Thread: [\[TUT\] How to resize images in your post, when they are too big.](#)

Finesse God - May 14, 2014, 11:09 pm

Not sure where I should be posting this so I'm just putting it here in the hope that a Staff member will move it to the correct section.

I see a lot of users on HF posting images which are way bigger than what they should be. For example, this thread: <https://hackforums.net/showthread.php?tid=4226394>

Images like these (spoilered because it's a huge image):
Spoiler [\(Click to View\)](#)

Can easily be resized without any photo-editing programs or whatsoever. You don't even have to reupload the picture.
All you have to do is add a few things to the image tag.

Original, huge image:
Code [img]<https://i.imgur.com/98je5Ep.png>[/img]
Would become:
Code [img=300x500]<https://i.imgur.com/98je5Ep.png>[/img]

300 stands for the image width and 500 is the image height.

Simple as that. I hope that I helped everyone who didn't already know of this simple trick. Works on most MyBB forums.

Code?ne - May 14, 2014, 11:11 pm
Holy shit.

Thank you. I've just been resizing them on imgur but I actually like this a lot better.

Infinity. - May 14, 2014, 11:11 pm
Instead use Picresize.com ? that helps me a lot :)

Thank you for tut op, this should clean up some posts for people and make them more hq. I think this will help others.

CyberneticTitan - May 14, 2014, 11:13 pm

Unfortunate that this method does not save the viewer some data :/

Nice tut anyhow!

Jesus666 - May 14, 2014, 11:32 pm

thanks for showing this :) i actually need this

and i think a lot other also need this :)

Shinobu - May 14, 2014, 11:34 pm

Thanks for this TUT, It will help me and others in the future

loot share - May 14, 2014, 11:41 pm

Sorry for the double quote above. For whatever reason my computer decided to submit that twice.

Aquilaane - May 14, 2014, 11:43 pm

Great Tut but it's in the help documents... <https://hackforums.net/misc.php?action=help&hid=7>
(and everywhere else)

Finesse God - May 14, 2014, 11:45 pm

Like many other people, I didn't even know it was in the [Help Docs](#).

Aquilaane - May 14, 2014, 11:47 pm

Which is why you're supposed to read it fully :P

Implying that only 2 out of 10 members have fully read the help documents.

Isildur - May 19, 2014, 10:00 am

I think, you guys should stop disrespecting threads. This is a very nice thread, a very nice one &
you are saying some words from your own world "Instead use Picresize.com".

I just LOled at that, really man, That's insanely weird reply.

:D

Super awesome tut OP. I never knew this, Thanks for sharing this!

(May 14, 2014 11:47 PM)??uL?an? Wrote: [\[CITE\]](#) Which is why you're supposed to read it fully :P
No one has much his much time to read each and every section of [Help Docs](#). HF ones are too big.

Unless you are unemployed, expelled from college/school & insanely free.

:D

Talu - May 19, 2014, 10:04 am

Great tutorial mate, thanks for sharing.

Coobro - May 20, 2014, 12:44 am

This is actually quite handy because a lot of the people on here don't know how to resize their large images.

Nice tutorial and I hope you win the cash prize! :)

Microsoft Agent #3180 - May 20, 2014, 12:47 am

A regular member that is a positive contribution to the forum..

You don't see this shit everyday.
