I'm pretty sure you need to jailbreak your phone.

hackaquack - May 13, 2014, 3:16 pm

My homescreen is pretty decent imo. It has all I need for the day without opening the app drawer.

This is my live wallpaper. Its pretty sweet since you can FULLY customize it and have 3 more styles to choose from. It actually syncs to the beat of the music and displays the metadata(song information) above the display. Its really beautiful and if you guys want it its called audio glow.

.Reef - May 13, 2014, 3:19 pm

God looking at all these android wallpapers make me cringe. Its so ugly and non user friendly looking. Team iPhone all the way.

(and no i did not jump on the band wagon, i've had an iphone since the first one came out.)

Do you guys prefer Google Chrome more than dolphin browser for android?

AnnuitCoeptis - May 14, 2014, 10:42 pm

I recently dropped my phone in a pool :(well... shit

It's Apex Launcher with a KitKat icon pack. I did some customizing myself, but you could probably recreate it easily.

(May 14, 2014 10:40 PM)Kangaroo?? Wrote: [\[CITE\]](#) Do you guys prefer Google Chrome more than dolphin browser for android?

Nope, Dolphin all the way. It has the most support for things from what I've seen. Flash, customization, etc. Plus, it looks really nice.

grady - May 15, 2014, 2:04 pm

Mine is invisible, considering I don't have a phone.
