Thread: [TabContent.JS \(no big issue :P\)](#)

Isildur - May 19, 2014, 12:16 am

Hello there,

I saw that this javascript file: Tabcontent.js loads on every page, & i believe that its used only on index (Correct me if I am wrong.)

If I am correct, I think that we should just change it to be included in only index & not in headerinclude..... It may help in saving some bandwidth & you know speed up loading for some users (yeah, because its ONLY 8 KB file xD)

Anyways, just wanted to post this.

- I hope this doesn't fall under DESIGN CHANGE SUGGESTION xD -
?

Skorp - May 19, 2014, 7:04 am

There is no real significant difference though, leave it as is. ?

Ixaris - May 19, 2014, 7:14 am

Great Observation :P

It wasn't so required but yeah! Let it be.

Autonomous - May 19, 2014, 7:59 am

Great find sir! I noticed it too, but i didn't think it was enough to post about :P

Isildur - May 19, 2014, 11:29 pm

Oh yea... I just noticed it somehow, hehe.

And yes, it ain't a big deal, but who knows:

10000 unique Visits Per day on pages other than index uses = 8kb x 10000 = 80000KB = 80 MB....

Just a guess.... IDK if we get more than 10000 or less than that.

Omniscient - May 20, 2014, 1:00 am

Fixed. Thanks for reporting. I'm a stickler when it comes to that stuff.

Thought the same about you, "stickler". ?

?

Well, it seems as if you're suggestion has been added. There is no longer a need for this thread.
