If you need any help with anything feel free to send me a PM with your issue, please be specific. If I get a PM saying "IT'S NOT WORKING IT WONT PORTFORWARD" I am going to ignore it.

What is not working:

What have you tried:

Are you getting any type of error:

Legit Hackz - May 8, 2014, 4:50 pm

nice to tutorial man! im going to keep an eye on this to recommend to new members.

Caps58 - May 8, 2014, 5:25 pm

Ok, I have a problem on my server but I can not pm you, so you can contact me on skype (just write), sorry. If you can not / do not want then tamps;)

skype: vic60400

Alright I added you on skype!

?

Kykysha - May 8, 2014, 6:44 pm

Very nice and detailed Tut. Might I recommend in the ports section maybe explain what ports NOT to use? I've seen a few posts where beginners have used port 80, also ftp and email ports. Maybe make sure they know how to check which ports are being used and to select an empty port. But all in all nice Tut and obviously a good amount of work! Deffooo (+2) here!

Thank you for the feedback!

I will update this tomorrow with some more info!

Plutonium - May 8, 2014, 7:57 pm

I appreciate the effort, but why? There's like a thouuusaaand of tutorials for this, even mine in the premium tutorials section with like 500k views p:

Not bashing or anything, I think it looks great. :)

etchasako - May 8, 2014, 8:25 pm

sorry to ask this

if I have NVPN. Do I need to portforward it to my router? or the VPN will do the job in portforwarding?

Kykysa - May 8, 2014, 8:26 pm

I think it has more to do with the new guy coming in, and their inability to use the search function. Its the reflex, shit this part isn't working! Instead of trying to figure out the problem themselves and try and find an answer they will make a new post asking for help, underneath the post that offers help for the exact problem that I'm having! It's not the lack of Tuts, its the lack of people willing to look for a resolution to the problem when its so easy to skip it and as OP said, hold your hand and be spoonfed.

SirNek - May 8, 2014, 8:31 pm

Very Precised Tutorial, unless i have a little problem, can you please add me on skype? Just 1 question ? (Sir.Nek)

pota4love - May 8, 2014, 9:42 pm

I am having issues with my darkcomet,the port-fowarding is working fine am using nvpn now when am testing on my pc after building using 127.0.0.1 it works fine but when i add my no-ip and upload this to my slaves to see them on darkcomet i do not see them but when i upload another rat with the same no-ip address i see them,the port is listenning on port 9000,and i have checked on canyouseeme.org its suces what could be the problem ?

TehReco - May 18, 2014, 3:49 pm

When i or my friends click the stub, nothing happens. How come?

Yurt - May 19, 2014, 2:17 pm

(May 18, 2014 03:49 PM)TehReco Wrote: [\[CITE\]](#) When i or my friends click the stub, nothing happens. How come?

You have not set it up correctly, that is why nothing happens!
Read the thread carefully! ?

lebesgue - May 19, 2014, 2:48 pm

Nice tutorial dude !

Just have one question : does it have an efficient remover ? (delete the server on infected pc's)

Yurt - May 19, 2014, 4:05 pm

(May 19, 2014 02:48 PM)lebesgue Wrote: [\[CITE\]](#) Nice tutorial dude !

Yes, darkcomet has a program called "DarkComet remover"

So if the infected user knows that it's DC they can download the program and remove it!

Castle - May 19, 2014, 4:08 pm

You can delete your servers remotely or as the person above said, with the remover.

?

Dedicated007 - May 19, 2014, 6:30 pm

spreading nowadays is harder than you think, even with a fud server, good luck with the setup, now you faced the real challenge of spreading

Yurt - May 20, 2014, 3:57 pm

Not really, spreading is easier then finding a good crypt tbh x)

99qwerty911 - May 20, 2014, 4:30 pm

I've noticed all these tutorials involve no-ip.

What is the need for the dns? I am running the program fine without a no-ip and I am just using my ip address. You can set a static ipv4 through windows.

In my opinion signing up on no-ip would just get more "information" out.

Thanks.

Yurt - May 20, 2014, 4:53 pm

Thanks.

That is a good question I don't know to be honest, it's just the way I've always done it, and I suppose because if you don't then the connection is straight to your IP and it would make it A LOT easier to get caught

Critique - September 8, 2014, 4:41 pm

Could I have your assistance over Skype? I'm having troubles with portforwarding.

kush1337 - September 8, 2014, 7:34 pm

can someone help me setup via teamview lol plz pm me

Squealed - November 14, 2014, 12:22 pm

I just downloaded this and it deleted itself did you rat me?

Yurt - November 14, 2014, 12:27 pm

(Nov 14, 2014 01:22 PM)Squealed Wrote: [\[CITE\]](#) I just downloaded this and it deleted itself did you rat me?

Haha no man, the clean darkcomet download is not from me to begin with, it's another user's thread, it's where I downloaded it from!

And it could be your anti-virus system deleting it, since it's a rat tool, so it gives you a false positive, some anti-virus programs just delete files without giving you any type of warning!

Lrrr - November 14, 2014, 2:15 pm

Old tutorial and still awesome and very noob friendly. Thanks op

Felicity Smoak - November 14, 2014, 4:03 pm

This is a very nice tut but i do not recommend you set them up with No-IP

Lil Durk - November 14, 2014, 4:13 pm

this is very nice thanks for this
good post op.

SIM-1483313 - November 14, 2014, 4:49 pm

A very nice tutorial for beginners, I'll refer some friends to this thread when they keep spamming me
"Hey! How do i setup a new rat?"
Much appreciated Natsu.

By the way, Gray is by far a better character than Natsu.

Regards~
