Thread: [wtf error/virus ????](#)

trix0 - May 15, 2014, 7:25 am

Hello guys today i got electricity error and my internet and pc falls.

router deleted login information from internet provider. So when i start my pc i did not have internet conection i got some error and in this error was a link

<http://ad.mail.ru/adj/189?a=19&g=1&di=30015&lsp=0&rnd=326417755>

Do you know guys what it says in this file ? it looks like some javascript which creating something :-)
thx for fast respond

Why do you don't contact your provider!?

trix0 - May 15, 2014, 9:20 am

provider have nothing with this maybe ? :D i just think it is some virus in my pc which is sending something and when it does not have internet conection it get an error :) so i just ask if someone can read what this piece of code is doing

it looks like it is icq so ok :-) good to know

Shapid9 - May 15, 2014, 10:35 am

It is some type of ad ware, I recommend you install malwarebytes and run a through scan.

Niely - May 15, 2014, 11:07 am

It isn't something that serious. :)

I think it tries to manipulate the style (CSS - Layout) of a website, it refers to this URL:

<http://download.icq.com/download/icq/ru?partnerid=487>

Just scan it with MalwareBytes/Avast/Your own AV and you should be fine. ;)
