What is the point of having a file called image.jpg? O.o Thanks for releasing this though OP!

Yes to use the bot, but you can also vote as many times as you want by typing in the captcha yourself with just firefox and ipfuck addon

Depends on the certain servers you go on and I've found that certain ones allow you to refresh the page and keep going for multiple votes.

I just tried it out a few minutes ago and racked up them 20+ votes.

I could do it as many times as I want because I was refreshing after I voted and rinsed and repeat.

hahaha - June 22, 2014, 9:56 am

Can you give me a version without the DBC? Or can you just remove the DBC and it'll work?

DeathByCaptcha. It's what fills in the captcha to check if its a real person.

Pooplenator - August 16, 2014, 12:05 pm

I use this a lot, thank you Delgado804!

Just remove the image line and it would probably work.

Aschorren - November 20, 2014, 10:51 pm

Would this by chance work on Mac?

Please PM me the answer.

NeoMetalta - November 20, 2014, 10:56 pm

Radioactive/unstable elements are called radioactive because they go through radioactive decay. this is a process where the element/isotope loses a combination of neutrons and protons (could be a number of different combinations depending on the element) and creates energy (usually). This is how nuclear fission works.

Gaius - March 5, 2015, 4:43 pm

Any chance you know python?

I need a lot of bots written, I'm sure we could come to some sort of arrangement. Is paypal alright? I guess I could do bitcoin if needed as well.

PM me your contact details, quite an impressive little bot you have there.
