Thread: [Help with AutoSmelter Hopper's not puting items in chests?](#)

Lime Whips - May 19, 2014, 6:38 am

So I just tried to make a 15 furnace auto smelter from this video:

<https://www.youtube.com/watch?v=acKnjrKSqzI>

but the problem is that the hoppers that are supposed to put the fuel and items in the smelters aren't fully delivering the items it goes a little ways then the items just get stuck. here's some pictures and my world DL

From what I can see, the hoppers are pointed towards the sides of the chest. They have to go in through the top.

so should I just move all those hoppers on top the chests or would that screw up the whole design?
