Thread: [Drizzy's Email Bomber V1](#)

Drizzy?? - May 18, 2014, 4:22 pm

How it works:

Uses up to FIVE existing email accounts (works with hotmail/live/outlook/yahoo/gmail) to send mass amount of emails.

NOTE: The victim will be able to tell what email it's being sent from. I can not fix is. I do recommend making 5 new accounts.

Features:

- *Proxy Support (With proxy grabber)
- *Up to FIVE email accounts for faster sending
- *Choose how many emails to send, or to never stop!
- *Sleek new design (Custom theme by: [Xertz](#))
- *Multithreaded to prevent UI crashes
- *Phone Carrier Resolver
- *Easy to use cell phone carrier chart
- *Automatic Email host/port resolver

Instructions:

- 1) Download and open up the program.
- 2) In the E-Mail settings menu located on the bottom on the program, click one of the emails that aren't set.

It will then prompt you for your email username/password.

You can do this step for up to all 5 emails. The more emails you input, the faster it will send.

- 3) Enter a message and target to bomb. Use the cell phone carrier resolver and "How to bomb cell phones" to determine how to bomb cell phones.
- 4) Choose which emails you'd like to bomb
- 5) Choose how many emails you'd like to send. Or leave it at 0 for it to go nonstop.
- 6) OPTIONAL: Click Proxy settings and connect to a proxy server.
- 7) Click start!

Requirements:

At least ONE hotmail/gmail/yahoo email

Microsoft .net framework 4+ (Latest framework [HERE](#))

How to get:

Virus scan: [CLICK HERE TO SEE VIRUS SCAN](#)
