN.

Another method is binding your RAT to a popular song then uploading it to YouTube with a download link in the description.

P4r4docs - May 8, 2014, 12:45 am

I'm totally down to help you buddy. I have a similar plan, and am literally deciding the same factors. I say we partner up, I know a decent amount about hacking in general.

And yes, go with a VPN like 143VPN. They offer port forwarding, and have a LIFETIME subscription on sale right now for only \$25! (I use them myself)

With that, you'd have no problem RATing, but the best bots are HTTP.

My Skype and email are darknet676@gmail.com

Get at me.

xxJokker - May 8, 2014, 3:47 am

Hello Mr darkside676,

thank you for your VPN recommendation.

Let's talk plain text. I'm not the kind of a guy who likes to partner Up with somebody I just met, even I'm unsure if I wanna partner up in the dark art anyways. If we talk about cooperation then please let us use this forum especially this thread for tips. Tips we can give each other, can also help others.

Also please don't take it personal. Cause I'll add you to skype anyways soon as I set it up. Maybe we can form a NewbieForce in Skype or somewhere else..

My thought is: There are three ways to make a big hole (u know, not some small one.. some real big one I'm talkin about)

First: slowest but you know now how to dig a hole: You take a shovel and dig.

Second: most time efficient way but costly: you take a caterpillar and dig.

Third: most flexible and actually with the right amount on hands helping the most effective: YOU gather your friends and you dig together.

What type would you prefer? Are you a guy who want to make a network stronger. Or a solo player? Or you simple care for a special thing(e.g. Money) and use everyway to get it?

Hey also to MrPS3skills,

thanks for your post, thats what I'm talking about. Keep going. :)

LET THE BRAINSTORM CONTINUE:

Ask any question related to the dark arts. If you wanna know how to spread, or to link to files. Nobody has the answer to every question so even the smartest will have to look for an answer somewhere.

Thanks for reading and happy sharing.?

Lord_Doge - May 8, 2014, 5:53 am

I honestly prefer Cryptic VPN as you can be running the VPN and still use your real IP on HF so you don't have to keep turning it on and off. I like what you're doing here xxJokker. Keep it up ?

SIM-964740 - May 8, 2014, 6:36 am

I see you being a HQ member on Hack Forums if you keep this up, I hope to see more of you in the future.

On Topic: As for VPN's, make sure you are looking for one which does not keep logs, or at least say they don't keep logs. Next, using a VPN (with port forwarding) will solve you port issue swiftly and also put a barrier between you and the RAT. When you sign up for a VPN, do not purchase it off Hack Forums, or at least not directly. Download and use Tor, navigate to the purchase page and pay with Bitcoins. This way you will remain Anon without any trace back to you as a person or your Hack Forums account.

When you are doing anything black hat (illegal) you must never partner with someone online. If you don't often go on the internet or you haven't been shielded by your average websites, you will know that there is a backstabber and a spy around every corner. Keep a low profile and you will be safe.

This is just some information that I have gathered over the years.

Good luck,

Selcouth ?

youpi007 - May 8, 2014, 12:49 pm

Seriously you have a good writing style and actually a good plan so if you need anyone for his Linux and general network security skills I'm there.

Plus some hacking skills too.

I want to set up a botnet for the lulz, so if you let me infect some zombies too just for some DDOS everytime I feel like trolling I may invest myself and help you spread.

I've a plan that involves changing mass DNS settings in routers and pushing fake Java / Adobe

updates with our SSL-SIGNED malware.

Knownunknown808 - May 8, 2014, 2:04 pm

I am not knowing of pendrives or how to inject rat to files for spreading... Give me your ICQ. We discuss another method personally.

youpi007 - May 8, 2014, 2:26 pm

Lol so you don't know shit hows you gonna spread ur usb stick dickhead

Kabos - May 8, 2014, 2:38 pm

This is how I ratted people when I started. (I just joined recently but I used to rat people). I first found a game that kids from age 8-17 play. Some choices are Minecraft Roblox or Runescape. Maybe steam games. <-- Never worked for me. Then when you join the game of choice. Make a bs lie like mine for example feel free to use. I always say that I have a program that will make you mod on said game and to add me on skype. When they add you start talking to them. Some might want proof. If you can convince them that it works go ahead. It takes awhile to convince them. Type two people that add you might just download it without any proof. (I like those people). Then when you rat them you can go and get on their skype and convince them that there is a program or mod or a game they should try and link your rat. This plan takes a while but some times its worth it.

xxJokker - May 8, 2014, 8:50 pm

Hello HF,

I think its great! We have started earning a lot from each others. So please continue.

A VERY BIG THANKS to all of your compliments. I'm not trying to please somebody. As stated the goal is, making a compendium of questions and answers by a beginner to beginners.

Very important to say is, I'm still a beginner as most people in this part of the forum. In other words do not think I'm an ueber pro, who has thousands of slaves or anything like that. It aint so. __

Hey Selcouth,

thank you, sir. Your response to the thread was very helpful.

Hello Knownunknown808,

I'd love to talk about different methods, but I don't know the reason why we should hide our brainstorming. Maybe others would jump in and also have valueable things to add.

Thanks to everybody who is supporting this and showing it by making a post with quality! __

Back to topic.

As for the spreading part, I'm not done yet. I just take a break thinking over the same problem over and over. It's always best if you have things in your mind to solve, to think about it for a while and taking a break for some time and going back to the problem again. Most at times you see the problem from a new perspective.

But all in all. I think the methods called from everybody here, are good to get going.

I've read a while about what RAT could be useful. So some people are talking about PlasmaRAT

for monetizing with miners. But having a closer look to each slave you should go with IM3.

So my questions:

1: Is it true, as stated or is IM3 alright for getting started?

2: Also interesting to know.. is it possible with PlasmaRat or IM3 to get email contacts. For adding it to a newsletter.

I don't need/want the password or username from each mail.

Greetings and GET GOING!
