Thread: [\[RedLion\]A tutorial about everything you need to know of RATs| Basic to Advance| Pics](#)

Jinu - May 18, 2014, 10:49 pm

Introduction:

Hello everyone,

This is Jinu. I'm very glad to share this tutorial with you. I know there are plenty of same kind of tutorials available here. Hence, many folks are struggling to understand it and having lots of questions about RAT (Remote Administration Tools). Here I started this tutorial from Basic to Advance. So everyone can understand how to handle the RAT and If they have any questions or problems, that too will get solved easily. This I share with you is what I have learned and with my experience. This tutorial is brought you by the great group RedLions. Okay, let us move on.

What is a RAT (Remote Administration Tool)?

RAT is an acronym of Remote Administration Tool. It's a program or software.

What a RAT allows you to do is to take full control of another one's computer without their knowledge.

There are many RATs (Remote Administration Tools) available in the market with different features. They are including free RATs and paid RATs. You can see all the RATs currently available in the market [here](#).

How does it work (Working model)?

With the help of Remote Administration Tool, you will create one "Program". That is called "Server.exe". Once you send that to your friends or enemies, If they click that file, their computer details will be seen in your RAT. So you can control their PC, steal their passwords, watch their activities etc... without their knowledge. And It will be show like this:Spoiler [\(Click to View\)](#)

How to make your PC ready before start RAtIng?

While opening RAT, creating server.exe, opening ports, outgoing-incoming connections, your Anti-Virus or your firewall won't allow this process. It will affect your RAtIng process. So you need to completely disable your Anti-virus, firewall, and any other blocking software.

Okay, we move on to the next step.

What are the things require before you start RAtIng?

The Remote Administration Tool alone will not help you to RAT, someone. It requires some other tools too.

Here are the list: Spoiler [\(Click to View\)](#)

Remote Administration Tool. [Click here to see all the RATs](#). You choice one. I have Chosen the RAT (Remote Administration Tool) called DarkComet 5.3 which is free and noob friendly for this Tutorial. Before you download, turn off your Anti-Virus and Windows Defender.

DUC client.[Click here to download](#). or [Free DNS client](#)

Crypter (You have to buy or search for free one) I recommend you to use my friend's ["Kazy Crypter"](#).

VPN (Optional but recommended). (You have to buy in the market)

Virtual Machine (Optional but recommended)

Okay. I hope you have collected the things.

How to setup a RAT?

In this tutorial, I have chosen the RAT called DarkComet 5.3. And many of the RAT will have almost same settings like this.

The setup process will consist of:

Creating no-IP account. Or creating FreeDNS account.

Setup DUC client. Or setup FreeDNS client.

Setup your RAT.

Portforwarding.

Crypting

Spreading

1. Creating no-IP account or Creating FreeDNS:

Creating no-ip account ([Click to View](#))

I) To create an account in no-ip, first you have to go to the following URL:

<https://www.no-ip.com>

II) Then click on the Sign-up. It will give you this form:Spoiler ([Click to View](#))

And you fill up as I mentioned in the image.

III) Confirm your email and activate your no-ip account:

Spoiler ([Click to View](#))

IV) Once you finished activated your account, you need to add a host.

Spoiler ([Click to View](#))

V) It will give you another form:

Spoiler ([Click to View](#))

And fill out as I mentioned. Leave the other options as it is.

VI) Finally, It'll be like this:

Spoiler ([Click to View](#))

You're Done.

or

Creating FreeDNS account ([Click to View](#))

<https://hackforums.net/showthread.php?tid=4251545>

This thread has the tutorial of how to create and setup freeDNS. It's an alternative to no-ip

2. Setting up the DUC client or Setting up the FreeDNS client:

Setting up the DUC client ([Click to View](#)) I hope you have downloaded the DUC client. If not, download it from here:

<http://www.noip.com/download?page=win>

I) Install then open your DUC client and login.

II) Once you logged in, Click on the "Edit host"

Spoiler ([Click to View](#))

III) There you can see your host which you recently created. Mark that checkbox and click "Save".
Spoiler ([Click to View](#))

IV) Your DUC client will be synchronized with your IP address and It will be shown as like this:
Spoiler ([Click to View](#))
You're Done.

or
Setting up the FreeDNS client ([Click to View](#))
<https://hackforums.net/showthread.php?tid=4251545>
Please refer to thie thread for how to setup FreeDNS.

Jinu - May 18, 2014, 11:12 pm

3. Setup your RAT(Remote Administration Tool):

Don't panic. It's a piece of cake. I have chosen the RAT DarkComet. I hope you have downloaded that RAT client. If not, download it from [here](#).

a.) If you do not have Crypter, go with this settings (Default settings):

Spoiler ([Click to View](#)) Before you start understand one thing. If you do not have crypter, your server.exe which you are going to send to your enemies or friends will be detected by their Anti-Virus and It'll be deleted. So you cannot get them in your RAT. Anyhow, this way you need to setup your RAT. If you do not have a crypter.

I) Open up your DarkComet.exe. Once it opened, click on the "Dark-Comet" tab.

II) Then click on the "Server Module"> "Full Editor" as shown in the image below:

III) It will show you one page. In that, Click on the "Main Setting". And click 5 times on the "Random" button. Then fill the Server ID name and Profile name.

IV) Then click on the "Network Setting". Enter your no-IP and port.

Once you Click "Add", Click on your no-ip:port it will be shown like this:

V) Now click on the "Module Startup". Then select "Startup". Change the "Drop file into" to "APP#". Then select "Persistence Installation".

VI) Click "Stub Finalization". Then select "Save Profile". Then Click "Build the Stub".
It will promote you to save a file. You can save that in your PC. That is called server.exe. Which you're going to share with your friends or enemies.

You're Done.

b.) If you have Crypter, go with this settings:

Spoiler ([Click to View](#)) If you already have crypter, most of the settings you have to do in your crypter such as "Start-up", "Persistence". etc..

I) Open up your DarkComet.exe. Once it opened, click on the "Dark-Comet" tab.

II) Then click on the "Server Module"> "Minimalist" as shown in the image below:

III) Enter your "Stub ID" name. You name it whatever you want. Enter your no-ip address without mistake. And enter your port. Here I used 1604. And click "Normal". And save the server.exe somewhere and crypt it by using your crypter.

FAQS:

Spoiler ([Click to View](#))1. Q. My Anti-virus alarm about this RAT tool what to do?

A. If your Anti-Virus Popup a window saying this RAT is a Virus, It is normal this program can be use for malicious reason that's why it's a false positive.

2. Q. I have downloaded my RAT when I extract it, some files are missing why?

A. Check your Anti-Virus and Windows defender status. You must disable it else it will delete your RAT.

3. Q. When I click listen ports, It shows listen error why?

A. Because you already listen to the same port.

4. Q. I have created the server.exe. When I run it on my PC, it does not work why?

A. If you want to check it in your PC, in the "Network setting" tab in IP/DNS enter the local host 127.0.0.1 instead of your no-ip address.

5. Q. I do not get any slaves

A. Check your DUC client is running. Check your ports are open. If you set password in the "Edit Server", do not forget to apply exactly the same in the "Client Settings".

6. Q. I tested my server.exe in my VMirtual Machine. I don't get any sign of my PC list there.

A. Be sure use Bridge mode instead of NAT mode.

4. Portforwarding:

Note: If you're having VPN with open ports, you do not need to follow this step. You go ahead to the next step.

Many of them are thinking that portforwarding is the hardest part in RAtIng but that's not correct. This is a very easy part. There are few methods available: Portforward via router/modem, portforward via torrents and via software.

What we are going to do is, open the port in our network which we recently used in our RAT. That is 1604.

In order to open the ports, first you need to disable your blocking software such as like Anti-Virus. And you have to disable your Firewall.

a.)Method -1 Portforward via router/modem:

Spoiler ([Click to View](#))I) Open your CMD in admin mode. (Right-click on your CMD and Run as Admin).

II) And in your CMD, type "ipconfig" and click enter.

III) It will show you your PC and your router/modem IPs. You see for the "Default Gateway". It will be like this: Example (192.168.1.1 or 192.168.1.254 or 192.168.0.1 or something else)

Spoiler ([Click to View](#))

IV) Copy that "Default gateway" IP and paste in your browser and hit enter. Once you hit enter, It will navigate to your Modem/router login page.

V) You need to login. If you do not know your Router/Modem username and password, you can call your customer care but most of the login will be like this:

Code Admin-Password

Admin-Admin

Admin-Root

Admin-User

Admin-Or you can check in google with your router name. You can reset your modem/router to get back the default password.

VI) Once you logged-in, you can see your modem/router features and settings. This settings and features may vary depend on routers/modem model.

I'm having "Thomson Modem". So I can teach you with this modem.

VII) In modem, Navigate to toolbox>Game & Application sharing. Then click "Create a game or application."

Spoiler ([Click to View](#))

In most of the modems/routers it will be in Advanced Setup, Portforwarding.

VIII) Enter the name of the application. I entered "Darkcomet RAT". Click next.

Spoiler ([Click to View](#))

IX) Enter the port that you recently used in your RAT. That is 1604.

Spoiler ([Click to View](#))

X) Now you need to assign that port. For that, Click on the "Assign a game or application to a local network device".

Spoiler ([Click to View](#))

XI) Now select the name "DarkComet RAT" (which we recently created) from the list. And in the device select your current PC. If you're not sure about your PC name, click on "<User-Defined>" and enter your IPv4 Address. You can get your IPv4 address in the CMD by typing "ipconfig". Then click "Add". It will be added in the list.

Spoiler ([Click to View](#))

XII) Check whether your router/modem is having firewall. If it has, disable it.

XIII) Now open your RAT. Then go to <http://www.canyouseeme.org> and enter your port. We have added 1604. So enter 1604 and click "Check Port".

Spoiler ([Click to View](#))

XIV) If it gives this message: "Success: I can see your service on 117.213.33.136 on port (1604) Your ISP is not blocking port 1604," you're successfully portforward .

And you're done. You can able to receive the connection from your victims.

Spoiler ([Click to View](#))

If you're getting any error, like connection timed out, connection reused, you should counter check your settings and steps. Or try the next methods or read the faqs or post here:

<https://hackforums.net/showthread.php?tid=4219663>

b.) Method-2 Portforwarding via torrent:

Spoiler ([Click to View](#)) I) Go to <http://utorrent.com> and download and install the utorrent client.

II) Once you downloaded, open your utorrent and go to options>Preference.

Spoiler ([Click to View](#))

III) In the preference, Click on the "Connection" tab then enter the port you used in your RAT. I used 1604 so I entered 1604 then Check mark the following options- UPnP port mapping, Enable NAT_PMP port mapping, and Add windows firewall exception. Then Click "Apply".

Spoiler ([Click to View](#))

IV) Now open your Darkcomet RAT. And make sure it's listening to the port 1604.

V) Now open your RAT. Then go to <http://www.canyouseeme.org> and enter your port. We have added 1604. So enter 1604 and click "Check Port".

Spoiler ([Click to View](#))

If it gives this message: "Success: I can see your service on 117.213.33.136 on port (1604)

Your ISP is not blocking port 1604," you're successfully portforward .

And you're done. You can able to receive the connection from your victims.

If you're getting any error, like connection timed out, connection reused, you should counter check your settings and steps. Or try the next methods or read the faqs or post here about your problems:

<https://hackforums.net/showthread.php?tid=4219663>

c.) Method-3 Portforward via software:

Spoiler ([Click to View](#)) I) Go here: <https://hackforums.net/showthread.php?tid=4154122>

II) If you have any questions, post in that thread.

FAQS:

Spoiler ([Click to View](#))

Q.When I type IP config, I do not see any default gateway or it shows me "0.0.0.0"

A. It shows, that you do not have access to your router. Sometime you do not need to portforward. Without portforward your RAT will work. Sometime you cannot portforward so you need buy an open ports VPN.

Q. I portforwarded correctly. When I check my ports on canyouseeme.org It gives me error.

A. Check whether your RAT is listening to the corresponding port. If not, listen the port. Check your DUC client has synchronized with your IP. Check whether you have disabled your firewall in your PC as well is in your modem/router.

Q. The port you used is blocked by your ISP.

A. Try to use some other port.

5. Crypting:

This is the ultimate stage in your RAT. You have fully set-up and portforward your RAT now

you want to crypt it to protect your server.exe from your victim's Anti-virus.

For this you need a program called crypters. There are many crypters available in the market. You can buy or get free one. It will help you to protect your server.exe from your victim's Anti-Virus. You can see about crypters here: [Cryptography, Encryption, and Decryption](#)

If you need any other help regarding crypter questions, post here:

<https://hackforums.net/showthread.php?tid=4219663>

5. Spreading:

There are many way to spread your RAT server. Here I have shared some basic methods.

Before you spread your server, make it FUD with the help of your crypter.

a.) The Torrent Method:-

Spoiler ([Click to View](#)) One of the good ways to spread is to create a torrent with your virus in it. You can get a torrented Skyrim, and bind Skyrim with your virus, and re-upload it to famous torrent websites. (Example: piratebay.) Doing this can get you hundreds of slaves. I would also get a few friends to rate your torrent well, because if you don't, expect your torrent to get some bad ratings if people figure out its backdoored. Else either your torrent will be removed or you will be banned from the site.

b.) The Omegle Method:-

Spoiler ([Click to View](#)) This one is simple. This requires social engineering skills, though. Basically what you can do is go on Omegle and say something like attractive or something. Basically get the person to want a photo pack of you. Then, bind your virus to a few photos you can get offline. Ask them to see and tell them what you think, and boom. You got you a slave. This is slow, but you can kinda pick out who you want as a slave.

c.) The YouTube Method:-

Spoiler ([Click to View](#)) For this you need a fake program. Get one fake program. For example (COD crack or any other games trainers). Bind your virus with the fake program and make one video and upload it on Youtube with your virus link. Boost your Youtube video views and likes and comments by using any social boost. You'll get some loads of slaves.

To get hot girls as slave and more, post here:

Spoiler ([Click to View](#)) <https://hackforums.net/showthread.php?tid=4219663>

How to don't lose your slaves?

Losing slaves may get irritate. The main causes is due to your server got detected by your slaves Anti-Virus, your server may not executed correctly due to .net requirement, your server may killed by others server(botkilled). To don't lose your slaves, you need to update your server of your slaves. And keep it FUD. To update your server:

I) Create new server.exe in your RAT. (Use Crypter settings)

II) Then crypt your server by using your crypter. Make sure use "Persistence" in your crypter and also Ani-Botkill (If available)

PS: I recommend you to use no dependency crypters.

III) Upload your server in to any host with direct link. Example: ge.tt

IV) Then right click on your slave whom you want to update and Click "Update from URL" or click F7 button.

Spoiler ([Click to View](#))

V) Then enter your URL and click OK.

Spoiler ([Click to View](#))

VI) Or Right click on your slave whom you want to update and click "Update from file" or F8 button. Select your file and click OK.

Spoiler ([Click to View](#))

This way you can update your server and keep your slaves without losing them.

How to hide yourself?

I always recommend you to use VPN and Virtual Machine.

There are many different VPN's out there and the main difference between all of them is the encryption, if it supports port forwarding and if the VPN stores log files it's not good.

It's important to have a VPN which doesn't store any log files at all. Log files are files which are kept if you surf around on the internet using that VPN.

Encryption is basically how strong the connection between you and the VPN is coded.

And the port forwarding part is also important to people who RAT, because some people have routers which don't support port forwarding at all. So go with VPN that supports portforward plus no logs. I recommend you to use nVPN: <http://www.nvpn.net>

-When you are using a VPN, always make sure you are using (listening) to that port before checking on a website like; <http://www.canyouseeme.org>

-Always make sure to run your VPN as an administrator.

Using a Virtual Private Server(VPS), is also a good thing to do. You will basically have a virtual computer where you can do whatever on. You can find some good VPS providers in this list:

<http://www.bestvpsproviders.com/>

How to remove RAT infection from your PC?

While RATING, you may get infected or not. You may know or not. That's not a big problem you can remove it by yourself.

a.) Darkcomet RAT remover:

Spoiler ([Click to View](#)) By this tool you can scan your PC and remove the infection. You can download it here: Spoiler ([Click to View](#)) <http://ge.tt/6rx6PXh1/v/0?c>

Scan Link:

<https://www.virustotal.com/en/file/98e3d460afd027b3d6b8a0d97c06c7e225c0cb0fbc9e4f638f5f9768bd5e6cff/analysis/>

b.) By navigating to the virus:

Spoiler ([Click to View](#)) This is another known method netstat.

I) Open your task manager by clicking the buttons "Ctrl+Alt+Del" then navigate to "Details" Then click PID to organize it.

Spoiler ([Click to View](#))

II Now open your CMD and type "netstat -ano" without quotes. It will show a huge list. You'll see for the "Established connections" and it's "PID"

Spoiler ([Click to View](#))

III) Now check with those PID's in your task manager:

Spoiler ([Click to View](#))

IV) It shows "jindu.exe". If you think it's nasty, You should open the file location by right clicking it and pressing Open File Location. If the file exist, then stop that process. And delete it.

C.) By White HAT:

Spoiler ([Click to View](#)) If you think you can't or don't know to remove, You can go to this section:
<https://hackforums.net/forumdisplay.php?fid=115>

Jinu - May 19, 2014, 10:09 am

How to play with your slaves?

There are lots of fun stuff available to play with your victims. It will be fun at the same time dangerous too so look before you leap.

Fun Manager:-

Spoiler ([Click to View](#)) You can access the fun manager by right click on the slave and click "Open control Center". You will find the "Fun Functions". With this you can open/Close the CD/DVD drive, Change the mouse click, disable taskbar, hide time etc..

Spoiler ([Click to View](#))

Remote Scripting:-

Spoiler ([Click to View](#)) More than that, Remote scripting is available. With that you can spam, delete, hide the files.

Spoiler ([Click to View](#))

You just copy and paste the scripts.

Thank you khosti for his scripts.

Here are the scripts: Spoiler ([Click to View](#)) Delete

Delete all Documents - <http://pastebin.com/raw.php?i=0NUaHmdf>

Delete all Music - <http://pastebin.com/raw.php?i=J9i71axE>

Delete all Pictures - <http://pastebin.com/raw.php?i=xCezgByP>

Disable

Disable Firewall - <http://pastebin.com/raw.php?i=JaKWPxMM>

Disable Internet - <http://pastebin.com/raw.php?i=EWaUMZiS>

Disable Keyboard - <http://pastebin.com/raw.php?i=N1z40nvx>

Infect

Infect all Batch Files - <http://pastebin.com/raw.php?i=shbHHX7b>

Infect all .docs - <http://pastebin.com/raw.php?i=CxzMHNx2>

Infect all Drivers - <http://pastebin.com/raw.php?i=iPRmgMs8>

Infect all .exe files - <http://pastebin.com/raw.php?i=uurrG403>

Infect All HTML Files - <http://pastebin.com/raw.php?i=TuPWye55>

Infect CMD - <http://pastebin.com/YX0rgZeX>

Block

Block Google - <http://pastebin.com/raw.php?i=in4bq8is>

Kill

Kill Antivirus - <http://pastebin.com/raw.php?i=KeHbNzKy>

Spam

Spam /C Drive - <http://pastebin.com/raw.php?i=fpcG9ZCR>

Fun Sites:-

Spoiler ([Click to View](#)) There are lots of fun sites available to prank your slaves. Here are some.
Thanks to aspirin.

Caution 18+:

<https://hackforums.net/showthread.php?tid=995444&pid=9247798#pid9247798>

To do this, right click on your slaves then go to "Extra Broadcast Commands">"Open web page"

How to earn money with your slaves?

Adfly, Adfocus...

You can earn money with your slaves by viewing your adfly, adocus...etc links. This is simple to do. You need some loads of slaves from various countries to earn a lot. And you can do this by using the option called "Visit webpage"

Mining:

Some new RATs are built with miner support. With that you can earn crypto currencies. It depends on your slaves system configuration.

DDOS:

If you're really have loads of slaves, you can do DDOS services to earn money.

For all, you need loads of slaves. If you cannot able to get slaves, you can buy slaves from the market. You can also try botnets to earn a lot. I'll make seperate tutorial soon.

Jinu - May 19, 2014, 10:13 am

Miscellaneous:

Where can you upload your server.exe to get the direct link?:

These are the non-distribution sites.

<http://www.sharesend.com/>

<http://www.rghost.net/>

<http://dox.abv.bg/files/share>

<http://www.filetolink.com/>

<http://directxex.net/>

<http://www.filesplat.com/>

<http://www.ge.tt/>

Where can you scan your crypted file?:

These are the non-distribution sites.

<http://nodistribute.com/>

<http://razorscanner.com/>

<https://anonscanner.com/>

<http://scan4you.net/>

<http://scan.majyx.net/>

Where can you test your server.exe?:

To check your server.exe whether does it work or not,

1. Navigate to <http://anubis.iseclab.org/>

2. Choose your server.exe

Spoiler ([Click to View](#))

3. Once you uploaded, you will receive one connection for few minutes. This way you can understand that your RAT is working.

How to bind your server with another file?:

A binder is a tool that does what it says, it binds multiple files together into an application. It is important to note that binding a file might cause your server to become detected, so it's always better to use your crypter's. The output of your file is going to be an executable when you bind things together, which is why spoofing and icon changing come to be useful, it is also why choosing a good crypter is an important step. You can use (Celesty Binder) that comes with DarkComet. Most of the crypters are build with binders.

How to change your server icon?

a.) ResHacker Method:

Spoiler ([Click to View](#)) 1. Download ResHacker and install it. You can download from here:

<http://www.angusj.com/resourcehacker/>

2. Open it up and find the exe you want.
3. Expand Icon Group, and find the Icon you want
4. Right click the resource and choose the second Save Icon Group
5. Save the icon somewhere
6. Now open up your server with ResHacker and head back to Icon Group
7. Right click the resource and press Replace Resource
8. Click on 'Open file with a new icon' and choose the Icon you saved or found online,
9. Press Replace.
10. Now go to File, and choose Save As.

b.) Icon Changer Tool method:-

Spoiler ([Click to View](#)) <https://hackforums.net/showthread.php?tid=232221>

How to spoof your server?:

Spoofing is where you alter the extension of the file to display it as something else. Most crypters come with this features.

a.) Manual Method:-

Spoiler ([Click to View](#)) 1. Open your Windows homepage and type "Character Map".

Spoiler ([Click to View](#))

2. Open your "Character Map" and search for U+202E

Spoiler ([Click to View](#))

3. Rename your file, by right clicking before the '.' in your extension and paste the character, using Ctrl + V and type your needed extension in reverse.

Spoiler ([Click to View](#))

4. Press enter. You're done.

b.) Program Method:

Spoiler ([Click to View](#)) This is easy one you can do this by program:

<https://hackforums.net/showthread.php?tid=1429385>

Code Words: RAT - Remote Administration Tool

UD - Undetectable

FUD - Fully Undetectable

TV - Team Viewer

PF - Port Forward

AV - Anti-Virus

VM - Virtual Machine

Crypt - Encryption

Install, bot, slave, victim - The person whom you RAT-ed.

Bot Killed - Your bot/install/slave/victim get deleted in your RAT by someone else.

Honey Pot - A honey pot is often a trap set by someone may be the AV company or anyone to lure and trap hacking attempts.

hackcitybich - May 19, 2014, 11:22 am

I'm very new to this stuff and reading this guide made everything a little easier to understand.
Thanks for your time :D

Goodies - May 19, 2014, 10:26 pm

Let me first state that I'm not at all interested in any form of mainstream RATs so this tutorial does not interest me personally.

That being said, having created many tutorials myself, I know how incredibly time consuming this must have been. Everyone reading this should stop and say thank you to OP (even if you're like me and are not interested in RATting) because his hard work and several hours that he put into this thread are going to immensely help those that need it. When we receive "thank you"s and gratitude from members that can use our tutorials, or even receive notoriety from members who appreciate the work we put into it, it is a huge pat on the back for us and is very welcomed.

Very well done!

Ghost Rider™ - May 20, 2014, 1:01 am

Outstanding tutorial, Just Awesome.

Very detailed and HQ tutorial !!

?Mr Blade™ - May 21, 2014, 3:53 am

nice tutorial bro. u always comes with nice tutorials :)

Peppermint Butler - May 21, 2014, 6:55 am

Thanks man for the tutorial! This must of taken you a long time, I appreciate your hard work. ? helping dem noobies.

kalai - May 21, 2014, 7:19 am

thanks bro, detailed presentation , can you have tuorial with ur simplified steps for keyloggers too ?
thank you again

Doxicity - May 21, 2014, 7:21 am

(May 19, 2014 10:26 PM)Goodies Wrote: [\[CITE\]](#) Let me first state that I'm not at all interested in any form of mainstream RATs so this tutorial does not interest me personally.

(May 24, 2014 01:04 PM)StashCash Wrote: [\[CITE\]](#) How do i know what port number to use? How do i find mine?

You can use whichever you want, as long as it's not used by some other app. Personally, I'm using 1604. You can use 82, 100, 1337, 5150 or 5555 or 3333 anything.

STR™ - May 25, 2014, 3:47 am

Very Good Tutorial Brother,,It will really help people a lot.. Well done..

5chn4pp - March 4, 2015, 4:29 am

Hey this is really useful, thanks for this

fgoldberg - March 23, 2015, 9:24 pm

Really a great Tut, thanks a lot Jinu!

Dickface - May 1, 2015, 9:28 am

Thanks for this

(also posting to keep track of it)

Dreamsphere - May 3, 2015, 1:45 pm

Thank you! Would have taken me ages to figure all of this out on my own.

MercyG - May 3, 2015, 3:28 pm

Best, most informational thread I've read on these forums to date! Awesome job and much appreciated. Wish I had found this a long time ago.

polopolo - May 13, 2015, 4:10 pm

Thanks for that! I m on my way to have mentoring session but I feel less stupid than 30 minutes ago. Excellent job. Thanks a lot.

shabbu.shah - June 26, 2015, 11:26 pm

Thanks A Lot Nice Tutorial Bro !!!!!

s??l?s? - June 27, 2015, 1:02 am

This tutorial will definitely help lot of people,you didnt miss anything brother.keep the HQ work...

Eternal. - June 27, 2015, 2:48 pm

A high quality tutorial, keep up the good work.

Jinu - June 27, 2015, 10:03 pm

Incendiary. - August 9, 2015, 7:09 am

This is a very HQ tut that will help alot of new members. Afew things in it are outdated but the message is the same (no-ip is bad >:-D)
Hopefully more people will see it

Jinu - August 9, 2015, 9:36 am

Yes buddy, I have to update it.

Vector.A+ - August 9, 2015, 9:39 am

Pretty legit thread , very nice I hope you go on like this

Royal ! - August 9, 2015, 10:12 am

Nice tutorial Jinu. Also, that Read lions Userbar looks sexy on you. ?

l0phtdevil - July 12, 2018, 7:16 am

Really Impressive Tutorial, Thank You For The Detailed Tutorial

americanpal - July 25, 2018, 9:18 am

I was searching for this tutorial on this forum and finally a samaritan moderator guided me through he's post. How do I bookmark this thread? So in future I don't want to search it.

Com Puer - November 29, 2025, 9:55 pm

well explain thanks sir

blackvain - *December 22, 2025, 9:24 am*
great tutorial. learnt alot thanks!
