Thread: [Kaoxic's Doxing Tutorial \(First HQ Tutorial\)](#)

Hire - May 15, 2014, 9:03 am

The Beginning

Welcome to Kaoxic's doxing tutorial, i use these methods to dox people, and it work pretty good! First, you want to look at the profile/name he or she has. It's also pretty important to think about what kind of person they are. Let's say the person is someone who likes to do gamebattles, he would probably have a skype.

Alot of people do have a skype, a really easy thing to do, is resolve their skype IP, and resolve their skypes with their IP. This can be done on the skype resolver below.

Some people might use a VPN on their skype, but their old IP could be saved. Also think about in what country they live, this makes it much easier. Most of the time you can find this on their profile.

Now, when you got their username/profile name, we're gonna search for some more information. I really like those sites:

www.pipl.com Can be usefull with an email or username.

www.tineye.com Reverse image searching, this can be used to trace back custom avatars or images.

www.zabasearch.com Another lovely search area when you have more information.

www.lullar.com is amazing if you can get their email.

<http://whois.domaintools.com> if you can get their IP.

www.ip-address.org/tracer/ip-whois.php Nice IP Tool, same as above.

<http://whois.net/ip-address-lookup/> Same as above, but different sites.

www.BlackBookonline.info Lookup for illegal activities done in area's.

www.whatstheirip.com IP Logger.

<http://viewmy.pm/google/> Google redirect exploit.

<http://mostwantedhf.info/> Skype Resolver.

<http://knowem.com/> Lookup for username on multiple platforms

Getting the IP Adress

This shouldn't be a big problem in a lot of cases, if the user uses skype, simply use a skype resolver. You can also use an IP logger, and use the Google redirect exploit above. I really like that method.

You can also combine Skype And Wireshark to sniff the IP, this requires a basic knowledge of Wireshark.

Pulling information off an IP address

There are many methods of pulling information off an Ip, most common trick that I will share with you today, is geolocation and isp information. This also includes a varient of ISP doxing.

Once you have pulled the persons IP Address through a skype resolver, or a trick website. You may then proceed to order a whois on the IP. This can be done through the sites listed above.

Pulling information off a skype name

Obviously you arn't going to find all his real information just from skype. This is why it's recommended to use some handy searching tools such as google. Say you met a guy named Yourmother12345 on skype, he has his profile closed, but you know his skype name. You could commence to open up chrome and search for Skype:Yourmother12345 in the search box, this

would give results where he left his skype, this can be for multiple reasons. Maybe even to talk, this could yeild an online profile, an old alias, a community he owns or maybe even a facebook account. This also works for other services such as Steam: Yourmother12345 or IGN:Yourmother12345 IGN: In Game Name

A lot of kids, most of the time in Gmod, Minecraft and other games that are popular by kids, they list there name in that form. This can be crucial to finding more information about the person.

Skype & Facebook

Now, Social Media is a goldmine in the world of doxing, it offers you an incredible amount of information about the target. A method of linking skypes to FB is <https://www.facebook.com/?sk=ff> You first create a fake profile on facebook, then log into your skype and click find friends. What it will now do is say: Hey Facebook, this is skype here, mind taking all of my contacts, leeching their emails and searching for them, then putting them in a scroll down area. Then, a simple box where you can scroll in will be presented, simply CTRL+F for a search box, put your victims name in and see if he has a FB connected to his skype. If he does, you're one step closer to the full Dox. You can now go to his profile by searching his profile, look through his friends and put his last name in there, then search for his parents.

Paypal & ISP Doxing

Paypal is an amazing payment system to dox from. A great way to get information quickly, 0,01\$ to the person. Once you sent him that money, you will receive a message, that will look something like this :

You have sent 0.01\$ to (Name) This can be very usefull, because you will get the name really quickly, all you have to do is geolocate from an IP you got, Look at his area, country or search on www.Anywho.com and get his adress like that. You can also trick him into selling a product to him (Can be fake) and he will give you his adress, but be aware, you have a chance this is fake.

It's all about Social engineering. You basicly want to convince the target, your him. Everyone has a heart, so do they. Try to make them emotional, ask why your internet is down and not up. Say things like: My daughter got too late at school because she couldn't check her school website, and now she is mad at me and has to cry! Once you're doing is more, it will feel more natural.

Thanks for your time, i hope you enjoyed reading this. This is my first "Good" tutorial, i think. Please leave down below what you wanna see more! I will probably be making a part 2, and an "Anti-Doxing" tutorial.

Note: I also used other sources to make this tutorial, but i typed everything myself.

Also, i'm sorry for my bad English. It's not my mother tongue. Did this in 3 hours, and i'm really tired right now! Have a nice day!

Gilfoyle - May 15, 2014, 9:05 am

Great tutorial OP.

This was very helpful. Thanks!

Hire - May 15, 2014, 9:06 am

Tigerr - May 16, 2014, 4:27 pm

This is very similar to the ebook AmityDox, it's not exactly the same, doesn't have much detail, but I can see a few quotes from it in here.

Legion. - May 16, 2014, 10:29 pm

Great Thread! Very informative and helpful.

Mizuki - May 16, 2014, 10:32 pm

Great In-depth Tutorial OP . Keep it up

Hire - May 16, 2014, 10:51 pm

I have never heard of this, to be honest. Was it sold on HF?

Also a friend on skype helped me with this abit, but he isn't on HF. He might've done that.

Eeluminati - May 17, 2014, 1:09 am

Well done tutorial. TBH I didn't know about a few of the websites listed.

Also, you had quite a few grammatical errors.

I will work on that today/tomorrow, hopefully i can help some people :)

Chaorii - May 17, 2014, 10:05 am

Finally, there is a "Doxing Tutorial" that isn't copy and paste. ?

Thanks a lot.

BeatHimUp

No problem! I'm glad i could help you out!

hahdbwoannniabs - May 17, 2014, 6:03 pm

I wouldn't say it's HQ but it's definitely better than all of the other doxing tutorials that most people post. It's one of few that actually mention ISP doxing.

StayMint - May 21, 2014, 7:42 pm

Nice tutorial.

Need someone doxed?

Elixirz - June 30, 2014, 6:29 pm

The links you provided are very useful. Thank you for this.

Die Jude - June 30, 2014, 8:01 pm

Nice tutorial, although doxing is pretty straight foward, Google is your best friend :)

DeplorSocio - November 19, 2014, 11:37 pm

Thanks for this again, OP. Really appreciate the time you spent on making it.

ca9a2536fd8b17df76f7ee082 - November 19, 2014, 11:41 pm

You're missing a lot of information, ha

There are a lot of things you're leaving out actually.

Hire - November 19, 2014, 11:53 pm
